

Carbon Reduction Plan

Supplier name: Rackline Limited

Publication date: 10/06/2025

Commitment to achieving Net Zero

Rackline Limited is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: April 2023 – March 2024	
Additional Details relating to the Baseline Emissions calculations.	
The baseline calculations were determined by gathering relevant environmental monitoring statistics from specific sources, including gas and electricity bills for this period, as well as vehicle emissions. All of which has supported our UKAS accredited 14001:2015 Environmental Management System certification.	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	57.5
Scope 2	311.3
Scope 3 (Included Sources)	2610
Total Emissions	2980

Current Emissions Reporting

Reporting Year: Apr 2024 – March 2025	
EMISSIONS	TOTAL (tCO ₂ e)
Scope 1	57.10
Scope 2	289.46
Scope 3	2366.49
Total Emissions	2713.05

Emissions reduction targets

Rackline LTD has committed to net zero by 2050.

As our understanding grows, our procedures for capturing more meaningful data has improved. As a result, we have amended our baseline data to the reported 2023/24 which incorporates Scope 3 data.

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

Our projected decrease to scope 1 and 2 categories to below 200 tCO₂e by 2030 is on target. This is equates to an annual reduction of 16.5% from baseline year.

Scope 3 remain the hardest to tackle. We will continue to work closely with our supply chain in order to accurately calculate our scope 3 emissions and to further identify carbon reduction opportunities within the supply chain, as well as emissions that we can directly control. Target annual reduction of 90 tCO₂e.

Progress against these targets can be seen in the graph below:

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since monitoring began. The carbon emission reduction anticipated by these schemes equate to 115 tCO₂e, a 4% reduction against the 2024/25 baseline and the measures will be in effect when performing the contract.

The following carbon reduction initiatives have been implemented since the original baseline include:

- Maintaining UKAS accredited ISO 14001:2015 certification
- Significant investment in new plant and equipment – improving the energy efficiency of our operational processes.
- Stage replacement of existing lighting to new LED's
- Investment in transitioning company vehicles to EV and Hybrid.
- Staff training for environmental awareness, recycling, turn it off initiatives.
- Engage with a new waste management company to reduce waste entering landfill.
- Partial replacement of roof increasing heating efficiencies.

Future Carbon Reduction initiatives include:

- Continue with the staged replacements to LED lighting throughout.
- Engage further with our supply chain in order to establish accurate scope 3 emissions reporting. Communicating our CRP and ensuring best practise within our supply chain.
- To procure 100% renewable energy from our gas and electricity supplier
- Long term objective to replace company vehicles with full EV.
- Quarterly reporting of Carbon reduction KPI's using Carbon Footprint Calculations.
- Highlighting to customers service plans for existing products ensuring maximum life cycle of products.
- Continued refurbishment / replacement of building roof.

Declaration and Sign Off

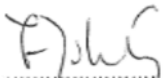

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse gas company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of Rackline LTD

Mr F. Doherty
Managing Director
