All figures as of December 2024, except otherwise stated. Differences may arise due to rounding

To continue building, every day and in collaboration, a more electric, healthier and accessible energy model

A real and global energy transition

- ✓ Boosting decarbonisation and electrification of the energy sector, and the economy as a whole
- ✓ Contributing to the fight against climate change
- ✓ Generating new opportunities for economic, social and environmental development

An energy model that is more electric...

- ✓ Abandoning fossil fuels
- ✓ Generalising renewable energy sources, the efficient energy storage, smart grids and digitalisation

...healthier for people

- ✓ Being aware that short-term health and well-being of people depends on the environmental quality of their surroundings

...more accessible for all

- ✓ Creating a society that favours inclusion, equality, equity and development

...contributing to the security of supply

- ✓ In collaboration with all agents involved and with society as a whole
- ✓ Which provides safe, competitive and autonomous energy and electricity

Focused on the well-being of people and the preservation of the planet

Iberdrola Group: Total Shareholder Return

Iberdrola Total Shareholder Return⁽¹⁾ over the last 10 years is above 300%...

... based on higher growth than peers

(1) Total Shareholder Return, including dividend reinvestment for the period between December 2014 and April 2025
(2) Arithmetic average of European Utilities (Enel, EDP, RWE, Engie, E.ON)
(3) Arithmetic average of APAC Utilities (China Yangtze Power, Huaneng Power International, China Longyuan Power Group Corp, KEPCO, TEPCO, Kansai, Chubu, Origin Energy, APA Group, Meridian Energy, Infantil Limited, Mercury NZ)
(4) Arithmetic average of American Utilities (NextEra Energy, Southern Co, Duke Energy)

Iberdrola Group: Earnings growth and shareholder's return

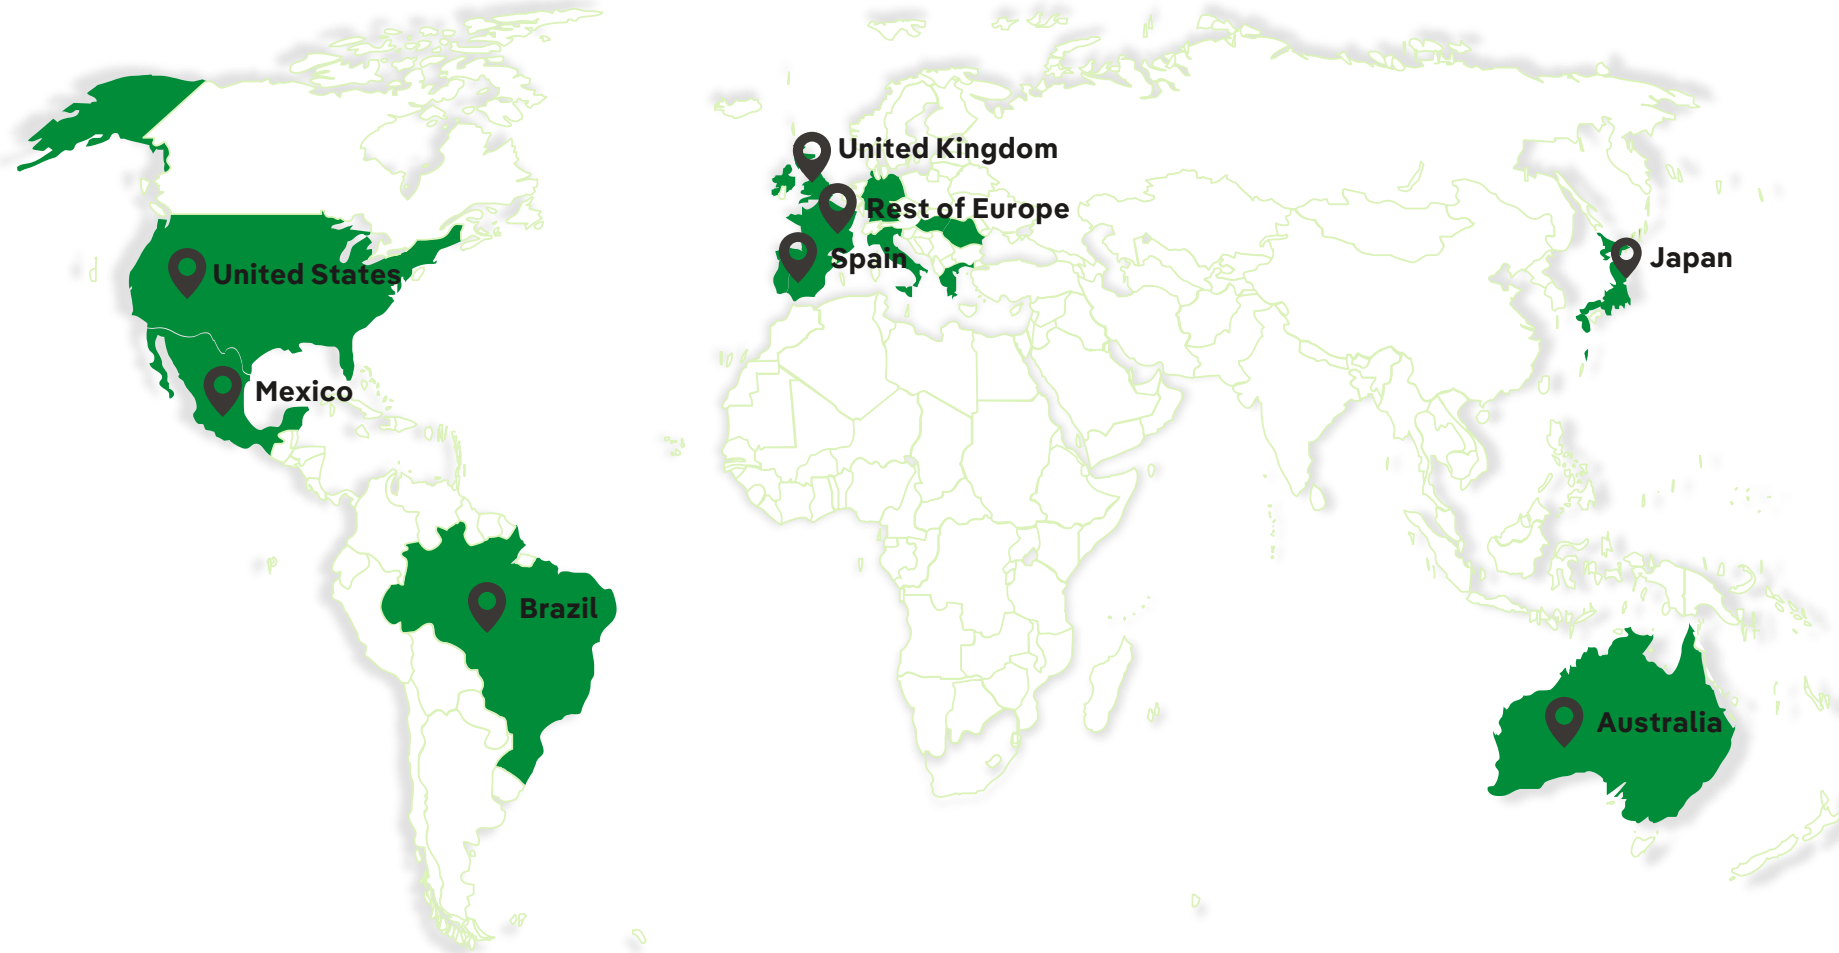

Shareholder remuneration aligned with Net Profit (and EPS) growth

Source: Bloomberg

(1) Calculated as standard deviation of Net Profit growth during the last 10 years

Iberdrola is a global energy leader in clean energy, networks and storage...

... serving ~100 M people in dozens of countries, with more than 42,200 employees and ~160 Bn Eur of assets

... and one of the world's largest electricity companies by market capitalization, ...

Total Assets (M EUR)

EBITDA (M EUR)

Net Profit (M EUR)

Net Own Production (GWh)

Distributed Electricity (GWh)

Customers (millions)⁽¹⁾

(1) Consumers: for electricity, total number of customers is used where there are areas of electricity distribution and retailing, supply points are used for the other areas.

(2) For gas: total number of gas customers is used, except for the U.S., where supply points are used. For Rest of the World, electricity and gas segment depends on Iberdrola Clientes Internacional S.A

...having anticipated the energy transition to combat climate change and contributing to society

Own emission-free installed capacity (%)

Own specific CO2 emissions (t / GWh)

Water use / overall production (m3/GWh)

Number of employees ⁽¹⁾

Accident frequency rate (own employees)⁽²⁾

Purchases from sustainable suppliers (%)

(1) Refers to number of employees at year-end regardless of the type of working hours.

(2) Rate of recordable work-related injuries = Number of recordable work-related injuries (except first aid) / Number of hours worked x 1,000,000.

The group's competitive business model creates value in the places where the company operates...

Key performance indicators 2024

€11,946 million gross organic investment
€5,612 million net profit

~45,400 million asset base in networks
+2,600 MW of renewable capacity installed

€17,853 million of purchases from suppliers
>€400 million of investment in R&D for 3rd consecutive year²

42,246 employees³
43% of women in the Board of Directors

38 g CO₂/kWh emissions in Europe (5 times less vs European average)
c.84% own emission-free installed capacity

€56.7 million of contributions to society
36 million customers

(1) Inorganic investment (Electricity North West + Avangrid + Other) amounts to 4,933 M EUR, totaling 16,869 M EUR

(2) According to the European Commission based on 2023 figures

(3) Number of employees at year-end, regardless of the type of workday

...through clean energy generation, smart grids and smart solutions and services to our customers

2024 Gross Investments by business

2024 Gross Investments by geography

International diversification
~83% in countries with credit rating ≥ A⁽²⁾

(1) Total gross organic investments. Considering inorganic investments (ENW + Avangrid + Other), total investment is 16,879 M EUR

(2) Under Standard & Poor's categorization

1.3 M Km power lines, over 4,500 substations and 1.6 M transformers and over 35 M supply points⁽²⁾

Asset Base

Iberdrola Networks business areas

| | Spain | UK | USA | Brazil |
|----------------------------|-------|----|-----|--------|
| Transmission - electricity | | ✓ | ✓ | ✓ |
| Distribution - electricity | ✓ | ✓ | ✓ | ✓ |
| Distribution - gas | | | ✓ | |

Leaders in smart grids

| Country | Smart meters Installed (M) | % Smart meters/ Total meters |
|----------------|----------------------------|------------------------------|
| Spain | 11.5 | ~100% |
| United Kingdom | 2.6 | ~62% |
| United States | 2.3 | ~65% |
| Brazil | 0.6 | ~4% |

As of 2024, out of the total meters installed, ~85% are smart meters⁽³⁾

(1) Does not include ENW RAB (2.9 M GBP), as the asset is not consolidated by the global method until April, 2025

(2) Electricity and gas supply points

(3) Figure excludes Brazilian meters. Including it, 50% of the meters are smart

Stable and geographically diversified returns approved through regulatory frameworks

Note: Rounded figures and best estimate of the entry into force of the new rate cases

(1) Nominal WACC pre-tax has been calculated based on each country's specific remuneration framework. Distribution: ESP: 5.6% Nominal WACC pre-tax; UK: 5.6% Real CoE post-tax; USA: Nominal ROE post-tax allowed for each DisCo; BRA: 7.4% Real WACC post-tax. Transmission: UK: 5,2% Real CoE post-tax; USA: Nominal ROE post-tax allowed for each licence ~11%. Inflation (long term): UK: ~ 2%; BR: ~ 3,0%

(2) Rates automatically extended

Leading position in renewables

Capacity by region

Capacity by technology

Note: net owned installed capacity. Differences may arise due to rounding
(1) Including 13 MW of capacity from fuel cells

Leading position in renewables

Output by region

Output by technology

Note: net owned production. Differences may arise due to rounding
 (1) Including 72 GWh of production from fuel cells

Iberdrola Group: Electricity Production & Customers

Group's Total Installed Capacity

| Capacity (MW) | Spain | UK | US | Mexico | Brazil | RoW | Total |
|--|-----------------------|--------------|---------------|--------------|--------------|--------------|-----------------------------|
| Renewables⁽¹⁾ | 22,582 | 2,996 | 9,703 | 1,232 | 3,862 | 4,102 | 44,478⁽¹⁾ |
| Onshore (owned) | 6,550 | 1,968 | 8,045 | 590 | 1,554 | 2,041 | 20,747 |
| Onshore (for third parties) | - | - | - | - | - | - | - |
| Offshore | - | 908 | 143 | - | - | 1,322 | 2,373 |
| Hydro | 10,823 ⁽²⁾ | - | 118 | - | 2,159 | - | 13,100 |
| Mini-hydro | 234 | - | - | - | - | - | 234 |
| Solar | 4,937 | 19 | 1,384 | 643 | 149 | 665 | 7,796 |

| Gas Combined Cycle capacity for third parties | - | - | - | - | - | - | - |
| Cogeneration | 318 | - | 636 | 202 | - | - | 1,156 |
| TOTAL CAPACITY | 31,772 | 2,996 | 10,543 | 2,600 | 4,412 | 4,345 | 56,668 |

Note: Figures reported net of transactions during the period. Differences may arise due to rounding.

(1) Including 13 MW of capacity from fuel cells

(2) Includes capacity of Tâmega in Portugal

Iberdrola Group: Electricity Production & Customers

Group's Total Production

| Production (GWh) | Spain | UK | US | Mexico | Brazil | RoW | Total |
|--|-----------------------|--------------|---------------|----------------------------|---------------|--------------|-----------------------------|
| Renewables⁽¹⁾ | 33,363 | 7,279 | 20,897 | 2,747 | 11,137 | 7,916 | 83,338⁽¹⁾ |
| Onshore (owned) | 9,626 | 4,081 | 19,294 | 1,579 | 5,339 | 4,611 | 44,530 |
| Onshore (for third parties) | - | - | - | 44 | - | - | 44 |
| Offshore | - | 3,190 | 39 | - | - | 2,593 | 5,822 |
| Hydro | 20,159 ⁽²⁾ | - | 211 | - | 5,551 | - | 25,920 |
| Mini-hydro | 429 | - | - | - | - | - | 429 |
| Solar | 3,150 | 8 | 1,280 | 1,124 | 247 | 711 | 6,520 |
| Batteries | - | - | 72 | - | - | - | 72 |
| Nuclear | 22,589 | - | - | - | - | - | 22,589 |
| Gas Combined Cycle owned production | 4,449 | - | 5 | 8,890 | 87 | 121 | 13,551 |
| Gas Combined Cycle production for third parties | - | - | - | 6,111⁽³⁾ | - | - | 6,111 |
| Cogeneration | 1,638 | - | 3,884 | 1,388 | - | - | 6,910 |
| TOTAL PRODUCTION | 62,039 | 7,279 | 24,785 | 19,135 | 11,224 | 8,036 | 132,499 |

Note: Figures reported net of transactions during the period. Differences may arise due to rounding.

(1) Including 72 GWh of production from fuel cells

(2) Includes production of Támeiga in Portugal

(3) Includes production of assets within the transaction perimeter up to the 26th of February 2024

Iberdrola Group: Electricity Production & Customers

Renewables load factor

| Load Factor (%) | Spain | UK | US | Mexico | Brazil | RoW |
|------------------------------------|-------|----------------------|-------|--------|--------|----------------------|
| Onshore (owned) | 17.0% | 25.0% | 27.3% | 30.3% | 39.1% | 25.9% |
| Onshore (for third parties) | - | | | 29.3% | | |
| Offshore | - | 49.0% ⁽²⁾ | | | | 26.5% ⁽³⁾ |
| Hydro⁽¹⁾ | 21.3% | | | | 36.1% | |
| Mini-hydro⁽¹⁾ | 20.8% | | | | | |
| Solar | 11.9% | 5.7% | 18.7% | 27.9% | 18.9% | 17.3% |

Note: load factor calculated using installed capacity and AOC (Average Operating Capacity)

(1) Based on consolidated production and operational capacity

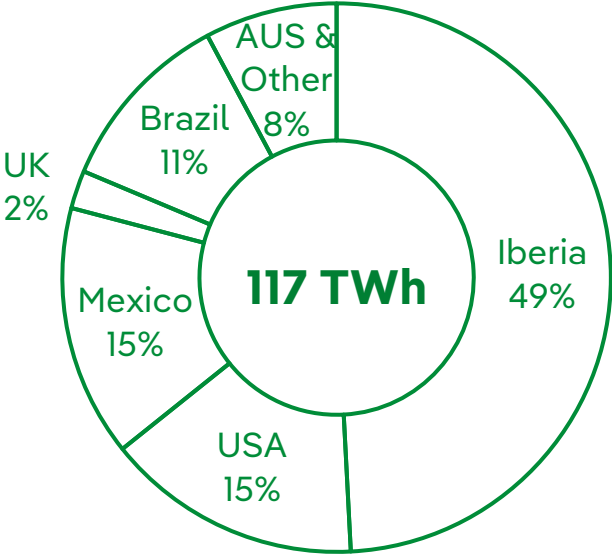

(2) Adjusted for the outage due to EA1 wind farm cable fault

(3) Due to gradual entry into operation of Baltic Eagle wind farm

Iberdrola Group: Electricity Production & Customers

Mid and long term secured contracted margins in all regions through diversified route-to-market...

Available production for sales (TWh)

Route to Market by production (TWh)

... and in 2024 we reached 117 TWh of contracted revenues with margin secured

O&M Management

- **USA** is the region that concentrates more in-house maintenance, while **Spain** concentrates the maintenance with **ISP**
- To highlight the **ISP** maintenance of the total **G8X-G9X** fleet in Brazil & the **internalization of works** in Mexico.

(1) Refers to commissioned capacity

Note: excluding capacity not consolidated at EBITDA level

- **External** maintenance model **predominates**, followed by a tendency to **increase internal** maintenance as the equipment comes **out of warranty**
- It is worth mentioning the **In-house** maintenance of **FIMER** inverters in Spain

Iberdrola Group: Electricity Production & Customers

Retail & Smart Solutions: Key figures 2024

32 M⁽¹⁾ services to customers

MEXICO⁽²⁾

4k services to customers
17 TWh energy sales

BRAZIL

818k services to customers
13 TWh energy sales

UK

7 M services to customers
30 TWh energy sales⁽²⁾

SPAIN & EU

23 M services to customers
88 TWh energy sales

Note: includes electricity and gas sales supplied to customers

(1) Discrepancies may occur due to rounding

(2) Excludes energy of CCGT sold to MIP as of 26th February 2024

Iberdrola Group: Electricity Production & Customers

Services to customers: >31.5 M contracts

(In '000)

| | 2024 | 2023 | Var. (%) |
|---|---------------|---------------|--------------|
| Iberia | 23,336 | 22,395 | 4.2% |
| Liberalised | 19,903 | 18,986 | 4.8% |
| Electricity | 7,521 | 7,669 | -1.9% |
| Gas | 641 | 654 | -2.0% |
| Smart solutions | 11,741 | 10,663 | 10.1% |
| Last resort tariff⁽¹⁾ | 3,433 | 3,410 | 0.7% |
| UK | 7,343 | 7,267 | 1.0% |
| Electricity | 2,539 | 2,680 | -5.3% |
| Gas | 1,771 | 1,829 | -3.2% |
| Smart Solutions | 320 | 274 | 16.8% |
| Smart Meters | 2,713 | 2,484 | 9.2% |
| Mexico | 4 | 4 | - |
| Brazil | 818 | 695 | 17.7% |
| Electricity ⁽²⁾ | 2,0 | 1,4 | 40.8% |
| Smart Solutions ⁽³⁾ | 816 | 694 | 17.6% |
| Rest of World | 0,03 | 0,03 | - |
| Electricity | 0,03 | 0,03 | - |
| TOTAL | 31,502 | 30,362 | 3.8% |

(1) Refers to customers under the PVPC (regulated power tariff) and TUR (regulated gas tariff)

(2) Number of consumer units

(3) Excluding philanthropic clients

Note: Iberia includes Spain & Portugal and Rest of World includes France, Germany & Italy

Smart Solutions to solve customer needs

- Comprehensive solutions that meet our customer needs
- Strengthen customer relationship with Iberdrola
- Accelerate electrification of demand
- Promote sustainable technologies

SMART HOME VALUE-ADDED SERVICES

- Reached 13.2M services in the global value-added services portfolio
- Wide offer of added value services and energy management that provide peace of mind and comfort and enable customers to save and optimize their energy consumption.
- Launching of new solutions to drive demand electrification and allow a customized home energy management

SMART MOBILITY ELECTRIFICATION OF TRANSPORT

- Alliance with more than 10 vehicle manufacturers which cover 60% of EV Sales in Spain
- >19k public charging points and 53k residential in 2024
- Launch of the Iberdrola | BP Pulse joint venture to lead the fast and ultrafast charging infrastructure deployment in Spain and Portugal
- Contracts secured for installation of charging infrastructure for +670 buses and trucks..

SMART SOLAR SELF-SUPPLY SOLUTIONS

- Leading self-consumption in Spain and consolidating presence in other countries
- We offer comprehensive solutions for all customers: single-family homes, solar communities, companies and industrial customers.
- Continuing the deployment of solar communities to make self-consumption accessible to all customers neighbours in the vicinity

SMART CLIMA ELECTRIFICATION OF HEAT

- Promotion of heat electrification and energy rehabilitation in homes
- Development of the business line of integral energy refurbishment of residential buildings
- Integrated turnkey solutions: installation, maintenance and electricity tariffs adapted to each client

Other electrification solutions

DATA CENTERS

Green energy in need of firming

- ✓ Iberdrola: **~11 TWh** contracted in USA, Spain, Germany, United Kingdom...
- ✓ Alliances with the **main energy consumers** for Data Centers

DISTRICT HEATING

Areas of high population density and low temperature

- ✓ **Pioneers in Project Development** in **Spain**: 1 project in operation in 2025
- ✓ **Pipeline** of **~40 projects (4 TWh)** promoting industry residual heat recovery specially from data centers.

PPAs: long-term Power Purchase Agreements

- A PPA is a long-term Power Purchase Agreement, with agreed conditions (term, price, amount, etc.) between an energy generator and a consumer that ensures revenue and price stability for the customer.
- In a market with highly volatile prices, PPAs set a price that totally or partially limits this risk.
- Iberdrola group has signed contracts of this type in countries such as the United States, the United Kingdom, Spain, Mexico, Brazil, Australia, Italy, Germany...

DEPENDING ON THE POINT OF INJECTION OF ENERGY

OFFSITE PPA

Energy produced at a specific location and connected to the grid

ONSITE PPA

Energy produced near or on the site of the customer's premises

DEPENDING ON THE TYPE OF DELIVERY

PHYSICAL

Bilateral contract for the supply of energy and, for renewable generation, delivery of Renewable Certificates from a specific production plant to the end customer

VIRTUAL

Bilateral energy contract that does not provide for the physical delivery of energy from the seller to the customer

BY FORM OF ENERGY DELIVERY

AS GENERATED

The customer consumes the plant's generation

BASELOAD

The seller is responsible for converting the generation of the asset into a baseload

Iberdrola Group: Electricity Production & Customers

Flagship projects: Main PPAs⁽¹⁾ signed by Iberdrola in 2024

SPAIN

Offshore: increasing additional growth opportunities for 2028 – 2030...

Mature Projects

Happo – Noshiro (375 MW): Site secured and working in Route to Market. Iberdrola's stake is 39.9%.

East Anglia 1N (up to 900 MW): fully consented project creating synergies in the UK Hub

New England 1 (791 MW) & 2 (1,080 MW): all necessary federal permits obtained from BOEM, plus other permits required for construction

Seabed rights for additional growth

ScotWind:

- 5 GW floating offshore projects in JV with Shell (50/50)
- 2 GW fixed project

Kitty Hawk South: 2.4 GW off the coasts of Virginia and North Carolina

Aurora Green: obtained preliminary authorization to develop our first offshore wind farm in Australia

...through established support mechanisms

| | | Offshore Country Targets (GW) | Support Mechanisms |
|---|------------------|---|-----------------------------------|
|  | UK | 43-50 GW by 2030 | CfD |
|  | Scotland | 11 GW by 2030 ⁽¹⁾ | CfD |
|  | USA | 30 GW by 2030 | Utility or Corporate PPA |
|  | France | 18 GW by 2035, 26 GW by 2040, 45 GW by 2050 | CfD |
|  | Germany | 30 GW by 2030, 40 GW by 2035 | Variable premium/corporate PPA |
|  | Australia | 2 GW by 2032, 4 GW by 2035 | CfD |
|  | Japan | 10 GW by 2030, 30-45 by 2040 | FIT but moving to Feed in Premium |

(1) Climate Change Committee has advised capacity should more than triple; from 15GW in 2023 to 49GW by 2035 and 66GW by 2045. Draft Climate Change Plan (CCP) to come to Scottish Parliament in summer 2025 and expected to finish before the 2026 Scottish Parliament election.

Green hydrogen & industrial electrification projects

| Operational | | | Capacity | Funds |
|--------------------|---|--|----------|----------------|
| H ₂ |  Puertollano I | | 20 MW | Awarded |
| H ₂ |  Barcelona | | 2,5 MW | Awarded |
| H ₂ |  Benicarló | | 1,25 MW | - |
| Under construction | | | Capacity | Funds |
| H ₂ |  Castellón | | 25 MW | Awarded |
| Thermal Storage |  Langreo | | 13 MWe | Awarded |
| Mature projects | | | Capacity | Funds |
| H ₂ |  Cromarty | | 15 MW | Awarded |
| H ₂ |  Whitelee | | 10 MW | Awarded |
| H ₂ |  Methanol Green Meiga | | 150 MW | Awarded |
| H ₂ |  Palos | | 200 MW | - |
| Thermal Storage |  Tarragona | | 150 MWe | Awarded |
| Electric boiler |  Cartagena | | 33 MWe | - |

In addition, **strong portfolio of opportunities worldwide** that can **increase decarbonization** and **electrification** of the industry with **up to 11 TWh**

8 green H2 and derivatives projects in **Iberia, UK, Australia and Brazil** as well as 15 **industrial electrification** projects

Iberdrola overview of flexible assets

Flexible green production and energy storage as key differentiators with the focus on customers needs

Iberdrola has a significant operational portfolio of firming capacity assets...

Already operational assets

... and a competitive pipeline of Pumped Hydro (PHS) + Batteries (BESS) of more than 15GW

Underpinned by operating assets, hybridization opportunities and greenfield portfolio

Pumped Hydro Storage: Operating assets & pipeline

PHS is concentrated at Iberia, thanks to its orography and possibility of developing brownfield projects

| | Installed Capacity (MW) | Storage Capacity (GWh) |
|----------------------|-------------------------|------------------------|
| Operating assets | 4.400 | 100 |
| Commissioned on 2024 | 118 | 2 |
| Under construction | 290 | 15 |
| TOTAL | 4.7 GW | 117 GWh |

Equivalent to ~2 M electric vehicle (EV) storage capacity

Projects Under Permitting

+3.6 GW

+155 GWh

FLAGSHIP PROJECTS

Támega

Largest hydroelectric facility in Portugal
880 MW close-loop PHS / 20 GWh

La Muela

Largest pumping facility in Europe
1,512 MW close-loop PHS / 24 GWh

Pumped hydro: the most competitive technology to provide massive flexibility

Only available in certain jurisdictions (Spain & Portugal)

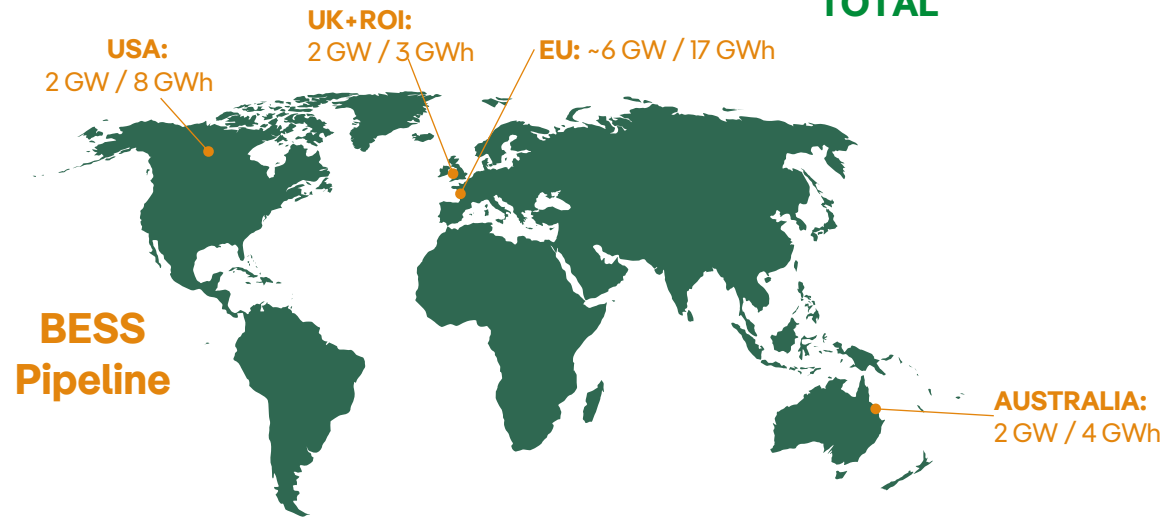

Batteries to accommodate Clients – Renewables deployment

200 MW of operating BESS assets, 500 MW under construction / advanced development ...

... and a portfolio of ~12 GW (33 GWh) of BESS projects focused on core markets

| REGION | Operating assets (MW) | Under construction/ advanced development (MW) |
|--------------|--------------------------|---|
| Australia | 75 | 245 |
| UK + Ireland | 101 | 0 |
| Spain | 39 | 150 |
| TOTAL | 0.2 GW | 0.5 GW |

| REGION | PIPELINE (GW) |
|--------------|------------------|

All figures as of December 2024, except otherwise stated. Differences may arise due to rounding

Leading energy company

| | |
|------------------------------|---------|
| Installed Capacity (MW) | 31,772 |
| Renewable Capacity (MW) | 22,582 |
| Net Production (GWh) | 62,039 |
| Distributed Energy (GWh) | 89,060 |
| Customers (M) ⁽³⁾ | 11.2 |
| Km of lines | 266,913 |

(1) The data on hydroelectric power plants include the Daivoes, Gouvaes and Alto Tâmega power plants in Portugal, although they visually appear on the Iberdrola Energía Internacional map

(2) Includes both projects under construction and projects with a positive decision to start construction (positive FID)

(3) Total number of electricity and gas customers.

As of December 2024, ~11.5 M smart meters installed and digitalization of ~100,000 secondary substations

| | 2024 |
|--------------------------|---------|
| RAB (Bn EUR) | 9.3 |
| Distributed energy (GWh) | 89,060 |
| Points of supply (M) | 11.5 |
| Kms of lines (M) | 266,913 |

Distribution: Circular 6/2019 CNMC. Regulatory period: 2020-2025

- **Remuneration calculated by WACC methodology and reviewed every 6 years (regulatory period): 6.003% (before taxes) in 2020 and 5.58% (before taxes) from 2021 onwards.** Until 31 December 2019 the remuneration was linked to 10 Year-Treasury Bond, adding 200 bps on top of it, and reaching 6.5% of financial remuneration rate.
- **The remuneration has four components:**
 - Remuneration of net regulatory asset value (CAPEX):** It maintains the regulatory asset (RAB) of investments made until 2018.
 - Remuneration of **existing assets on 31 December 2014** calculated according to Royal Decree 1048/2013 (Standard Costs (SC) are the reference for calculating regulatory assets):
 - Standard Costs corrected by a coefficient per company
 - Ceded assets are subtracted (assets prior to 1998 are estimated)
 - Assets are remunerated during their regulatory useful life (depending on accountability by company)
 - **Assets in operation since 1 January 2015 until 31 December 2018**
 - Standard Costs for those assets with standard costs while audited costs for the remaining
 - Assets are remunerated during their useful life (40 years for network assets and 12 for control systems)
 - **New assets in operation since 1 January 2019:** audited cost per installation
 - Remuneration of Manageable Component (OPEX):**
 - **O&M and “Other assets investments”** (systems not associated with digitalization, machinery, vehicles, buildings and tools): This term evolves according to the increase in remuneration for investment in electricity assets and with an adjustment factor, which takes the value of 0.97 per year, with the aim of bringing it closer to the real cost of the companies.
 - **Efficiencies:** companies can retain 100% of the efficiency gains obtained from the OPEX additional to the previous adjustment factor
 - Other regulated tasks:** reading, contracting, defaults, invoicing, customer service channels, planning and structure... according to Standard Costs and public domain use tax -7% compared to the previous regulatory period
 - Incentives:**
 - Quality and losses reduction: Each company will have bonuses or penalties, so that the whole is a "zero-sum". In the case of the loss incentive, a 2-year moratorium is proposed to analyse a possible zoning of the networks.
 - Fight against fraud: according to detected fraud. Eliminated from 2022 onwards
 - Annual maximum investment limit established by Government:** Royal Decree 1048/2013 limits the annual volume of investment in the electricity distribution network to 0.13% of Spain's GDP (Iberdrola's market share is c.31,5% as of 2022 and the PIB considered for the calculation is 1,312 M EUR, see source [here](#))

Resolution of November 28, 2024 CNMC - Global Ratios Index 2025

- The Global Ratios Index is used to assess the **level of indebtedness** and the economic-financial capacity of the companies that carry out regulated activities and their recommended ranges. In this sense, the principle of financial prudence is materialized in an economic penalty for those licensees that present a **Global Ratio Index value lower than 0.90**.
- The value of the Global Ratio Index (RGR) is calculated from the values obtained for the **5 financial ratios** defined in the Order “Comunicación 1/2019, de 23 de octubre” according to a defined formula contained in the aforementioned Order.
- The resolution of November 28, 2024 establishes the value of the **2025 global ratio index** and the penalty related to the financial prudence of companies that carry out the activities of transmission and distribution of electricity and the activities of transmission, regasification, underground storage and distribution of natural gas.
- The formula to calculate the index is the following:

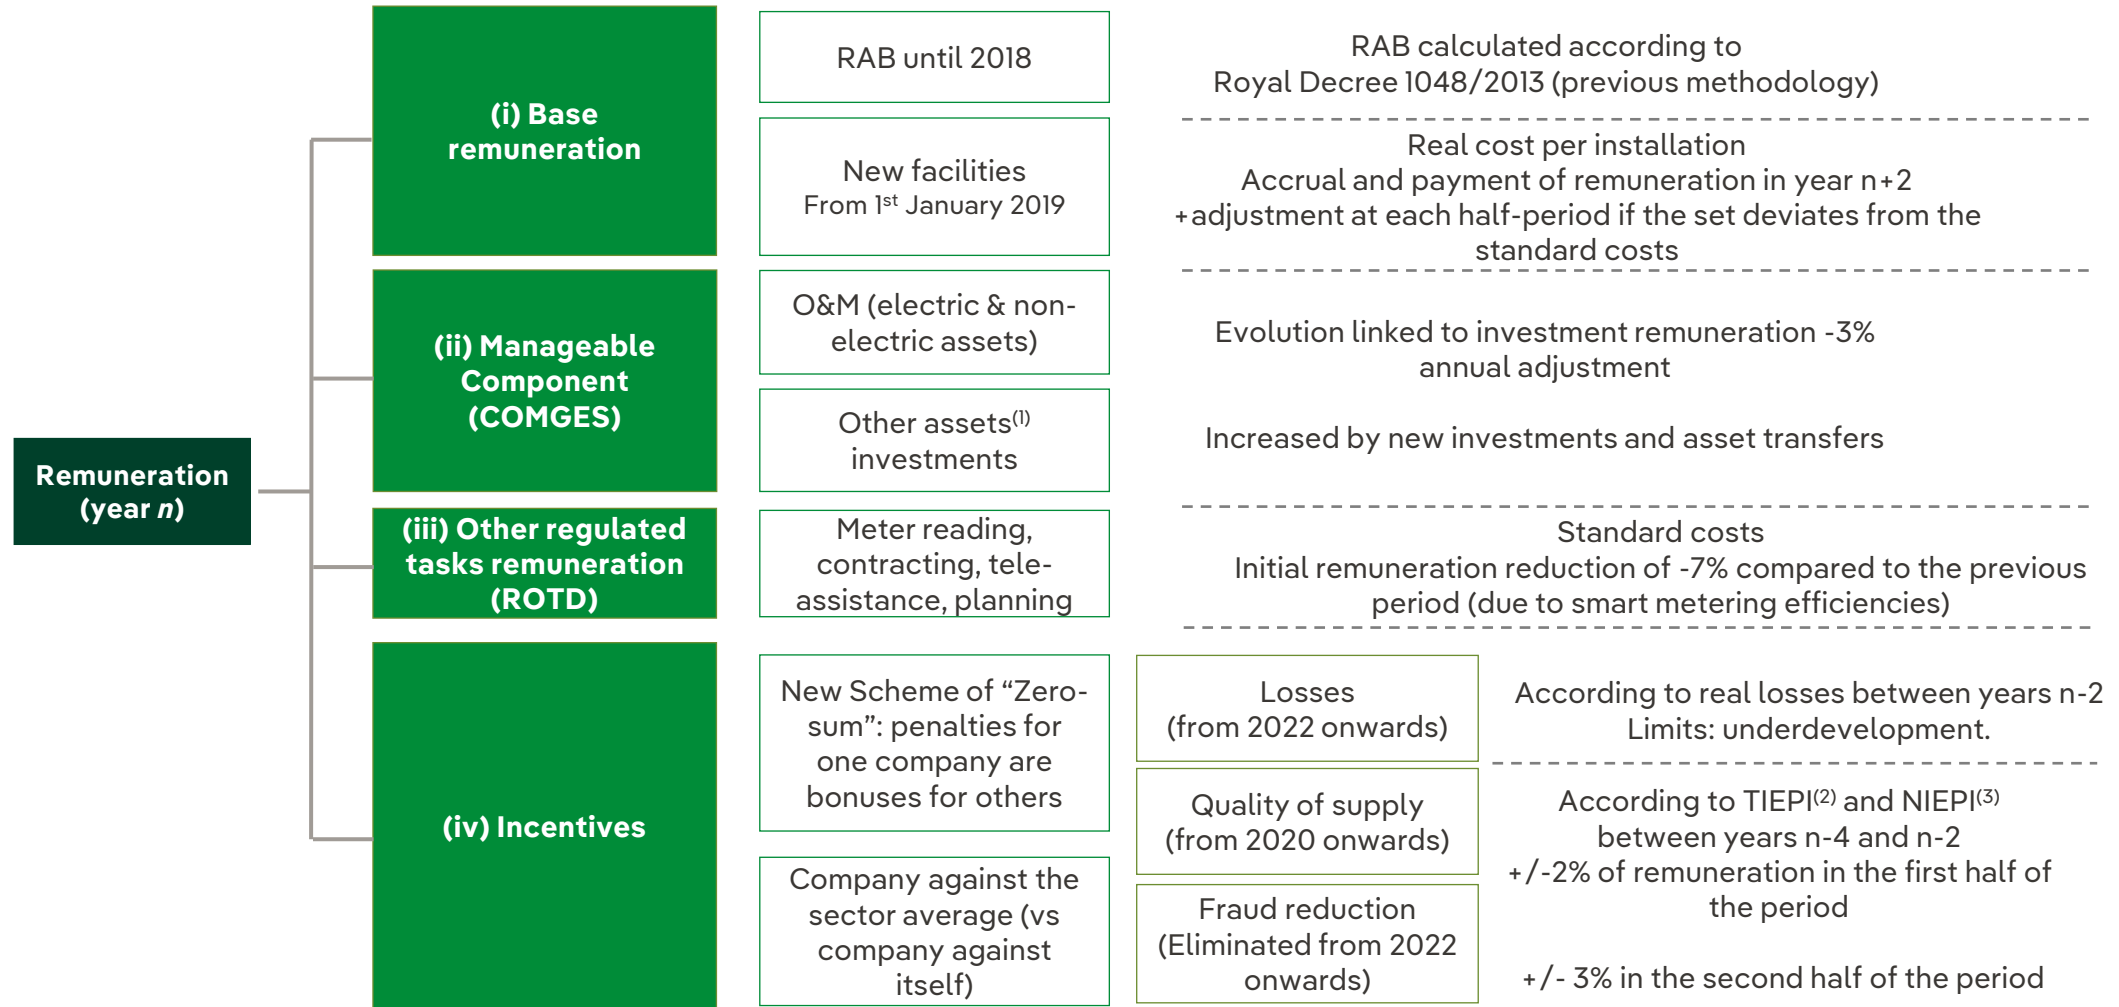

$$IGR = 0,1 \times R1 + 0,05 \times R2 + 0,3 \times R3 + 0,2 \times R4 + 0,35 \times R5$$

where R_i will be 1 when the ratio calculated for the company is within the recommended range as established in chapter 5 of the order “Comunicación 1/2019”, and R_i will be 0 when the aforementioned ratio is out of the recommended range

- The ratio per company is in the following table:

| Empresas por actividad principal | Ratio 1 | R1 | Ratio 2 | R2 | Ratio 3 | R3 | Ratio 4 | R4 | Ratio 5 | R5 | IGR ₂₀₂₅ |
|--|---------|----|---------|----|---------|----|---------|----|---------|----|---------------------|
| <i>Transporte de energía eléctrica</i> | | | | | | | | | | | |
| Red Eléctrica de España, SAU. | 59 % | 1 | 19,9 | 1 | ≤ 70 % | 1 | 4,5 | 1 | 6,0 | 1 | 1 |
| <i>Distribución de energía eléctrica</i> | | | | | | | | | | | |
| i-DE Redes Eléctricas Inteligentes, SAU. | 50 % | 1 | 13,0 | 1 | ≤ 70 % | 1 | 4,0 | 1 | 6,3 | 1 | 1 |

Iberdrola España: Electricity Production & Customers

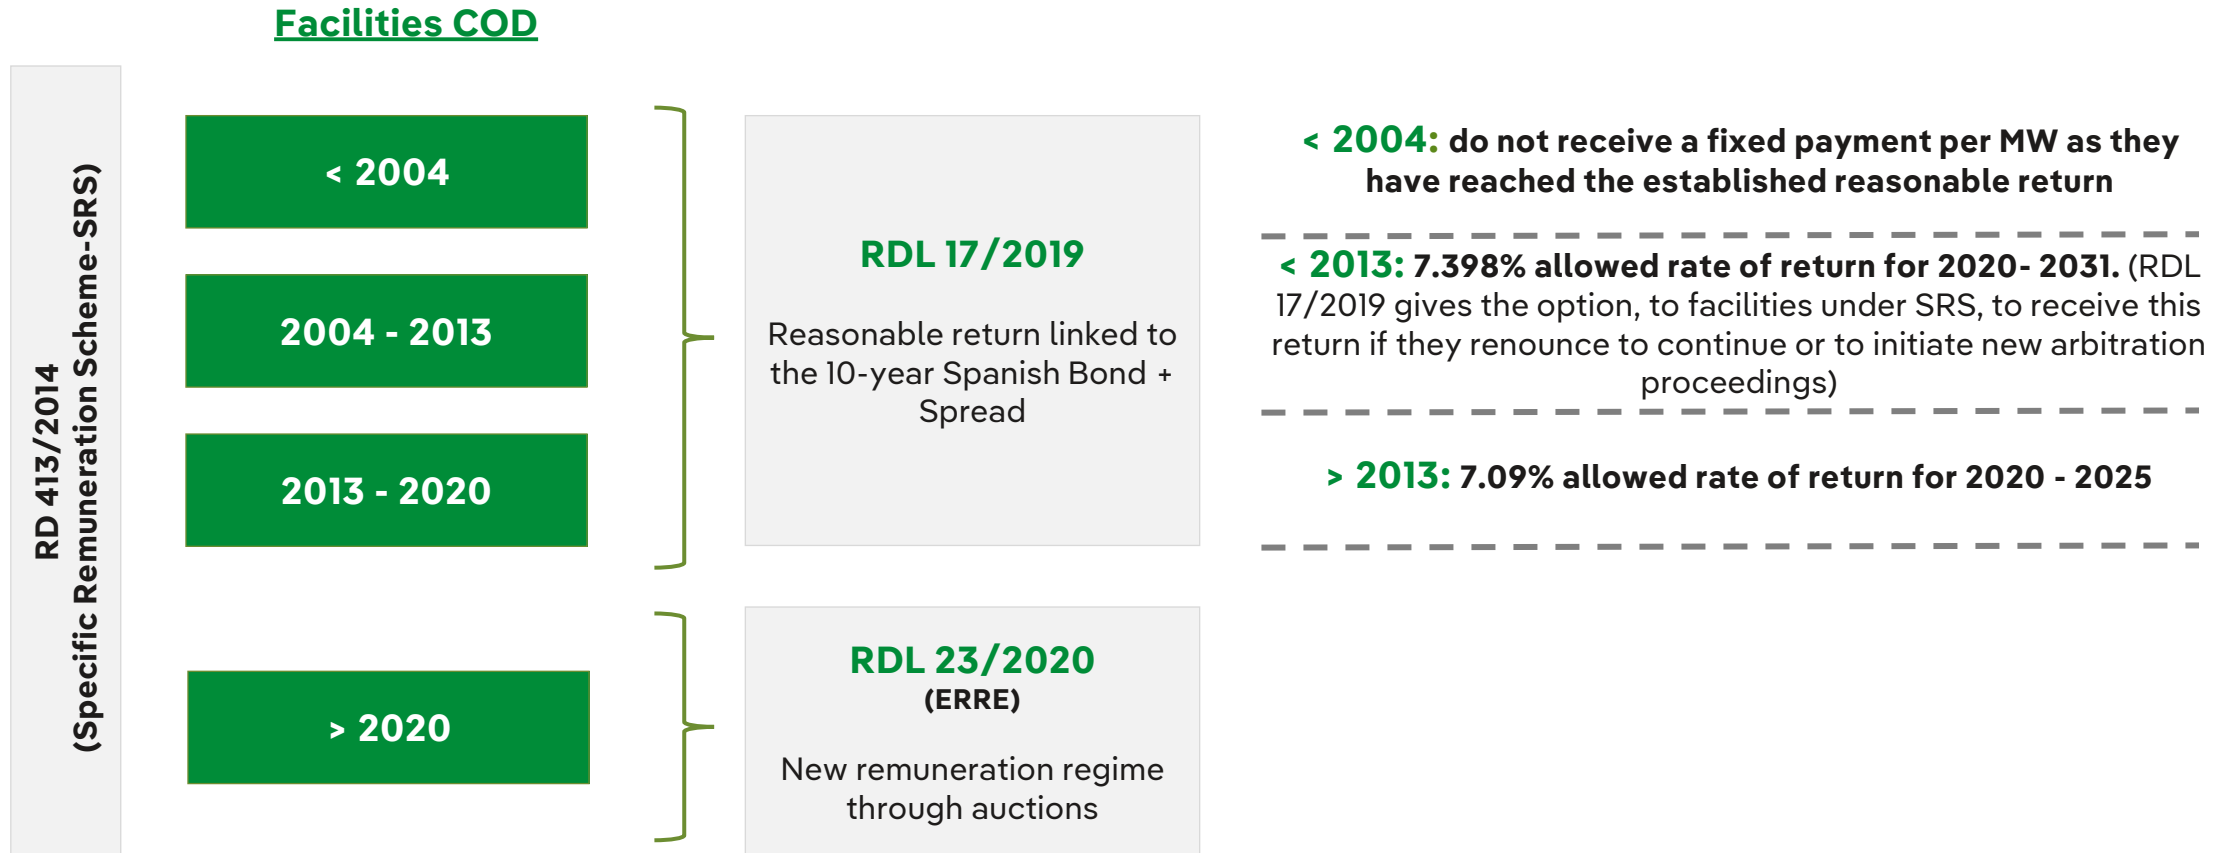

Basis for remuneration model: Law 24/2013⁽¹⁾

(1) Applicable to all technologies

Regulatory framework for wind and solar

- One of the possibilities to develop new projects is to adhere to the regulatory framework explained below.
- The Specific Remuneration Scheme (SRS) established by RD 413/2014 is still in force for all renewables. In addition, in parallel, the **New Economic Regime for Renewable Energy (ERRE)** through auctions has been enabled.
- The SRS applies to all facilities installed before RDL 9/2013 and to all subsequent ones that have been awarded this SRS through auctions.

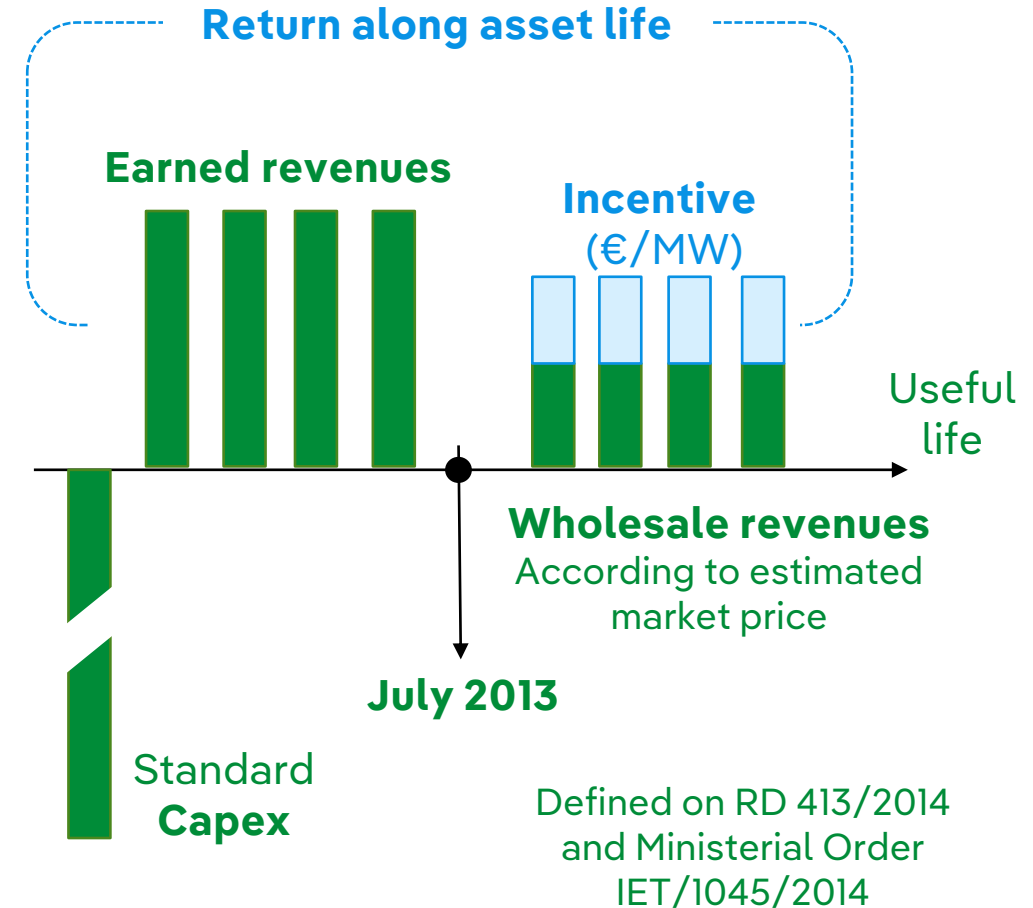

Renewables, cogeneration and waste: Royal Decree-Laws 9/2013 and 413/2014

Complementary incentives
(RI €/MW + RO €/MWh)

Allowed rate of return:
7.398% / 7.09% before /after RDL
9/2013
Ministerial Order TED/171

Competitive process
for new assets

Law 24/2013

Renewables, cogeneration and waste: Law 24/2013, Royal Decree 413/2014 and Royal Decree Law 17/2019 and Royal Decree Law 6/2022

- **Allowed rate of return (before taxes) of 7.398% until 2031 for facilities in operation before RDL 9/2013. For facilities in operation after RDL 9/2013, allowed rate of return of 7.09% until 2025 following CNMC published WACC methodology**
For those facilities in operation before RDL 9/2013 with any pending arbitration or judicial proceeding related to the modification of the Remuneration Regime after RD 661/2007, early termination of arbitration or judicial procedure or the waiver of the perception of compensation is a mandatory requirement prior to obtain the 7.398% allowed rate of return until 2031. (*Royal Decree Law 17/2019*)
- **Remuneration based on revenues from market participation, with a specific additional remuneration based in two terms:**
 - **RI:** A term per unit of installed capacity (€/MW) that covers the investment costs of a standard installation that cannot be recovered by the sale of energy. Allowing the installation to achieve a reasonable return defined by the Government.
 - **RO:** A term for operation (€/MWh) that covers the difference between operating costs and the revenues from the market participation of such standard installation. The installation of renewable energies, cogeneration or waste will not receive such remuneration for operation as long as its income from the sale of electricity in the system is higher than its operating costs.
- **Parameter modification:**
 - **Every 6 years** all the parameters could be changed (including reasonable return) for the remaining useful life, except for the useful life and standard value of the initial investment of an installation;
 - Order TED/171/2020 establishes the remuneration parameters to estimate the regulated remuneration of renewables and cogeneration for the 2020-2025 regulatory period. It recognized a higher cost of CO₂, a higher fuel price (which improves the RO of these plants by 14 €/MWh) and the remuneration for the cost of the System Operator (0.14 €/MWh)
 - **Every 3 years**, and for the rest of the regulatory period, the estimation of revenues from the market will be reviewed, valuing the energy sold at market price based on market price evolution and the forecast for operating hours. **Royal Decree Law 6/2022 establishes an additional exceptional review with effect from January 1, 2022.** The review of parameters scheduled for 31/12/2022 was brought forward to 1/01/2022, dividing the current three-year semi-periodic remuneration period of 2020-2021-2022 into two periods: (1) 2020-2021 and (2) 2022
 - **From 2023-26 semi-period onwards, the reference price for calculating the remuneration will be a basket of forward, daily and intraday market products prices.** The forward indexation path is: 25% in 2023, 50% in 2024 and 75% from 2025 onwards). Additionally, the adjustment for price deviation in the market will no longer be applied, encouraging facilities to sell on PPA. (**Royal Decree Law 6/2022 & Royal Decree Law 10/2022**)
 - **The remuneration system is extraordinarily modified for the period 2023-2025 to adapt it to current market prices.** The new methodology (spot January-May 2023 + futures June-Dec 2023) set a price for 2023 109.31€/MWh (previous estimated 208€/MWh), price for 2024 108.86€/MWh (previous estimated 129.66€/MWh) and for 2025 89.37€/MWh (previous estimate 78.19€/MWh) (**Royal Decree Law 5/2023-new methodology for setting estimated prices, Orden TED 741/2023 - remuneration parameters for period 2023-2025**)
 - **Royal Decree Law 8/2023 (27th December 2023)** the market deviation adjustment for 2024 will consider the minimum value between the 2024 futures basket and the 2024 average daily and intraday market price 2024. Applies to all installations with Rinv. The CNMC will recalculate 2024 RECORE premiums to include the IVPEE.

New Economic Regime for Renewable Energy (ERRE) through auctions

Royal Decree Law 23/2020 (24 June 2020) gave the Government the mandate to develop a new remuneration regime

In addition to the remuneration scheme established in RD-L 9/2013, the Government will develop another remuneration framework based on recognizing a long-term price for energy produced by new electricity production facilities, through auctions.

Royal Decree 960/2020 (4 November 2020) describes the new support system

This RD sets up a very flexible system to be concreted in various Ministerial Orders and Call Resolutions:

- **Product to be auctioned:** power (MW), energy (MWh) or a combination of both
- **Variable to offer** participants will bid a long-term price for energy in €/MWh (10-15 years)
- **Awarded price can be corrected** by an exposition to the market price percentage [price received (h) = price awarded + % exposition * (Daily Market Price (h) + Price Awarded)]
- **Pay as bid auction** with a maximum price and a possible risk price
- Participants must **provide guarantees** to participate
- Winners can install more capacity than the amount awarded in the auction

Royal Decree Law 8/2023 (27th December 2023) modified Royal Decree 960/2020 to include non-economic criteria with a maximum weighting of 30% (art. 48): resilience, environmental sustainability, innovation and socioeconomic criteria.

Royal Decree 962/2024 (September 25, 2024) establishes the framework for the development of offshore wind energy.

- It allows marine renewables to receive regulated remuneration based on the ERRE (RD 960/2020), for a period of up to 30 years.
- The awardees will have a reserved capacity for network access.
- The competitive bidding process may include prequalification criteria and non-price criteria.

Ministerial Order TED/1161

- An indicative calendar for the next five years is published. Almost 20 GW will be auctioned in the period 2020 – 2025.
- Remuneration parameters are set per technology (min. and max. yearly equivalent hours)
- Auctioned product: installed power (kW)
- Facilities with storage: if they want to participate cannot charge buying electricity from the market.
- Only new facilities can participate (the earliest from start of works or first firm commitment to order equipment).
- Participation guarantees amount 60 €/kW (to be partially released if certain milestones are met)
- 50% of auctioned volume is the maximum quantity to be awarded to one company

There will be one Ministerial Order and Call Resolutions for each auction

They will establish the volume to be auctioned for each technology. During 2021 and 2022 four auctions have taken place (no auctions celebrated since 2022):

- 1) January 2021: 3.043 MW awarded at the average price of 24,75 €/MWh
- 2) October 2021: 3.123 MW awarded at the average price of 30,58 €/MWh
- 3) October 2022: 177 MW was awarded (520 MW called for). The average price for biomass: 93,1 €/MWh and 53,9 €/MWh for PV.
- 4) November 2022: 45.5 MW of wind power were awarded (3,300 MW called for) at the average price of 42,8 €/MWh, leaving the bidding deserted for PV sector.

Administrative streamlining and simplification measures, which include a mechanism to speed up environmental processing for government projects

- Royal Decree-Law 14/2022 classifies **hybridization with storage** for metering and registration purposes under Type 3. Hydroelectric storage is also promoted by permitting modifications to existing hydroelectric facilities by adding electronic power stages, provided the changes allow for reversible operation of the facility, without the generation technology itself being considered modified and therefore without the need to obtain new access permits.
- Royal Decree-Law 17/2022, establishes **a maximum period of 15 days for the CNMC to prepare the mandatory report for the authorisation of facilities, with silence considered as approval and the possibility of a favorable report without detailed analysis if the project developer has already received another favorable report for the same technology in the last two years.**
- Royal Decree-Law 18/2022 contain the following measures:
 - **More than one facility may be installed in the same cadastral reference.**
 - Direct lines: the obligation to belong to the same business group is waived for renewable production facilities that connect to a consumer.
 - Small power facilities: **exonerates facilities of up to 500 kW (previously 100 kW in Low Voltage) from the Prior Administrative Authorisation and Construction Authorisation.**
 - **Free depreciation for investments in facilities such as self-consumption of electricity and thermal use for own consumption (i.e heat pumps), provided that they use energy from renewable sources and replace facilities that used energy from fossil fuel sources.**
- Royal Decree-Law 20/2022 contain a final set of measures that simplified the procedures for **renewable projects that fall within the competence of the State:**
 - **"New" renewable projects** (that request Administrative Authorization until 12/31/2024) **are subject to an environmental impact assessment procedure. It offers the possibility of issuing a favourable report by the environmental agency instead of being subject to DIA**, except Red Natura, protected areas, marine environment, lines >220 kV and >15 km.
 - **The new projects (that obtain a favourable report) are declared urgent** for reasons of public interest **and a simplified procedure applies to them.**
 - **Additionally, it extends the self-consumption limit** in the proximity of 2,000 metres (previously 1,000 metres), for solar PV installations on roofs, industrial land and artificial structures (new).

Permitting and grid access processes are modified

Extension of the deadline for accrediting the obtention of the Construction Authorization

- **Royal Decree-Law 5/2023.** The permitting process is modified to **extend the deadline** of construction authorization (AAC: *Autorización Administrativa de Construcción*) to **additional 6 months** for following projects:
 - Grid permission obtained **between January 2008 and June 2020**: the deadline to obtain the AAC is extended **until 25.01.2024** (previous one until 25.07.2023)
 - Grid permission obtained **between June 2020 and the entry into force of the RDL 5/2023 (30.06.2023)**: the term to meet the milestone is 43 months (previous one 37 months)
 - **Royal Decree-Law 8/2023.** The permitting process is modified to:
 - extend the deadline of construction authorization (AAc) **to additional 6 months** (25.07.2024 for grid permission **obtained before Royal Decree-Law 23/2020 and after 31.12.2017**)
 - once AAC is achieved, the extension of the AAE up to **8 years (June 25, 2028)** can be requested during 3 months after AAC. The semester in which you commit to obtain AAE must be indicated in the application
 - for offshore and pump hydro and is extended up to 9 years (previous one 7 years)
 - The grid permission process is modified to:
 - ✓ consider new conditions to include a grid node as a contest node (number of applications in the previous 4 years vs. in the previous 2 years). Additional points are introduced in contests for having DIA and not grid permission.
 - ✓ in requests for demand access for self-consumption with generation access permits, it may not be granted for a capacity greater than 50% of the capacity of the generation permission. Grid permission access for demand will expire after 5 years.
 - ✓ include contests for capacity demand requests if more capacity than available is required.
 - ✓ include demand access guarantees 40€/kW, same as generation access. In case of storage projects, the access guarantee will be 20€/kW.

Inclusion of certain technologies under the environmental assessment

- **Royal Decree 455/2023** modifies environmental process authorization in order to include the following technologies under the environmental process:
 - Ordinary Environmental Assessment for hydro plants and standalone storage
 - Simplified Environmental Assessment for networks <3km, standalone storage and hybrid storage.

Criteria for Evaluating Available Capacity

- **Circular 1/2024 of the CNMC.** Develops el RD 1183/2020 on Access and connection in relation to demand.
 - Establishes the minimum information required in applications.
 - Sets the possibility of grouping applications.

Royal Decree-Law 1/2025, approving urgent measures in economic, transport, and Social Security matters, and to address situations of vulnerability.

- **Supply Guarantee.** The prohibition on cutting off electricity, gas, and water to vulnerable consumers benefiting from the social electricity bonus is extended until December 31, 2025.
- **Social Bonus Discounts.** Extended social bonus discounts have been set for 2025. Until June 30, 2025 they offer a 50% discount for vulnerable individuals and 65% for those severely vulnerable. From July to December 31, 2025, the discounts will be 42.5% for vulnerable individuals and 57.5% for those severely vulnerable.

Royal Decree Law 8/2023, adopting measures to address the economic and social consequences derived from the conflicts in Ukraine and the Middle East, as well as to alleviate the effects of the drought:

- **Reduction mechanism RDL 17/21: It is not extended**, so it ends in December 2023, in accordance with the European market design agreement.
- **IVPEE** (*Impuesto sobre el Valor de la Producción de la Energía Eléctrica*) **del 7%**: Will be reapplied in 2024, with a reduction of 50% in 1Q and 25% in 2Q.
- **Sales tax on energy companies**: The special tax on energy companies will remain in place in 2024 (with the revenue base of 2023). The RDL introduces a text that talks about the possibility of reducing this tax in 2024 by deducting strategic investments in industrial decarbonization.
- **Pumping concessions**: Pumping concessions are allowed to be extended in the event of repowering.
- **VAT on Electricity**: reduced rate of 10% on electricity (up to 10 kW) throughout 2024 and for natural gas during Q1'24 (until 31/12/2023 it is 5%). After that, it would return to 21%.
- **Electricity tax**: it increases gradually throughout the year until it returns to pre-crisis levels.
- **Social bonus**: The increase in the discounts of the social bonus that they made during the crisis until 30th June. The fee to be paid by financiers is reduced by 80% due to lower expected energy costs and the surplus generated in 2023.
- **Electro-intensive**: They maintain a reduction (80%) of tolls to electro-intensive and the possibility of modifying their contracted power until June 2024.
- **System charges and surplus**: enables the transfer of the necessary part of the surplus from 2023 to 2024 to cover system charges, extending the current charges until they are reviewed throughout the year.
- **Demand access**: economic guarantees and expiration of 5 years are set for applications with voltage equal to or greater than 36 kV for demand access and connection permits and competitions in case of nodes saturated with voltage equal to or greater than 220 kV.
- **Hydrogen backbone network**: Enagás is designated as manager, provisionally and subject to separation of activities.

Taxes: Law 15/2012 and RDL 8/2023

| Value Added Tax | Impuesto Especial sobre la Electricidad (IEE) | Tax on electricity production ⁽¹⁾ | Nuclear tax | Green cent | Hydro canon ⁽¹⁾ |
|--|--|--|---|--|---|
| <ul style="list-style-type: none"> 21%. | <ul style="list-style-type: none"> 5.11%. | <ul style="list-style-type: none"> 7% tax on total revenues | <ul style="list-style-type: none"> Spent nuclear fuel (2,190 €/Kg) Nuclear waste (6,000 €/m³ waste) ENRESA tax currently at €10.36/MW | <ul style="list-style-type: none"> Fuel consumption in power plants | <ul style="list-style-type: none"> 25.5% on total revenues 2.5% plants up to 50MW⁽¹⁾ 2.5% pumping⁽¹⁾ |

1,2% Revenue tax. Temporary levy set on revenues under Law 38/2022

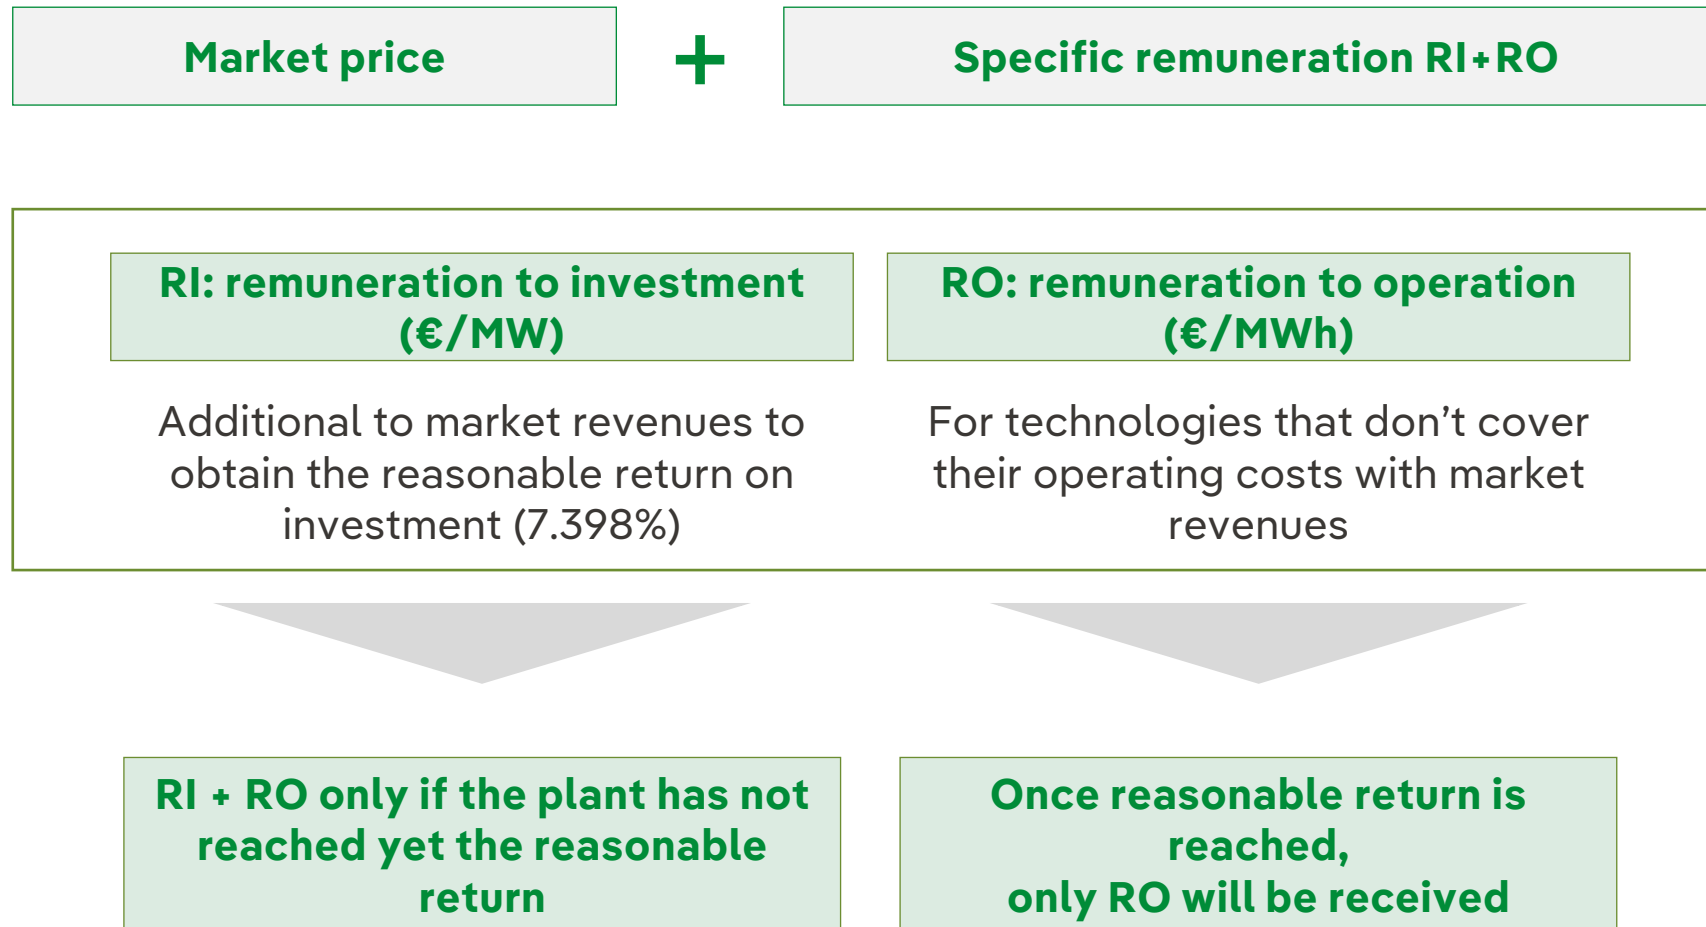

- **Temporary levy** for companies in the electricity, gas and oil sectors with main operator status.
- Set at **1.2% of their revenues**, on a **temporary basis** for the years **2023 and 2024**.
- **Revenues from regulated activities** and **permanent abroad establishments** are **excluded from this tax**.
- The **special tax on energy** companies is repealed, **it does not apply for the year 2025**.

(1) According to Law 7 2022 there is a 92% and 90% reduction in the hydro canon for hydroelectric power plants up to 50 MW and pumping facilities, respectively.

Cogeneration: Royal Decree-Law 17/2022 and 20/2022

- **Royal Decree-Law 17/2022 allows mainland cogeneration plants to temporarily receive the generation market adjustment mechanism (gas cap) in exchange for waiving the regulated remuneration.** It applies only to facilities under the specific remuneration regime, from the time they apply for registration under the adjustment mechanism (starting on the first day of the following month) until they apply for de-registration or the mechanism is discontinued. Thereafter, they will return to their previous regulated remuneration.
- **For cogeneration, Royal Decree-Law 20/2022** establishes that until the **new calculation methodology** is published, **the regulated Operating Remuneration (OR) will be updated based on half-yearly variations in raw material and gas tariffs.**
- **A series of Ministerial Orders established:**
 - i. The remuneration corresponding to the second calendar half-year of 2020 and the first calendar half-year of 2021 (Order TED/989/2022 of 11 October).
 - ii. The values of the operating remuneration corresponding to the first calendar half-year of 2019 (Order TED/990/2022 of 11 October).
 - iii. The operating remuneration for the second half of 2021 for facilities whose operating costs depend essentially on fuel prices (Order TED/995/2022 of 14 October).
 - iv. As envisaged in Royal Decree Law 6/2022, the values for the extraordinary review of the remuneration parameters as of 1 January 2022 were also published (Order TED/1232/2022, of 2 December).
 - v. Lastly, the operating remuneration (OR) for cogeneration and waste in the second half of 2022 was published (Order TED/1295/2022 of 22 December).

Cogeneration: basis for remuneration – Royal Decree-Laws 9/2013 and 413/2014

Nuclear

- The Spanish National Energy and Climate Plan (PNIEC) considers that **4,200 MW of nuclear generation** plants **will shut down** in the **period 2025 – 2030**.
- The **nuclear operators**, together with **ENRESA**, have **agreed on a schedule for closure** of **Spanish nuclear power plants**. This closure schedule complies with all safety, technical, ageing, waste and decommissioning resources criteria.

| | Closing schedule | |
|---------------------|---------------------|-------------------|
| Almaraz I | nov-27 | 44.2 years |
| Almaraz II | oct-28 | 44.3 years |
| Ascó I | oct-30 | 45.8 years |
| Cofrentes | nov-30 | 45.6 years |
| Ascó II | sep-32 | 46.4 years |
| Vandellós II | feb-35 | 46.9 years |
| Trillo | may-35 | 46.7 years |
| | Average life | 45.7 years |

- **Almaraz I&II, Vandellós II, Cofrentes** and **Asco I&II** nuclear power plants have **already obtained the approval** for Operating License Renewal (up to the closing dates agreed in the protocol signed with ENRESA for all plants except Vandellos II (until 26th July 2030) and Ascó II (until 1st October 2031)).
- **Royal Decree 589/2024** has **risen** the **waste fee** charged by ENRESA **to € 10.36 /MWh** as of **1 July 2024** (+30% vs. previous rate of € 7.98 / MWh).

Customers

Regulated tariff (PVPC)

PVPC – Royal Decree 216/2014

- Regulated tariff. For consumers with capacity contracted <10 kW
- Components:
 - Hourly prices in wholesale market, published by Red Eléctrica
 - Access tariff and fees, published in the Official Spanish Gazette (BOE)
 - Supply margin, published in the Official Spanish Gazette (BOE)
 - Taxes (VAT – 21% / Electricity tax – around 5%)

New PVPC price – Royal Decree 446/2023

- PVPC redesigned to be partially indexed to forward instead of just spot prices, according to the European Commission requirement
- It entered into force on January 1st, 2024, and is limited to domestic customers and microenterprises with contracted power <10 kW
- Royal Decree gives suppliers six months to purchase energy indexed to futures.

Weight of the forward market

2024: 25%
2025: 40%
2026: 55%

The forward market consists of:

Annual forward market: 54%
Semiannual forward market: 36%
Monthly forward market : 10%

PVPC hourly price formula:

% of forward basket price for the month
(constant) +% of daily hourly market
price including Adjustment Services

- The forward price varies each month.
- The volume of forward energy to be purchased shall be calculated and published ex-ante by the system operator.
- The regulated suppliers buy the energy in the forward market during the six months prior to the delivery period.
- The difference to the actual hourly demand is bought in the spot at the corresponding hourly market price.
- The price will therefore follow the behavioral curve of the hourly market price (damped by the effect of the forward market).
- The cost of financing the social bonus charged to the regulated suppliers is recognized in the calculation of the PVPC.
- This RD contemplates a transitional period for regulated suppliers to recover the cost of the social bonus they have been paying since March 2022 (when the new financing system for the social bonus began with RDL 6/2022).

Social Bonus

Royal Decree 897/2017 (Social Bonus regime prior to Royal Decree-Law 6/2022)

- Discount applied to electricity bill (25% vulnerable customers / 40% severe vulnerable customers), according to:
 - Income criteria
 - Limits to consumption
- Two types of vulnerable consumers and groups with special conditions

Royal Decree Law 23/2021: increased the discounts up to 60% and 70%, respectively.

Royal Decree Law 6/2022

- Under Royal Decree-Law 6/2022, a new system for financing the Social Bonus has been established, which is binding on all companies engaged in electricity activities, (production, transmission, distribution, supplying and direct consumers), recognizing the cost for all companies engaged in regulated activities
- The parameters for 2022 are the following (Orden TED/733/2022)
 - Energy producers: 1.294768 Eur/MWh
 - Transmission company: 0.005716 Eur/Remunerated Eur
 - Distribution companies: 1.151582 Eur/Supply Point
 - Suppliers: 13.401931 Eur/Supply Point
 - Direct costumers in the market: 1.282647 Eur/MWh

Royal Decree Law 18/2022:

- Increased the discounts up to 65%-80%, respectively, until 31st December 2023
- Increased 15% in subsidized energy.
- Created a new transitional reduced tariff with a 40% discount for low income households, until 31st December 2023.
- Created a new transitional gas LRT (Last Resort Tariff) for residential communities with communal boilers, and extends the restriction on the increase in the LRT for gas, both until 31st December 2023. The possible deficit is covered by a EUR 3,000 million budget item in the General State Budget. The budget for the thermal bonus is also increased by EUR 225 million.
- Included the prohibition of electricity and natural gas supply cutoffs for vulnerable consumers until 31st December 2023

Social Bonus

Royal Decree Law 8/2023:

- The prohibition on cutting off supply is extended until 30/06/2024.
- Social Bonus: extended until 30/06/2024 with extended discounts (65% for vulnerable and 80% for severely vulnerable).
- Establishes new unitary financing by activities from 01/01/2024, with relevant reductions:

| Activity | Unit | 2023 | 2024 | % Reduction |
|------------------|------------|-----------|----------|-------------|
| Production | (€/MWh) | 1,466465 | 0,238676 | 84% |
| Transport | (€/€ Paid) | 0,005618 | 0,001356 | 76% |
| Distribution | (€/CUPS) | 1,161768 | 0,310777 | 73% |
| Retail | (€/CUPS) | 14,024972 | 2,299047 | 84% |
| Direct Consumers | (€/MWh) | 1,421668 | 0,219448 | 85% |

Royal Decree Law 1/2025:

- The prohibition on cutting off supply is extended until December, 31st 2025.
- **Social Bonus:** extended discounts are available until June 30, 2025, offering 50% for vulnerable individuals and 65% for those severely vulnerable. Additionally, discounts will continue until December 31, 2025, providing 42.5% for vulnerable individuals and 57.5% for those severely vulnerable.

Iberdrola España: Electricity Production & Customers

Customers

Electricity access fees

- **Royal Decree-law 1/2019** assigned the CNMC the competence to develop the methodology to establish electricity network tariffs, while the Government has kept the competence to regulate other charges related to the electricity sector. This way, new third party access tariffs are disaggregated into charges (Ministry competence, designed to collect policy costs) and network tariffs (CNMC competence, designed to collect costs associated to networks use).
- The new network tariffs and the new electricity system charges entered into force on **1st June 2021**.

CNMC methodology for electricity network tariffs. Circular 3/2020

- Distinction of fixed (€/kW) – variable (c€/kWh) structure is maintained.
- Domestic customers (P≤15KW) are unified in a single tariff group (2.0TD), which replaces the 6 previous domestic tariffs (2.0A, 2.0DHA, 2.0DHS, 2.1A, 2.1DHA y 2.1DHS).
- The tariff periods are modified: 3 periods for domestic customers and 6 periods for SMEs and industrial customers.
- An optional tariff for public electric vehicle charging points is incorporated, which is attractive for low-use points

Royal Decree 148/2021 on the methodology for calculating electricity system charges

(Renewable incentives, historical tariff deficits and costs for non-mainland regulated generation)

- The RD establishes a structure of charges similar to electricity networks tariffs
- The new charges scheme aimed to preserve an amount equivalent to the one obtained with the previous prices for each tariff segment.

Joint effect: electricity network tariffs + electricity system charges

| Voltage level contracted | Previous network tariffs and charges | New network tariffs and charges |
|--------------------------|--------------------------------------|-------------------------------------|
| < 15 kW (Low voltage) | 60% fixed term 40% variable term | 50% fixed term 50% variable term |
| >15 kW (High voltage) | 80% fixed term 20% variable term | 60% fixed term 40% variable term |

Note: Low voltage tariffs: They will apply to supplies made to voltages not exceeding 1 kV

- 2.0TD tariff: simple rate for low voltage, power under 15 kW. Three periods of energy and two of power.
- 3.0TD tariff: general rate for low voltage, power over 15 kW. Six periods of energy and power.

Storage, a key technology to provide flexibility in the markets

Storage growth plan (M kWh)

Tâmega

Largest hydroelectric facility in Portugal

La Muela II

Largest pumping facility in Europe

(1) Does not include ENW's RAB (~2.9 Bn GBP), as the asset is not fully consolidated

(2) As of 31st March 2024 – this information is prepared at each regulatory year end

Scottish Power: Networks

On 22nd October 2024 Iberdrola closed the acquisition of ~88% of distribution company Electricity North West (ENW), consolidated through the equity-method until March 2025, after taking control

Key Operating Figures

| | | |
|-----------------------------|-----------------------|--------------------------|
| RAB | ~2.9 Bn GBP | ~3.4 Bn EUR |
| Supply points/ customers | 2.4 M / 5.0 M | |
| Km of lines | 12,800 Km overhead | 47,300 Km underground |

Key Financial Figures

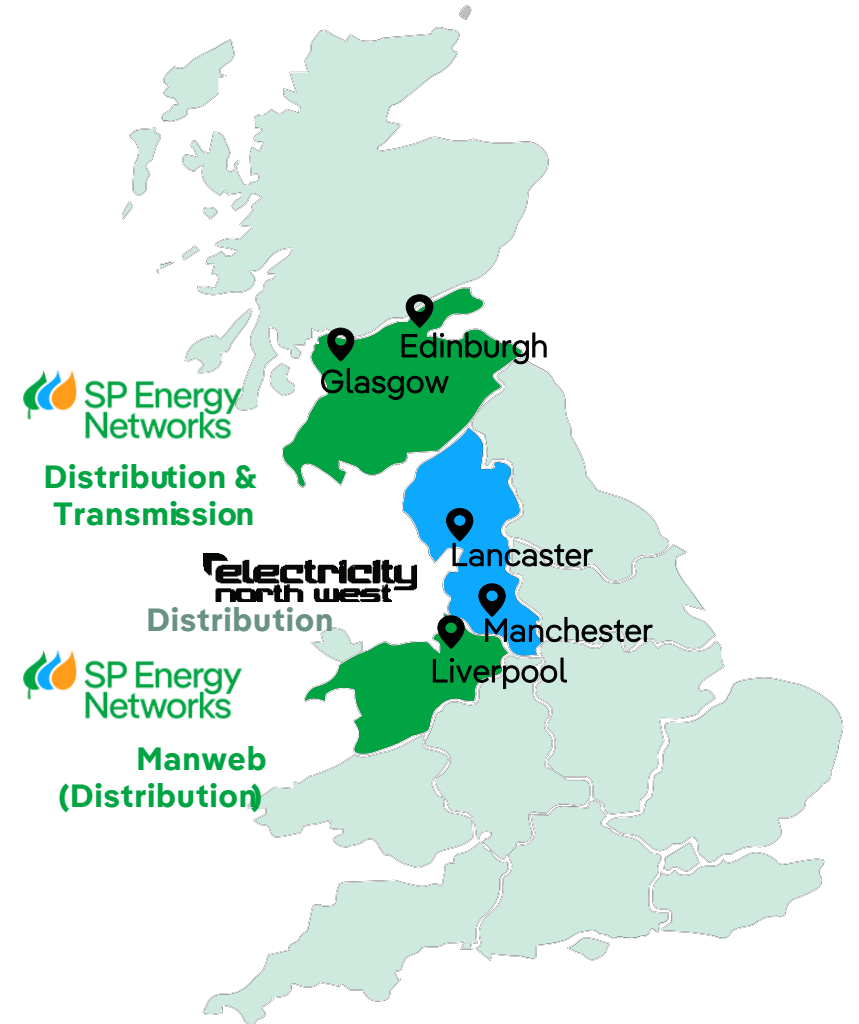

| | |
|---------------------------|------------|
| EBITDA | 400 M GBP |
| Net income ⁽¹⁾ | 126 M GBP |
| Net Debt ⁽²⁾ | 2,2 Bn GBP |

The deal fits Iberdrola's 2024-2026 strategy increasing exposure to networks and to an A-rated country

Data as of March 2024 except otherwise indicated

(1) Excluding any PPA and accounting alignment

(2) As reported by ENW as of March 2024 (corresponds to NWEN Jersey), before capital increase of 400 MGBP, excluding 323 MGBP derivatives at market value

Form of control

- Currently regulated under Ofgem’s incentive-based ‘RIIO’ model. Revenues are earned from the delivery of incentives, innovation and outputs set against regulatory targets.
- Method: Ex-ante revenue cap. Regulator sets majority of maximum allowed revenue fixed upfront and on a real basis.
- Duty on regulator to ensure that regulated networks are able to finance their licensed activities – maintain an investment grade credit rating.

Price Control Overview

| | Electricity Transmission | Electricity Distribution |
|-----------------------------------|--------------------------|------------------------------|
| Price Control | RIIO – ET2 | RIIO – ED2 |
| Period | 2021 – 2026 | 2023 – 28 |
| Allowed Return on RAV (CPIH-real) | 3.50% (2024-25) | 4.14% (2024-25) |
| RAV at Dec-2024 | £4.0bn | SPD - £2.7bn SPM - £3.1bn |

Incentives, Uncertainty Mechanisms and Adjustments

- Potential to increase outturn returns through financial rewards gained from spending less than expected and outperformance against measures related to defined outputs.
- TOTEX incentive mechanism shares under/overspend on allowed TOTEX between networks and customers through adjustment to allowed revenues, based on efficiency incentive rate (*electricity distribution: 50%, electricity transmission: 49%*).
- Provisions to manage specific cases of uncertainty risk through possible revenue changes during price control e.g. indexation, uncertainty mechanisms, volume drivers and pass-through costs.
- Revenues from incentive rewards and uncertainty mechanisms are recovered in the current year as part of updated 5-year revenues (actuals & forecast).

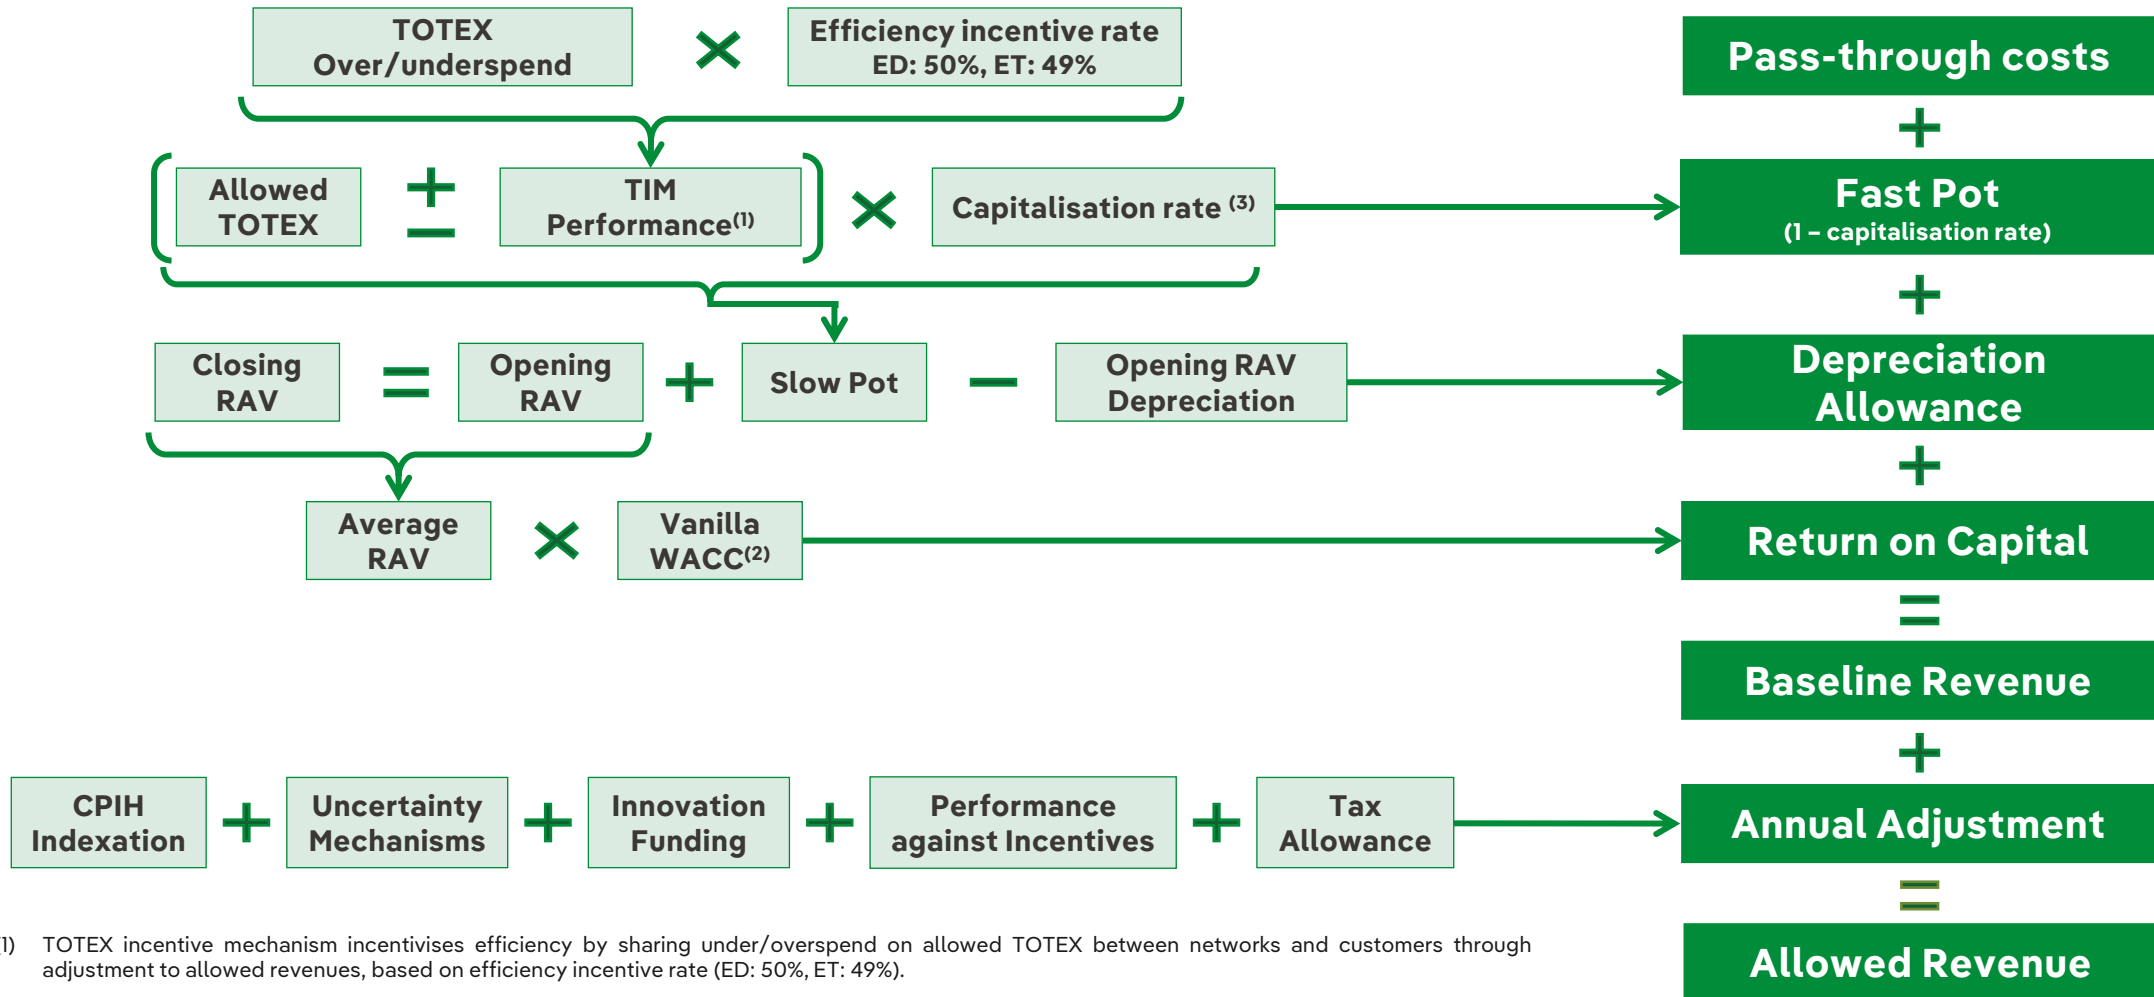

Baseline Revenue

- Efficient level of expected costs necessary to carrying out activities are assessed through total expenditure (TOTEX).
- Regulatory Asset Value (RAV) is a major input to the setting of Allowed Revenue. Revenue components for depreciation (effectively a capex allowance) and return allowance are calculated from RAV.
- Following the application of the TOTEX incentive mechanism, TOTEX is allocated into a “fast pot” and “slow pot” determined by the capitalisation rate (ED: 70% cap rate 1 / 85% cap rate 2, ET: 84% cap rate 1 / 85% cap rate 2). Cap rate 2 is applied to uncertainty mechanism TOTEX.
- The capitalised slow pot is added to the RAV and remunerated over time through allowances for return on capital and depreciation (Depreciation Rate: 45 years post 2023/24 for ED & 2020/21 for ET investment).
- The “fast pot” (ED: 30% / 15%, ET: 16% / 15%) is treated as an in year ‘pay-as-you-go’ allowance.
- Provision for tax.

Adjustments

- Annual adjustment of allowed revenues for:
 - CPIH indexation of baseline revenues;
 - Incentive rewards/penalties;
 - Innovation funding;
 - Variance in actual TOTEX compared to allowance and also update of forecasts;
 - Non controllable costs i.e. uncertainty mechanisms; and
 - True Ups, including for differences in actual demand versus forecast demand as network companies are not exposed to demand volatility.

High level illustration of allowed revenues derivation

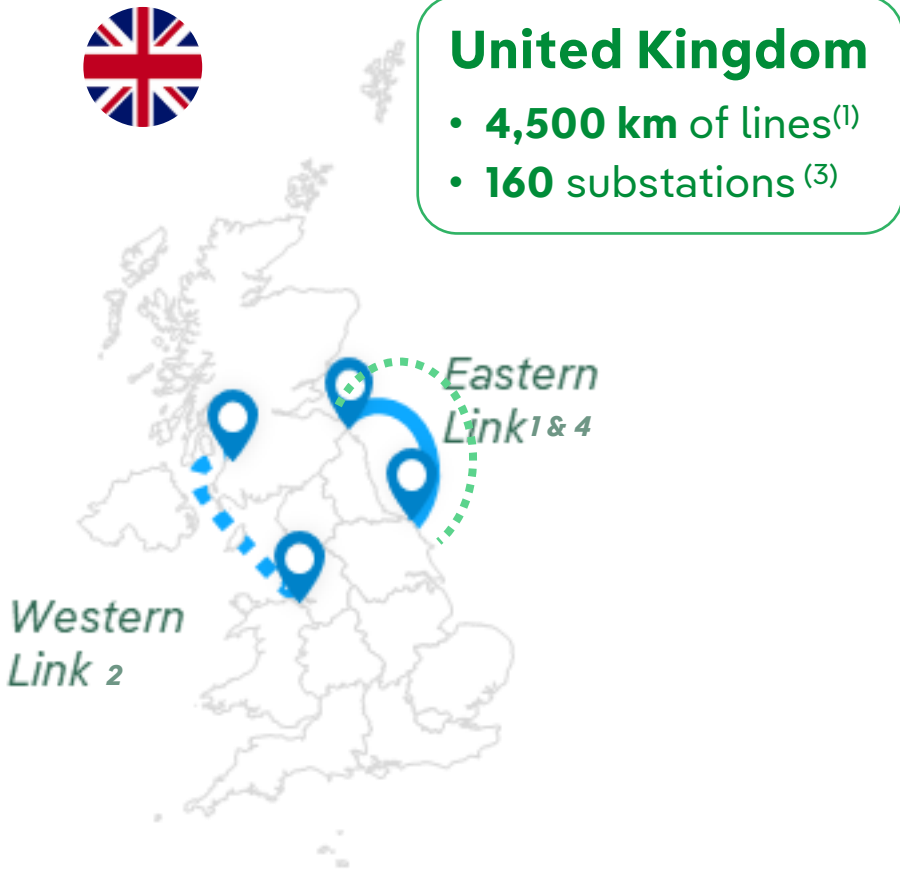

(1) TOTEX incentive mechanism incentivises efficiency by sharing under/overspend on allowed TOTEX between networks and customers through adjustment to allowed revenues, based on efficiency incentive rate (ED: 50%, ET: 49%).

(2) Vanilla WACC: pre tax cost of debt, post tax cost of equity

(3) Two sets of capitalisation rates apply depending on the allowance type. Baseline TOTEX allowances are subject to "Capitalisation rate 1", whereas Uncertainty Mechanisms allowances are subject to "Capitalisation rate 2". ED: 70% cap rate 1 / 85% cap rate 2, ET: 84% cap rate 1 / 85% cap rate 2.

Scottish Power: Networks

Several transmission projects to achieve decarbonisation targets by 2030, with significant grid investments for the integration of offshore and onshore wind

Renewables Obligation

Form of Control

- Legacy scheme for incentivising investment in renewables across the UK.
- Demand-led scheme.
- Renewable Obligation Certificates (ROCs⁽¹⁾) are issued to accredited generating stations for ~20 years depending on the station's accreditation date.

Remuneration

- Generators receive wholesale market plus ROC based on metered output.
- ROC level of support (banding) set by technology type and commissioning date:
 - Onshore wind 0.9 - 1 ROCs / MWh
 - Offshore wind 1.8 - 2 ROCs / MWh
- The value of a ROC is based on buyout + recycle price. Buyout price is indexed annually to RPI⁽²⁾ and is set at £67.06 for 2025/26. The recycle price is variable and is dependent on the level of ROC qualifying generation compared to demand from electricity suppliers. The recycle price can never be negative.

Timing

- Closed to onshore wind on 31 March 2016 and all other technologies on 31 March 2017.

Contracts for Difference (CfD)

Form of Control

- Current mechanism for incentivising investment in renewables in GB.
- Allocated via annual competitive auctions.
- 15-year contract stabilising revenues at a price set in the auction (the Strike Price) linked to CPI⁽³⁾.

Remuneration

- Generator receives wholesale market plus the difference between the Strike Price and the market reference price (a measure of the average GB electricity market price) based on metered output.
- Generator pays back if the market reference price is higher than the Strike Price.
- AR6 (2024 auction) - Strike Price for new offshore wind £58.87/MWh, permitted reduction offshore wind £54.23/MWh, onshore wind £50.90/MWh and solar PV £50.07/MWh.

Timing

- CfD auctions held in 2014, 2017 and 2019, 2022, 2023 and 2024.
- Held annually from 2023 (AR5), 2024 (AR6) and AR7 due to commence in 2025.
- Open to onshore wind, solar PV, offshore wind and less-established technologies.

Offshore Transmission Regime

- Generators build the transmission assets and then transfer them to transmission operator at construction completion.
- Licences to operate new offshore transmission assets are allocated via competitive tender process.

(1) Operators can trade ROCs with other parties. ROCs are used by suppliers to demonstrate they have met their obligation to source an increasing proportion of the electricity they supply from renewable sources. Normally, a renewable generator will transfer the related ROCs through Ofgem's electronic registry when it sells power to an electricity supplier.

(2) Retail Price Index measures the change in the cost of a representative sample of retail goods and services, including the cost of housing. The measure has now generally superseded by CPI.

(3) Consumer Price Index is the official measure of inflation of consumer prices of the United Kingdom, based on 700 different goods and services excluding the cost of housing.

Electricity System Operation

Form of Control

- The National Electricity System Operator (NESO) is the System Operator (SO) for the electricity transmission network in Great Britain. It is responsible (overseen by the regulator, Ofgem) for the day to day operation of the system, including system stability and balancing.
- The UK power markets are bilaterally traded markets. If a market participant generates or consumes more or less electricity than they have contracted for, they are exposed to the imbalance price, or 'cash-out', for the difference.

Renewables can Participate in the following markets to manage grid stability and security of supply

- **Balancing Market:** Market participants can provide offers and bids to the SO to help balance the system at very short notice. The balancing market is settled on a pay-as-bid basis.
- **Ancillary Service Markets:** Ancillary services are competitively tendered by the SO to support the continuous stable flow of electricity. The SO will contract a variety of services that are required to maintain grid stability and security, including fast frequency response, short term operating reserve and black start.
- **Capacity Market:** The Capacity Market is a market-wide pay-as-clear (£/kW/year) capacity auction. Auctions are held ahead of delivery (T-1 years and T-4 years) to procure sufficient capacity (interconnection, demand side response, generation) to meet a reliability standard of three hours loss of load expectation per year. Clearing prices under the T-4 auctions are adjusted annually for CPI with effect from the commencement of each delivery year.

National Energy System Operator (NESO)

- **Decision:** Following industry consultation in 2022, Ofgem & Government decided GB needed a new independent organisation to take whole system approach focusing on energy security, net zero and affordable bills.
- **Transition:** National Grid Electricity Operator (NGESO) transitioned to National Energy System Operator (NESO) on October 1st, 2024. Establishing an independent, public corporation responsible for planning GB's electricity and gas networks and operating the electricity system.
- **Responsibilities:** Delivering a whole system approach to network planning, markets, resilience, security of supply and energy insights
- **Connections Reform:** Scheduled to be implemented Q2 2025 this reform will move the application and offer process from the model of 'first come, first serve' to 'first ready, first to connect'. The model will also move to an annual gated window for all new applications and existing grid agreements.

Electricity Generator Levy

- 45% levy on RO (Renewable Obligation) and corporate PPA backed sites from January 2023 until March 2028 – new investment from 22 November 2023 is excluded.
- Tax applies to revenues above £75MWh. Taxable revenues are net of trading and delivery costs with a £10M tax free allowance on top of net revenue.
- CfD backed assets, ROCs and other additional renewable incomes are excluded.

UK Emissions Trading Scheme

- The cost of carbon impacts on wholesale price of energy and therefore the achieved price of the renewables assets that receive ROCs.
- With effect from 1 January 2021, the UK Emissions Trading Scheme (“UK ETS”) replaced the UK’s participation in the equivalent EU Emissions Trading Scheme (“EU ETS”).
- The cap for Phase 1 of the UK ETS was initially set at 5% below the UK’s expected notional share of the EU ETS cap for Phase IV of the EU ETS (2021-2030). Over time, the cap will be reduced so the total emissions from each industry will fall.
- Participants buy and sell emissions allowances through auctions or secondary markets: the price of traded allowances was £35.22 t/CO₂ on 18th December 2024.

UK Carbon Border Adjustment Mechanism

- In 2023, the UK government consulted on various potential measures to mitigate domestic carbon leakage. As a result, the UK Carbon Border Adjustment Mechanism (CBAM) will be implemented in 2027.
- This will impose a direct carbon price (£/tCO₂) on greenhouse gas emissions generated during processes like manufacturing.
- The UK CBAM will work cohesively with the UK ETS, including free allowances, to ensure imported products face a carbon price comparable to that of UK produced goods, reducing the risk of carbon leakage.

Customers

Form of Control

- Operates in the liberalised UK energy market for gas and electricity under the energy regulator Ofgem with a regulatory framework of both prescriptive and principles-based obligations.
- As of 31 October 2024, the UK domestic energy market consists of approximately 24.5m gas and 29.7m electricity accounts⁽¹⁾.

Retail Market Share

- The UK market has undergone consolidation, stabilising at around 21 domestic suppliers after a large number of supplier exits in the period 2021-22.

Price Regulation

- Price regulation exists for domestic customers on default tariffs (including standard variable tariffs) through the Domestic Gas and Electricity (Tariff Cap) Act 2018, which came into effect on 1 January 2019. The cap's original December 2023 end date was removed by The Energy Prices Act 2022, with the Secretary of State now having powers to remove the cap upon notice.
- Ofgem estimates that the default tariff currently protects around 22 million households - significantly higher than in the early years of the cap, with wholesale price volatility in recent years resulting in more customers defaulting to a capped tariff rather than choosing a new competitive tariff. However, this number has come down from its peak of 29 million in 2023.
- In response to the energy crisis, Ofgem increased the frequency of price cap updates in October 2022, from every 6 months to every 3 months.
- Ofgem is now carrying out wider review of retail price regulation to make sure that the energy retail market is investable and resilient.

Obligated support for low income and fuel poor customers

- **Warm Home Discount** is a government scheme aimed at addressing fuel poverty which obliges suppliers to provide a £150 annual discount on energy bills to eligible customers. The scheme operates under different legislation in Scotland from that in England & Wales, with 9.4% of the spend in Scotland and 90.6% in England & Wales. The scheme currently provides direct support to 3.2m customers and runs to March 2026 but DESNZ is consulting on expanding it to an additional 2.7 million households for winter 2025/26.
- **Energy Company Obligation (ECO)** is a Government scheme to tackle fuel poverty which also provides a consequential reduction in carbon emissions. The scheme requires suppliers with more than 50k customers to invest in energy efficiency measures with the obligation based on customer numbers and supply volumes. This is the 4th programme of this nature and will operate until March 2026 and is worth £4 billion.
- **Great British Insulation Scheme (GBIS) Obligation** was introduced in June 2023 and imposes annual targets (until March 2026) on suppliers to improve the energy efficiency performance of homes in GB. A minimum of 20% of the programme is to be delivered to low income and fuel poor homes and the remaining support may be offered to homes meeting wider qualifying criteria.

(3) Projects under construction in 2025

Avangrid: A private company

On May 17th, 2024, Iberdrola announced it reached an agreement with Avangrid to acquire the shares it does not own for 35.75\$/share

➤ **Transaction was approved** by shareholders, the Federal Energy Regulatory Commission, the Maine Public Utilities Commission and New York State Public Service Commission

On December 23rd, 2024, Iberdrola acquired remaining 18.4% that it did not control

➤ Transaction allows **Iberdrola to continue to grow strongly and more efficiently in the USA**

Avangrid will be able to participate more economically in new energy infrastructure projects in the grid, representing a significant investment in local communities and generating hundreds of direct and indirect jobs

Investments will create a **more robust, resilient and reliable power grid**, and will help meet the growing demand from utilities

8 regulated utilities in New York, Connecticut, Maine & Massachusetts

Additional Positive Impacts - NY

- Includes increased funding for tree trimming, Vegetation Management (benefiting NYSEG and RG&E where 51% and 20% of outages are caused by trees respectively)
- Bill assistance programs for \$27M at NYSEG and \$23M at RG&E annually for fixed and/or low-income customers
- 231 additional Full-Time Employees focused on improving customer service and field operations (driving the creation of 716 indirect jobs in New York state)
- \$250M in energy efficiency & heat pump incentive programs
- Full reconciliation of the weighted average fixed long-term debt rate above rate case estimates
- SAIFI Tier II target raised, reducing exposure to reliability negative revenue adjustments
- Includes ability to use NYSEG SAIFI negative revenue adjustments to accelerate vegetation management reclamation work to improve reliability
- Includes ability to petition the Commission seeking recovery of excessive incremental Make Ready Program costs (expenses associated with preparing a site for third party telecom/broadband attachments)

New York – Climate Leadership & Community Protection Act (CLCPA)

Critical transmission upgrades for meeting NY state climate actions goals

Phase I (December 2022):

- **~\$1.3B** potential transmission investment for **NYSEG**, rate-based investments
- 13 projects with in-service dates ranging from 2026 – early 2030s
- Projects create transmission headroom for ~2.8 GW of increased network capacity

Phase II (February 2023):

- **~\$2.3B** transmission investment for **NYSEG/RG&E**, rate-based investments
- The order authorizes NYSEG/RG&E to build the projects, subject to NY Article VII and Article VIII approvals
- 32 projects to be completed between 2025 – early 2030s
 - 28 projects located in New York’s Southern Tier
 - 4 projects in other geographic locations across New York
- Projects create transmission headroom for nearly 2 GW of increased network capacity
- Cost of all projects will be recovered from customers in NY statewide via a FERC-jurisdictional formula rate, with payments collected via the New York ISO

(1) Based on actual equity ratios vs. allowed;

(2) ROE reductions on appeal: Customer service (20bp), English Station (20bp), Transmission Adj. Clause & Customer lost benefits (5bp), Incomplete Cost of Service study & Rate Design analysis (2bp)

Connecticut UI Rate Case – Filed on November 12th, 2024

Period

1 Year (Nov '25-Oct '26) - New rates expected to go into effect in November 2025

ROE/Equity

ROE request: **10.50%** / Equity request: **54%**

Capex

Rate filing has **\$517M** of capex placed in service, including \$314M of capex already placed in service from the past but not yet earning rates.

Revenue

Increases US GAAP Revenues by **\$105M** for the period Nov'25-Oct'26

Credit Metrics

Rate Case filing leads to improved metrics above downgrade threshold:

- Moody's at **20.1%** in 2025/26 (vs. 21% estimate for 2024)
- S&P at **23.5%** in 2025/26 (vs. 18% estimate for 2024)

Final Decision expected on Q4 2025

Connecticut SCG & CNG Rate Cases

First rate filings for the companies since 2018 & 2017, respectively⁽¹⁾

Period

1 Year (Dec '24 / Nov '25), new rates to go into effect in December 2024

ROE/Equity

- **ROE: 9.15%**
- **Equity: 53%**

CapEx

- **\$203M** (\$60M for CNG and \$143M for SCG)
- Capex Tracker allowing additional investments up to **\$83M**

Final Decision appealed to the Connecticut Superior Court on Dec 20th, 2024

(1) Last rate increase in 2021 & 2020 respectively

FERC Jurisdiction Rate Plans

| | Central Maine Power Transmission (CMP-T) | United Illuminating Transmission (UI-T) |
|-----------------------|---|--|
| Regulator | Federal Energy Regulatory Commission (FERC) | |
| Term | Annual filing by July 31 | |
| Avg. Rate Base (2024) | \$1,560M | \$784M |
| Allowed ROE | 10.57-11.74% | 10.57-11.74% |
| Equity Ratio | Actual (~53-59%) | Actual (~53-58%) |
| Earnings Sharing | No | No |
| Decoupling | No | No |

Trackers / Reconciled Costs

- Annual true-up to actual operating expenses and revenue requirement
- Capital investments not included in rate base until they are placed in service, unless a specific FERC incentive is granted allowing for the inclusion of Construction Work in Progress (CWIP) in rate base
- We are allowed to calculate an Allowance for Funds Used During Construction (AFUDC) as a non-cash carrying charge added to CWIP and recovered over the life of the asset on all other projects that do not receive the CWIP in rate base incentive

| ROE filing | | Annually (July) | |
|------------------------------|------|-----------------|-------|
| Achieved ROEs ⁽¹⁾ | 2023 | 11.3% | 11.2% |
| | 2022 | 11.4% | 11.3% |
| | 2021 | 11.8% | 11.3% |
| | 2020 | 12.0% | 11.3% |
| | 2019 | 9.9% | 11.3% |
| | 2018 | 11.8% | 11.3% |
| | 2017 | 11.4% | 11.3% |
| | 2016 | 11.2% | 11.4% |

(1) Based on actual equity ratios vs allowed.

Avangrid: Networks

New England Clean Energy Connect (NECEC)

145-mile transmission line to bring 1,200 MW of Hydro Power from Quebec to NE-ISO

Project Benefits

- ✓ Direct Massachusetts customers **savings of \$220.7M** annually for the first 5 years. **\$214.6M** annually over 20 years, **totaling \$4.25B in savings**
 - ✓ Annually **reduced 3.0-3.6 million metric tons regional CO₂** emissions from electricity generation
 - ✓ **Increased employment** and **property taxes** for local communities
 - ✓ \$200M+ in Transmission upgrades
 - ✓ 50,000 acres land in conservation
 - ✓ Additional fiber optic, heat pump support, rate relief and low-income programs in Maine
-
- ✓ Estimated **construction cost** for the full project of **\$1.5B⁽¹⁾**
 - ✓ **Contract Price:** \$13.22/kW-month for year 1 escalating 2% annually through Year 20 & \$10.11/kW month Years 21-40
 - ✓ Estimated **commercial operation date (COD)** in **2025**

(1) As of 10Q for 3Q 2024

How to model

Approach for Networks Income Calculation

Rate Base * Equity Ratio⁽¹⁾ * Regulatory ROE (8 utilities)

Net Other Income (Deductions):

- Allowance for funds used during construction (AFUDC debt and equity)
- Debt Costs not supporting debt portion of rate base
- Carrying costs on regulatory assets & liabilities not included in Rate Base
- Other Income & Deductions (eg: Charitable Donations, Shareholder-borne costs)
- Be sure to tax effect values

Joint Ventures (GenConn, NY Transco, MEPCO)

Networks "Income"

(1) Connecticut companies and Transmission based on actual equity ratio. All other utilities based on allowed equity ratio

Economics

Rate Base

- **Rate Base** = Gross plant in service - Book depreciation - Deferred income taxes +/- working capital +/- regulatory assets & liabilities (not accruing carrying costs) + prepaid + materials & supplies
- **Average rate base for a 13-month period** used for gas & electric distribution. Transmission follows a 5-quarter average and 2-point average.

AFUDC & Carrying Costs

- Utilities accrue **AFUDC** on longer-term construction projects prior to being placed in-service
- Utilities accrue **Carrying Costs** on certain regulatory assets & liabilities not in rate base
- This has an impact on **current earnings**, but there is **no current cash flow impact**

Joint Ventures

- 50% JV with affiliates of Clearway Energy (GenConn) in 2 regulated peaking plants with ROE of 9.85%
- 20% investment in NY Transco with 53% Equity Ratio
- Maine Electric Power Co., Inc. (MEPCO) owns a 345 kV lines between the New Brunswick border and Maine Yankee

Earned ROE

- Based on formulas approved by regulator and used in annual compliance filings
- Formulas based on operating income with certain regulatory adjustments

Generation assets within Avangrid networks

| Operating Company | Facility Location | Facility Type | Installed Capacity (MW) | Year(s) Commissioned |
|-------------------|----------------------------------|-------------------|-------------------------|----------------------|
| NYSEG | Newcomb, NY | Diesel Turbine | 4.3 ⁽¹⁾ | 1967, 2017 |
| NYSEG | Blue Mountain, NY ⁽²⁾ | Diesel Turbine | 2.0 | 2019 |
| NYSEG | Long Lake, NY ⁽²⁾ | Diesel Turbine | 2.0 | 2019 |
| NYSEG | Eastern New York (6 locations) | Hydroelectric | 61.4 | 1921-1986 |
| RG&E | Rochester, NY (3 locations) | Hydroelectric | 57.1 | 1917-1960 |
| UI ⁽³⁾ | Connecticut (4 locations) | Fuel cell / Solar | 13.4 ⁽³⁾ | 2015 - 2016 |

- UI is party to a 50-50 joint venture with certain affiliates of Clearway Energy, Inc. in GCE Holding LLC, whose wholly-owned subsidiary, GenConn, operates two 200 MW⁽⁴⁾ peaking generation plants in Devon and Middletown, both in Connecticut.

(1) 2 Units totaling 4.3 MW, However, Unit 2 has a fuel mix of Kerosene & Diesel which limits output; total available capacity = 4.1 MW.

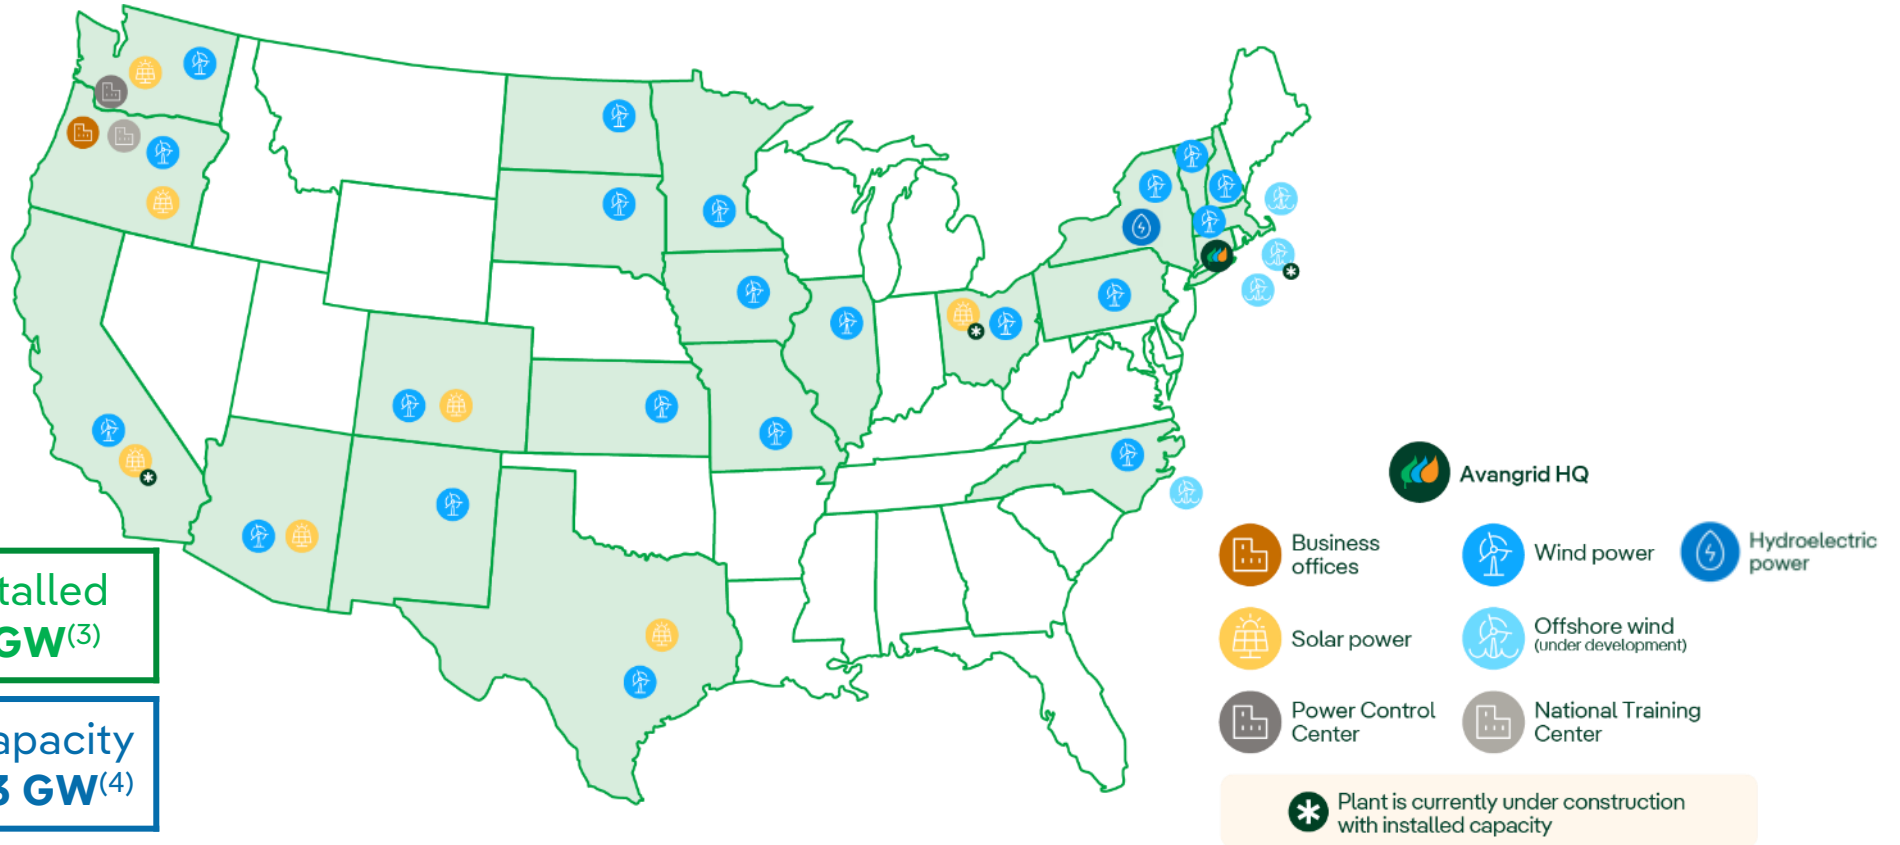

(2) Blue Mountain and Long Lake diesel turbines are rented facilities.

(3) Includes 2.2 MW of solar and UIL Distributed Resources' Glastonbury Fuel Cell & Energy Recovery Generator 3.4 MW.

(4) Nameplate capacity.

Avangrid: Electricity Production & Customers

Third largest wind operator in the U.S.⁽¹⁾ with 9.6⁽²⁾ GW wind and solar installed; leading large-scale offshore wind development in the U.S.

2024 Power Installed Capacity: **10.2 GW**⁽³⁾

2024 Installed Capacity (incl. Hydro): **10.3 GW**⁽⁴⁾

1.5 GW⁽⁵⁾ onshore & offshore under construction

(1) As of 30/04/2025 ACP data
(2) As of 12/31/2024
(3) Includes capacity from onshore wind, solar, thermal and offshore assets (excludes hydro)
(4) Including hydro 118 MW, this technology is managed by the Networks business
(5) Including 100% 806 MW Vineyard Wind 1, a 50/50 joint venture between Avangrid Power and Copenhagen Infrastructure Partners.

Avangrid: Electricity Production & Customers

Continued and sustained growth as a leading power company

Historical Installed Capacity (MW)⁽¹⁾

(1) As of 31/12/2024

(2) 2009-2012 Projects funded with Section 1603 ITC cash grants (Power received \$2B in cash for \$6B investment; no PTCs)

Portfolio characteristics (as of 12/31/2024)

- ✓ **Installed capacity of 10.2 GW⁽¹⁾ in 21 states & 8 electric power markets**
- ✓ **~76% of wind and solar installed capacity under long-term contract**
- ✓ **~11 years average remaining PPA life**
- ✓ **Target 75-85% capacity under contract and/or hedged**
- ✓ **Weighted Average PPA price realized to date = \$44/MWh**
- ✓ **Escalators on ~46% of PPAs, some tied to inflation**
- ✓ **Offshore wind PPAs contain 2.5% fixed price escalators**
- ✓ **Production tax credits⁽²⁾ are inflation adjusted**
- ✓ **Industry-leading energy management capabilities**
- ✓ **24/7 operations, maintenance, dispatch, & load balancing for 78 operating wind, solar and thermal assets**

(1) Includes Onshore & Offshore Wind, Solar, Thermal (excluding hydro)

(2) \$29/MWh for facilities placed in service before 2022 and \$30/MWh for facilities placed in service starting 2022. Bonus credits are available for projects that meet domestic content and energy community requirements.

Offshore Vineyard Wind 1

Nation's first utility-scale offshore wind energy project, with 806 MW installed capacity

PROJECT'S BENEFITS

- ✓ **Project currently ~80% completed**
 - ✓ **400,000** homes powered
 - ✓ Ratepayer savings: **\$3.7B** in energy related costs
 - ✓ **Thousands** of local full-time equivalent jobs created
-
- ✓ Estimated construction cost of \$4.5B
 - ✓ **PPA:** 400MW contracted at \$74/MWh and 400MW at \$65/MWh
 - ✓ Revenues including PPAs +RECs amount to **\$88.77 on average** (20 yrs)
 - ✓ **\$2B Tax Credits received**
-
- ✓ **First power achieved in December 2023**
 - ✓ **Estimated commercial operation date in December 2025**

Located 15 miles off the coast of Massachusetts

Renewables P&L Components (US GAAP)

| | |
|--------------------------|---|
| Gross Margin | <ul style="list-style-type: none"> + Wind & Solar (~80% of Renewable Gross Margin in 2024) <ul style="list-style-type: none"> ✓ Installed Capacity (MW) * Hours * Capacity Factor * Sale Price + Thermal & other [includes biomass contract revenues, transmission sales and limited proprietary trading] (~20% of Renewable Gross Margin in 2024) <ul style="list-style-type: none"> ✓ Includes Klamath (used to firm & balance loads for certain PPA contracts in the Northwest), biomass (contractual purchase of energy & resale from biomass facility owned by third party), transmission sales & limited proprietary power trading ✓ Tax equity (5-year recapture) |
| O&M Expenses | <ul style="list-style-type: none"> • 1/3 related to non-wind operational aspects (growth, thermal, corporate costs ...) |
| D&A | <ul style="list-style-type: none"> • ~28 year weighted average investment life for windfarms on a straight-line basis, net of ITC amortization |
| Other Taxes Expense | <ul style="list-style-type: none"> • Property, Franchise, and Payroll Taxes |
| Other Income & Deduction | <ul style="list-style-type: none"> • Consists of: Finance income (primarily capitalized interest) combined with gains on non-current assets, offset by other deductions (non-service pension costs & charitable giving) |
| Interest Expense | <ul style="list-style-type: none"> • Financial expenses on intercompany debt and any other borrowings; excludes TEI financing costs, included within Minority interest under HLBV accounting |
| Income Tax | <ul style="list-style-type: none"> • MACRs tax treatment allows wind & solar assets to be depreciated over 5 years, recorded in the tax line and captured through deferred tax assets • ITC & PTC can only be utilized at consolidated level & after NOLs are monetized <ul style="list-style-type: none"> ✓ PTCs generated over 10 years and can be used over 20 years ✓ AGR is considered one taxpayer. After the NOLs are monetized, annual PTC utilization is limited to 75% of the consolidated tax liability |
| Minority Interest | <ul style="list-style-type: none"> • Minority Interest driven by HLBV accounting for tax equity structures; the HLBV method allocates earnings to the noncontrolling interest, which considers the cash & tax benefits provided to the tax equity investors |

Accounting criteria

PTC

- **P&L**
 - ✓ **GAAP:** For periods after 1/1/2018, PTCs with Tax Equity are indirectly included in Net income/(loss) attributable to non-controlling interests and retained PTCs are booked in the income tax line. Prior to that, PTCs with Tax Equity were booked in revenues and retained PTCs in the income tax line.
 - ✓ **IFRS (projections):** All PTCs are booked in revenues.
- **Balance Sheet**
 - ✓ For periods after 1/1/2018, PTCs with Tax Equity reduce 'Non-controlling interests' in the Equity section. In prior periods, PTCs with Tax Equity reduced 'Tax equity financing arrangements - VIEs' in the Non-current Liabilities section.
 - ✓ Retained PTCs reduce deferred income taxes.
- **Cash Flow**
 - ✓ Retained PTCs hit the 'Deferred taxes' line in Cash Flow from Operating Activities.
 - ✓ For periods after 1/1/2018, PTCs with TEI impact the 'Distributions to noncontrolling interests' line under Cash Flow from Financing Activities. For prior periods, PTCs with TEI impacted 'Payments on tax equity financing arrangements'. These lines include payments of PTCs and remaining debt/equity.

ITC

- **P&L**
 - ✓ **GAAP:** Booked on D&A (they lower D&A), below EBITDA
 - ✓ **IFRS (projections):** Booked as Other Operating Income, above EBITDA
- **Cash Flow**
 - ✓ ITCs provide an initial deferred tax benefit equal to 50% of the total ITC, recognized in year one

Tax Equity

- Wind farms under tax equity structures are **fully consolidated** in the consolidated balance sheet and the results of their operations (including depreciation) are reported in the consolidated statement of operations. Investors share is reported as Minority Interest
- Recorded as a **financing obligation** & amortized with the allocation to the tax equity investor of its share of cash distributions, MACRS, PTCs, & the tax impact of taxable income

Federal Renewables Tax Incentives - IRA

| Before 2033 ⁽¹⁾ | 10 yrs. later | 30% |

() With Domestic Content & Energy Community bonus placed in service after 2022 – maximum 50% ITC. Energy communities are being pursued with the White House, DOE, states & Treasury. The expansion may allow inclusion of ports and O&M buildings as energy communities are dependent on location to gain the bonus tax credit.*

** With Domestic Content & Energy Community bonus placed in service after 2022 – maximum 120% PTC*

** With Domestic Content & Energy Community bonus placed in service after 2022 – maximum 50% ITC*

- Projects started more than 59 days after IRS guidance issuance subject to wage/apprentice rules to get maximum credit (otherwise only 20% of maximum).
- Hydrogen credits up to \$3/kg (or 30% ITC) available for hydrogen production facilities in service after 2022 (same wage/apprentice rules apply).
- Credits generated after 2022 may be transferred to third parties for cash from existing and new projects (including in TEI structures).
- Direct pay only available for tax exempt entities other than hydrogen facilities (PTCs only generated in first five years for hydrogen facilities).
- Various projects may qualify for energy community credit (10% maximum).
- Bonus credits above do not include additional Low Income Community credits available in limited locations with less than 5 MWh projects.

Inflation Reduction Act is under review by the Government, and the outcome could impact the rules stated above

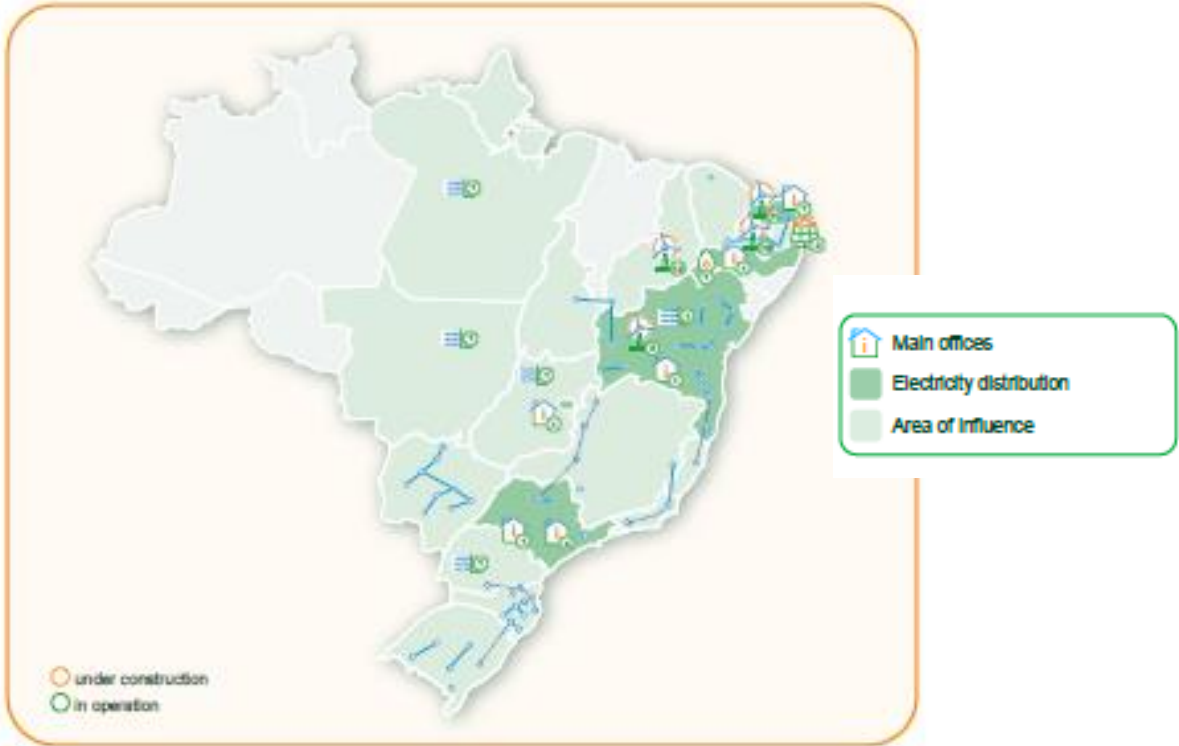

(1) Tech neutral projects phase out of credits begin after 2033 based on emissions.

Iberdrola Mexico: Electricity Production & Customers

Recent developments

Iberdrola's stake after the transaction of 13 power plants

- In **February 2024**, Iberdrola sold **55% of their business** in Mexico for \$6.2 billion USD. The transaction included **twelve combined cycle power plants**, representing an installed capacity of **8,436 MW**, and **one wind farm** with a capacity of **103 MW**.
- After the transaction, Iberdrola's has **15 power plants** with **2.600 MW** of installed capacity.

| Technology | Capacity | Quantity |
|---------------------|-----------------|----------|
| Renewables | 1,233 MW | 9 |

Regulatory Framework 2013- 2024

- ✓ The Wholesale Electricity Market (MEM) was created in 2014 and began operations in 2016.
- ✓ In October 2024, a Constitutional amendment on energy was approved with the objective to strengthen CFE while maintaining the fundamentals of the current regulatory framework.

Wholesale Electricity Market Structure

Electricity Industry Law (LIE)

Constitutional Reform: Allowed private participation in generation and supply activities. However, Transmission and Distribution (T&D) are defined as Public Service to be provided solely by CFE.

Electricity Industry Law (Ley Industria Eléctrica or LIE)*:

- Establishes competition in generation and supply to large users.
- T&D and supply to domestic consumers remained in hands of the State through CFE.
- A new Wholesale Electricity Market was created based mainly on PJM and ERCOT models.

Energy Transition Law (Ley de Transición Energética): Legal basis to promote energy development based on the long-term economic model.

**An amendment to the LIE was published in 2021, its enactment hasn't taken place due to amparos granted to private parties.*

Electricity Industry Law (LIE)

Grandfathering rights to previous permits

A legacy regime in place to **protect the terms under self-supply** and **IPP permits were granted**. Power plants under this regime would migrate to the Wholesale Electricity Market once their interconnection contracts expire.

Industrial Consumers

Qualified industrial and large **consumers are free to choose their supplier** under market conditions.

Exempt Generation

Up to 0.5 MW does not require a permit from CNE.

Wholesale Electricity Market (MEM)

Started operation in 2016. Features economic dispatch, short-term markets (day ahead, hour ahead and real time), **nodal pricing, capacity and energy prices**, as well as **long- and medium-term auctions**.

The **regulated basic supply tariff** includes **variable and fixed costs**, covering generation, transmission, distribution, and supply, while also addressing requirements for **liberalized clients** and the **qualified supply tariff framework**

Regulated Tariff
Suministro Básico

Additive tariff incorporates the costs of all the activities in the system. The Federal Government set the target of maintaining the **basic supply tariff throughout the six-year period**.

Components of the additive tariff:

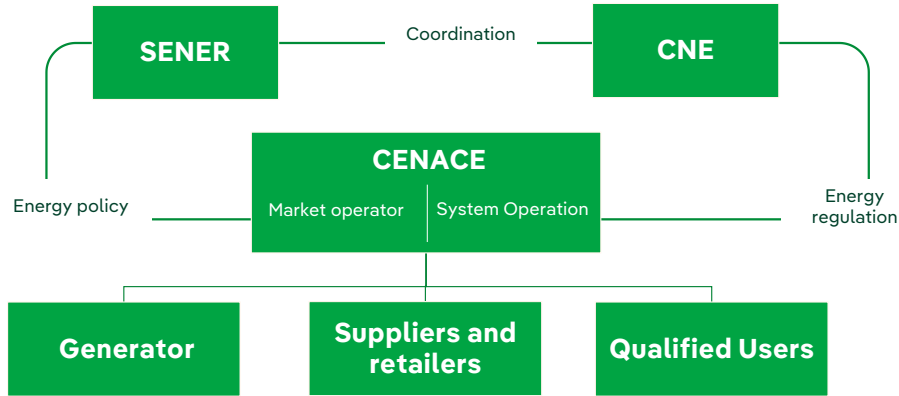

Regulated Tariff
Suministro Básico

- Supply to liberalised clients (**demand >1 MW**)
- Requirements for **long term hedging with Iberdrola power plants** defined by Comisión Reguladora de Energía (CRE)
- **Qualified supply tariff:**
 - **Fixed costs:** According to regulated cost of the basic supply tariff (suministro básico)
 - **Variable costs:** According to the generation portfolio that supplies Iberdrola Clientes in the market.

Regulatory framework after 2025 energy reform

In March 2025, the secondary laws to implement the energy reform of 2024 was published, including the new Electric Sector Law (LESE). The Electric Industry Law remained in force until that date.

Electrical Sector Law

- **Replaces the 2014 Electric Industry Law (LIE)**, maintaining the wholesale electricity market structure, economic dispatch, and products (Energy, Capacity Market, and Clean Energy Certificates).
- **The Energy Regulatory Commission (CRE)** is transformed into CNE (National Energy Commission).
- **Binding planning based** on a 54% vs 46% criterion, with pending public policy to foresee mechanisms for permit granting, storage, and implementation.
- **Energy justice** aims to reduce inequalities in access to energy, ensuring fair tariff without increases above inflation.
- **Simplification of processes and procedures**, including a single-window service for investor follow-up.
- **New regulated activities:** energy storage, cogeneration, and electromobility infrastructure.
- **The new regulation maintains:** the regulated tariff, self supply business, qualified supply tariff framework and ultimate resource supply.

Private generators schemes

- Wholesale Electricity Market (MEM)
- Long Term Energy Independent Producer
- Joint Venture (private generator – CFE/government)
- Self Consumption
- Exempt Generation
- Industrial Consumers

- Started operation in 2016. Features economic dispatch, short-term markets (day ahead, hour ahead and real time), nodal pricing, capacity and energy prices, as well as long- and medium-term auctions.
- PPA with CFE for the development projects with production exclusively to CFE.
- Development of projects between CFE/State with privates, where the CFE/State must have a 54% of participation.
- Isolated from the grid with a simplified procedure for permits ranging from 0.7 to 20 MW.
- Interconnected to the grid.
- Increased from 0.5 to 0.7 MW does not require a permit from CNE.
- Qualified industrial and large consumers are free to choose their supplier under market conditions.

Regulatory support framework

Hungary

Feed-in-Tariff (FiT)

- Defined by Decree No. 389/2007 with subsequent amendments.
- Electricity sold at fixed tariff during maximum 15 years, at fixed price updated annually with inflation. No possibility to exit the support scheme (may move to CfD scheme)

Merchant

- Windfarms with expired FiT
- Participation in the electricity market and Guarantees of Origin

France

Contract for Difference (CfD)

- Since 2016, defined by the Energy Code, articles L314-18 and following
- The duration of the contract is 20 years
- CfD attributed through auctions
- Tariff is indexed once before the commissioning and updated annually.

Feed-in-Tariff (FiT)

- Previous FiT defined under Arrêté 17/06/2014 and the Energy Code, benefits to onshore wind projects commissioned until 2016
- Support duration of 15 years
- Tariff is indexed once before the commissioning and updated annually.

Cyprus

Feed-in-Tariff (FiT)

- Defined under Law No. 112/2013 (later modified by 212/2015 and 157/2015). The feed-in tariff is limited to 20 years, but it may be extended for 5+5 years under some conditions.

Greece

Feed-in-Tariff (FiT)

- Defined by Law No. 3468/2006 (currently under Law No. 4254/2014). This scheme expired on 31 December 2015.
- The FiT agreement is limited to 20 years, and the FiT price depends on project details (technology, size, capex subsidy, installation on mainland or isolated islands, etc.). Due to reduction of FiT, under some conditions, it may be extended by additional 7 years with a revision on FiT price and a cap of NEHs. Projects have no market participation obligations

Feed-in-Premium (FiP)

- Defined by Law No. 4414/2016.
- Windfarms >6MW and PV projects enter into 20y FiP PPAs, awarded through neutral competitive tenders.
- Windfarms ≤6MW enter into 20-year FiP PPAs with administrative defined prices till 31.12.2025.
- Option for 2 years opt-out of first round FiP awarded projects with 2 years extension of FiP PPA

Merchant

- Windfarms with expired FiT
- Participation in the electricity market and Guarantees of Origin

Offshore Feed-in-Premium (FiP)

- Defined by Law 4964/22. Right for 20 years FiP to offshore pilot project 600MW by individual notification to EU. If not approval: participation in auctions for FiP. Rest offshore to be awarded FiP by auction

Regulatory support framework

Portugal

Feed-in-Tariff (FiT)

- Defined by DL 339-C/2001 and DL 35/2013
- FiT under DL 339-C/2001 limited to 15 years. Under Option B of DL 35/2013 (reinterpreted by order 6304/2021), wind farms opt to receive a FiT extension for 7 years with floor of 66,03€/MWh and cap of 87,44€/MWh (June 2020 prices), reviewed annually with CPI

Merchant + fee (Solar plants)

- Defined by Leilão 2019 rules
- Merchant (wholesale market or PPA) and payment of a fee (€/MWh) offered in the auction for 15 years
- By DL 15/2022 - test period up to one year (delaying the start of fee payment)
- By DL72/2022 - extension of test period one year more

Australia

Green Certificates (GC)

- Defined by Renewable Energy (Electricity) Act 2000 with amendments.
- Wind farms receive 1 GC/MWh produced out to 2030. Utilities must purchase GCs for ~20% of load, up to an effective cap price of AUD\$92/GC.

Long-Term Energy Service Agreement (LTESA) contracts

- Defined by Electricity Infrastructure Investment Act 2020
- Renewables can bid for 20-year “LTESA” contracts, comprising series of 2-year options for CFDs at a price sufficient to underwrite a portion of the project cost.

Capacity Investment Scheme (CIS)

- Defined by Industry Research and Development Act (2023 amendments)
- Zero emissions capacity can bid for 15-year collar contracts where if total revenues fall below the floor or above the ceiling, 90 % of losses and 50 % of gains will be shared with the government.

Poland

Green Certificates

- In 2005, Poland introduced this support scheme, which is regulated by amendments to the 1997 Energy Law and later by the Renewable Energy Sources Act with a RES quota set for each year. These put in place a green certificate system, with obligations for companies selling electricity to end users to redeem an annually determined percentage of certificates.
- Certificates are issued to green electricity generators and can be sold by them. Support scheme covers the electricity produced for a period of 15 years from the first electricity generation. As of July 2016, no new units entered the scheme due to replacing it with CfD auction scheme.

Contract for Difference (CfD)

- In February 2015, Poland adopted the so-called “Renewable Energy Law”. The law establish a technology neutral auction system with a Contracts for Differences for projects divided into technological baskets above and below 1 MW This system has a maximum duration of 15 years and is indexed annually to the Polish CPI. There is a maximum offer price each year.

Germany

Sliding Market premium scheme

- Sliding market premium for 20 year based on a non-indexed applicable value according the Renewable Energy Act (EEG). The premium cannot become negative and is not paid while DAM prices are negative during a period that depends on the award date.

Merchant

- Participation in the electricity market and Guarantees of Origin

All figures as of December 2024, except otherwise stated. Differences may arise due to rounding

Green Financing at the core

World private group leader in green bonds issued

Accountability

Use of proceeds guarantees transparency in impact and accountability

Assurance

Strict Reporting, SPOs and **external verification** to provide assurance

Taxonomy

Strict standards for the eligibility **fully aligned** with the Company strategy

Best in class format for investors

Asset base + energy transition = maximizing access to the green bond market

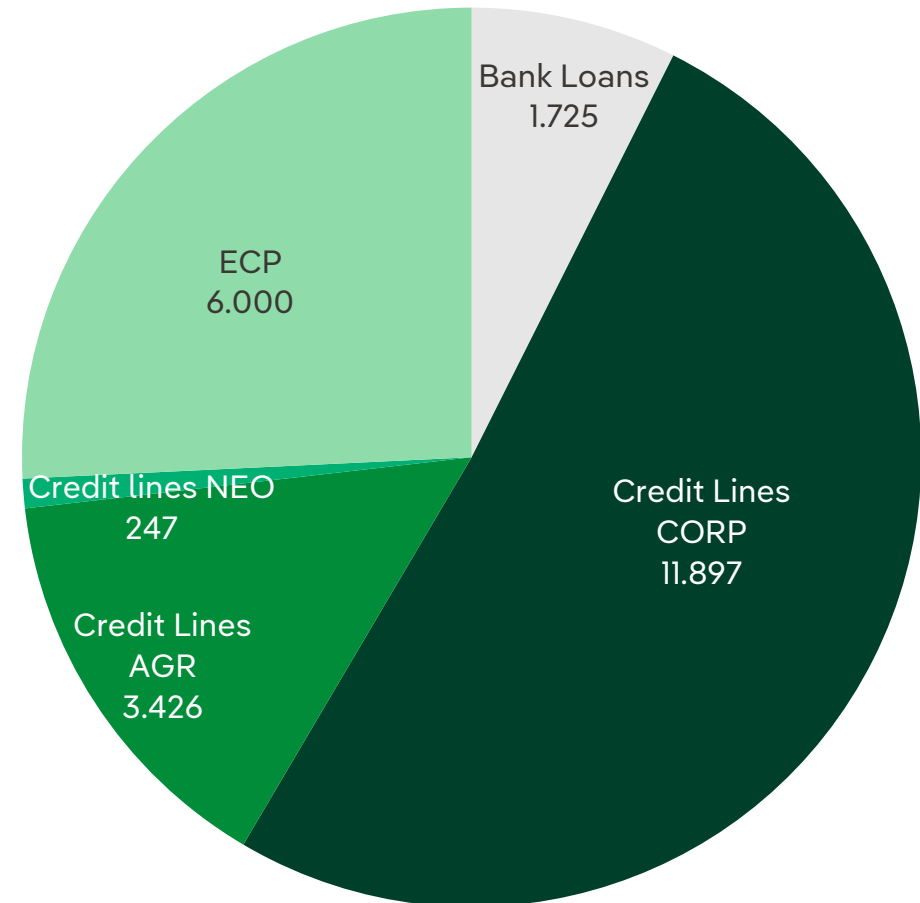

Green / Sustainable financing

Iberdrola is the world leading group in green bonds issued

GREEN FINANCING: EUR 36,758 M

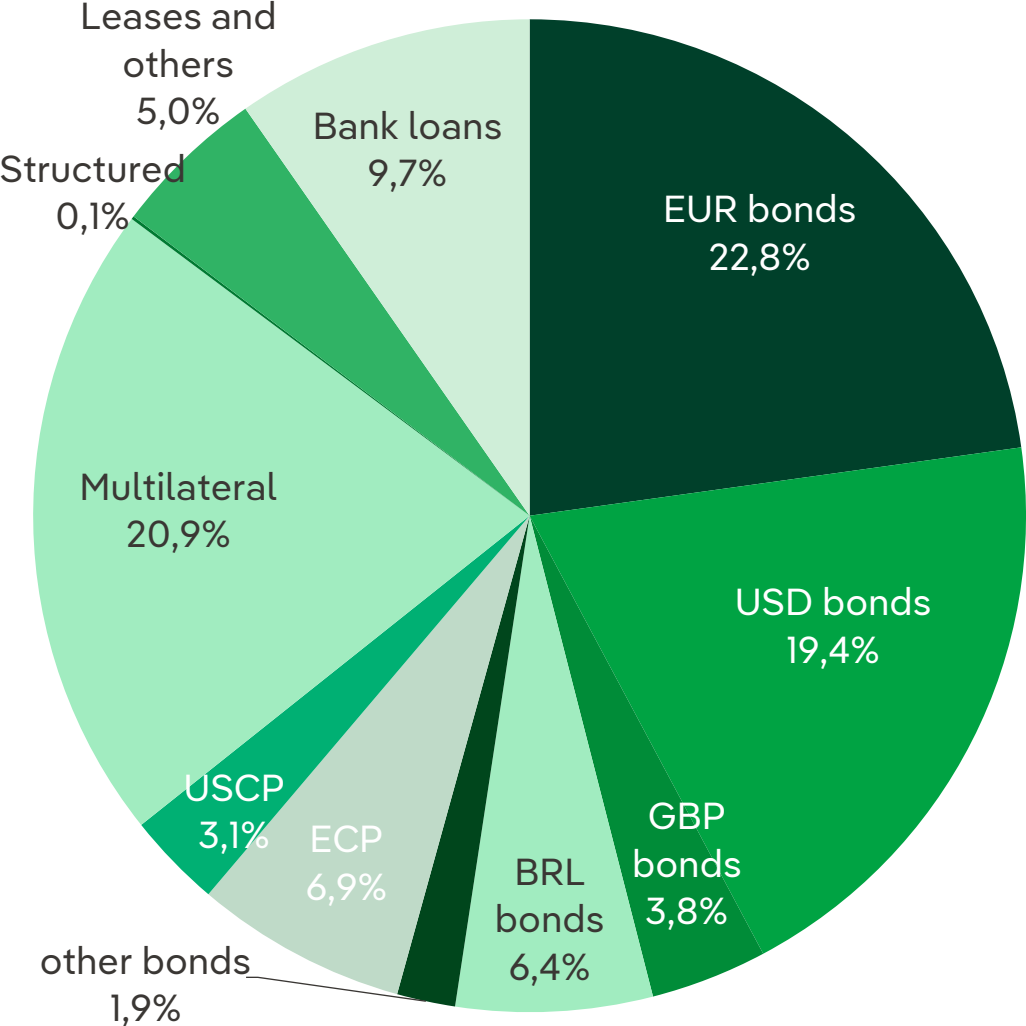

SUSTAINABLE FINANCING : EUR 23,295 M

In 2024, Iberdrola signed 1.8 Bn EUR of new sustainable transactions and 7.8 Bn EUR of new green financing for a total of 60.1 Bn EUR in sustainable financing as of December 2024

Financing markets diversification

Debt structure by market as of December 2024 (EUR 55.786 M)

Bond market

- Main source of LT financing
- Strong access to largest markets in the world
- Successful issuances in tailored markets (AUD, CHF, NOK, GBP) in better conditions than the EUR market

Multilateral lenders

- Long-term financing not subject to capital market volatility
- Solid links with traditional players (EIB, BNDES)
- Expanding relationship with new entities (IFC, ECAs).

Bank market

- Diversified, strong pool including main players, adding new banks in new geographies (Australia, Singapore)
- Low exposure in outstanding debt allows to increase bank risk in other instruments (credit, derivatives, letters of credit)
- Liquidity bank commitment ensuring future project finance

Hybrid market

- Commitment with current stack
- Low outstanding balance allows share to increase during the plan if needed

Hybrids amount outstanding: 9.05 Bn Eur

Maturity profile with an average debt life of 6 years

Maturity debt profile as of December 2024 (M EUR)

Strong credit metrics, with Adjusted net Leverage of 45.4% as of 2024 (from 44.2% in 2023)

Adjusted Net Debt¹ / EBITDA

FFO / Adjusted Net Debt¹

RCF / Adjusted Net Debt¹

Accounting solvency ratios aligned with rating agencies thresholds (BBB+ / Baa1)

(1) Adjusted for treasury stock derivatives with physical settlement which at the current date are not expected to be executed (Eur 995 M as of 2024 and Eur 82 M as of 2023)

(2) Excluding corporate transactions not included in 2024 Budget, this ratio would increase to 25.3%.

Note: ratings as of last available report

Cost of Debt

Total cost of debt (4.81%) lower than 2023, mainly due to improving financing rates in all geographies except for the Eurozone.

Gross debt financial cost by currencies (%)

| | 2023 | 2024 |
|-----|-------|-------|
| € | 2.7% | 2.9% |
| \$ | 4.8% | 4.6% |
| £ | 4.5% | 3.8% |
| R\$ | 11.4% | 10.9% |

Cost of Debt (%)

Structural Subordination

Our model is based on financing the Group needs from the Holding

Subordination ratio below 30% in 2024 in line with financial policy and historical levels

Direct access to cash flows from unlevered and fully owned subsidiaries (large part of Group's EBITDA ~ 2/3rds)

High visibility of centralized cash flows (regulated and long term contracted)

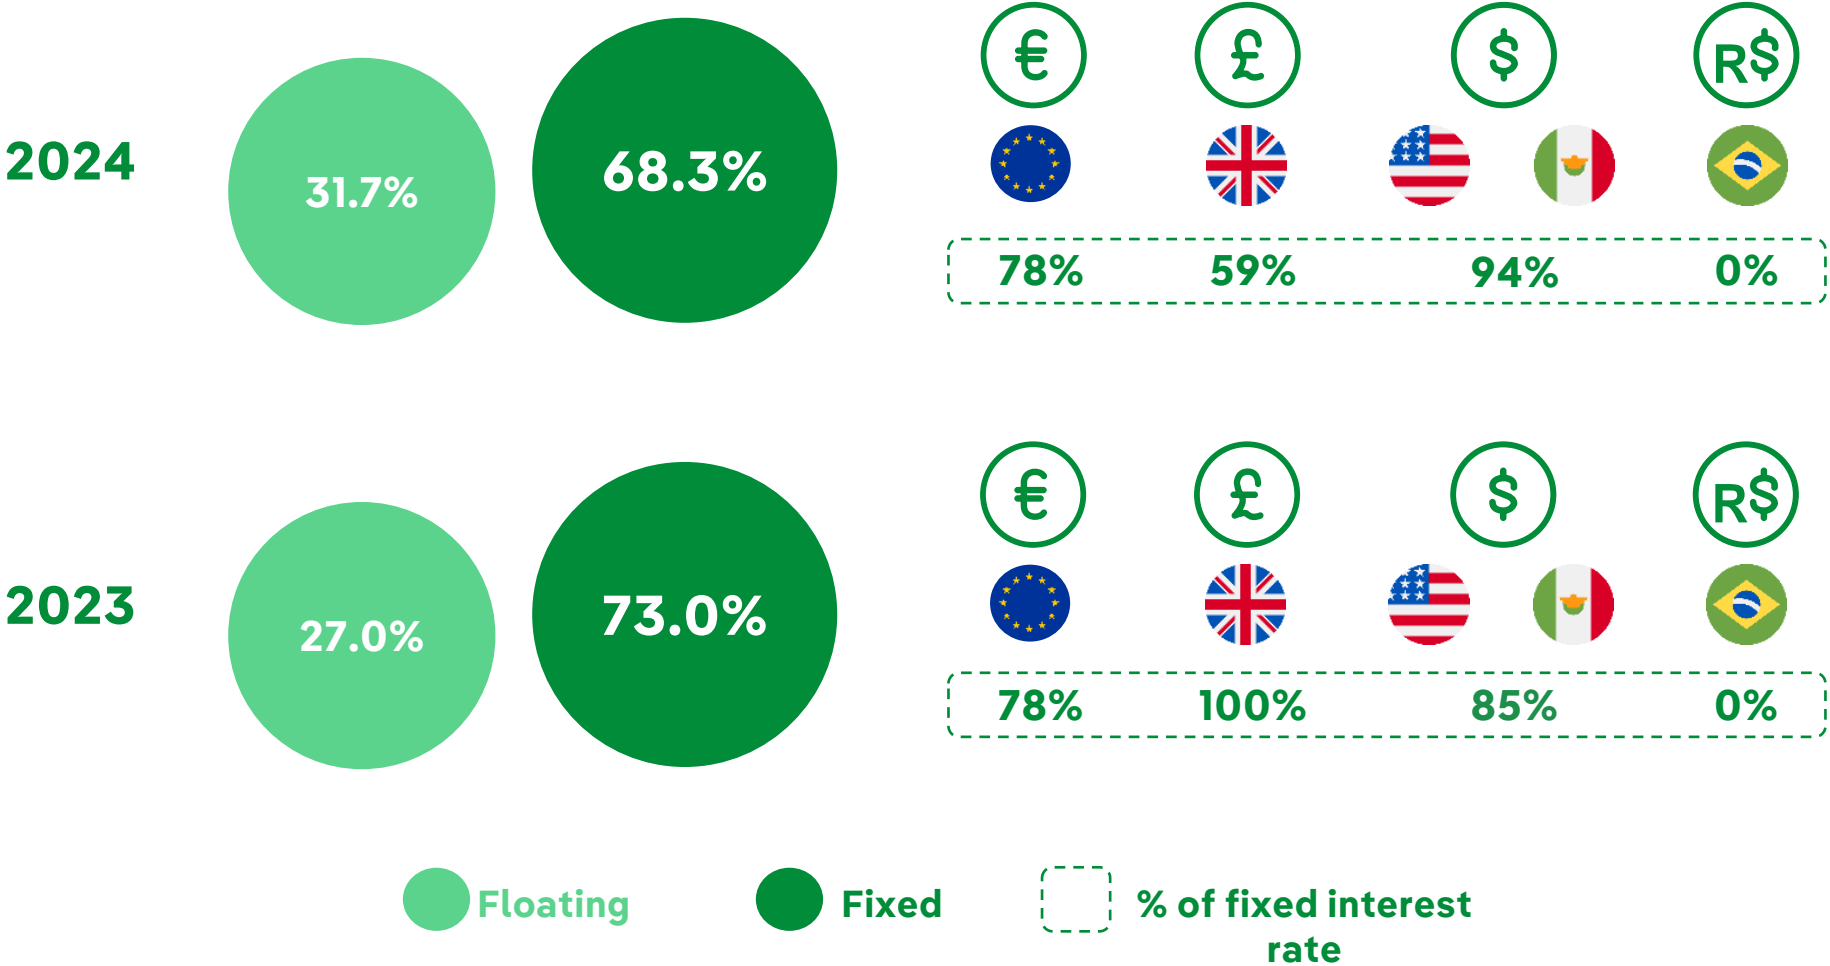

Centralized treasury and very strong liquidity at Holding

(1) Including 50% of hybrids and excluding Neoenergia

Interest rate risk management

Conservative while active management of interest rate risk aligned with our earnings structure.

FX risk management: structural

Structural Fx hedge as a result of having debt in the same currency and similar % as the funds from operations

Minimize FFO/Net Debt Ratio volatility

December 2024

FFO by currencies

■ EUR ■ USD ■ GBP ■ BRL ■ Other

Debt by currencies

■ EUR ■ USD ■ GBP ■ BRL ■ Other

... protecting the solvency and rating

FX risk management: annually

FX risk in the Profit & Loss account is hedged through derivatives

Hedging Net Income FX exposure in currencies against the Euro

Net Income FX risk is managed on a yearly basis

Long term FX management not possible as it would generate huge P&L volatility

Debt reconciliation

Note 22 of Iberdrola Consolidated Annual Report 2024

| Thousand euros | 31/12/2024 | 31/12/2023 |

| | | | Carbon footprint (location-based) | 42,842,935 | t CO ₂ eq |
| | 3. | GHG intensity of investee companies | GHG intensity of investee companies | 958 | t CO ₂ eq / M EUR |
| | 4. | Exposure to companies active in the fossil fuel sector | Share of investments in companies active in the fossil fuel sector | 89% 15% 0% | Capex Aligned with EU taxonomy Gas Revenues Coal / Oil Revenues |
| 5. | Share of non-renewable energy consumption and production | Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources | 99.7 % | Non-Renewable energy consumption | |
| | | | 37.1% | Non-Renewable energy production | |
| 6. | Energy consumption intensity per high impact climate sector | Energy consumption in GWh per M EUR of revenue of investee companies, per high impact climate sector | 3.17 | GWh / M EUR | |
| Biodiversity | 7. | Activities negatively affecting biodiversity-sensitive areas | Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas and there is not implemented any impact assessments or mitigation measure | This information is detailed in the Consolidated Non-Financial Information Statement (NFIS) and Sustainability Report 2024 (pages 136 - 142) | |
| Water | 8. | Emissions to water | Tonnes of emissions to water generated by investee companies per M EUR invested, expressed as a weighted average | This information is detailed in the Consolidated Non-Financial Information Statement (NFIS) and Sustainability Report 2024 (pages 122 - 129) | |
| Waste | 9. | Hazardous waste and radioactive waste ratio | Tonnes of hazardous waste and radioactive waste generated by investee companies per M EUR invested, expressed as a weighted average | 32,556 | t of hazardous waste |
| | | | | 406 | m ³ of Radioactive waste (medium and low activity) |

SFDR. Principal Adverse Impacts on sustainability factors

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS

| | | | | | |
|-----------------------------|-----|---|---|---|--|
| Social and employee matters | 10. | Violations of UN Global Compact principles and Organization for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises | Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises | This information is included in the Consolidated Non-Financial Information Statement (NFIS) and the Sustainability Reporting 2024 (Pages 294-299) which details Iberdrola's commitment as member of Global Compact (UN) | |
| | 11. | Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises | Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises | No | Policy on Respect for Human Rights (iberdrola.com) |
| | 12. | Unadjusted gender pay gap | Average unadjusted gender pay gap of investee companies | -2.8 | % |
| | 13. | Board gender diversity | Average ratio of female to male board members in investee companies, expressed as a percentage of all board members | 43 | % |
| | 14. | Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons) | Share of investments in investee companies involved in the manufacture or selling of controversial weapons | No | |

ESMA. Guidelines on funds' names using Sustainability-related terms

Fund names including terms related to **Transition/Social/Governance...**

| Exclusion criteria | Iberdrola |
|--|--------------|
| Companies involved in activities related to controversial weapons | Not involved |
| Companies involved in the cultivation and production of tobacco | Not involved |
| Companies violating the principles of the United Nations Global Pact or the Organisation for Economic Co-operation and Development (OECD) Guidelines for Multinational Enterprises (MNEs) | Not involved |

Fund names including terms related to **Sustainability/Impact/Environment...**

| Exclusion criteria | Iberdrola |
|--|---------------------|
| All criteria described for "Transition/Social/Governance" plus... | Not involved |
| Companies deriving 1% or more of their revenues from the exploration, mining, extraction, distribution or refining of hard coal and lignite | 0% |
| Companies deriving 10% or more of their revenues from the exploration, extraction, distribution or refining of petroleum-derived fuels | 0% |
| Companies deriving 50% or more of their revenues from exploration, extraction, manufacture or distribution of gaseous fuels | 3.2% ⁽¹⁾ |
| Companies deriving 50% or more of their revenues from generation of electricity with a GHG (Greenhouse gases) intensity greater than 100 gCO₂e/kWh | 5.7% |

(1) Excluding Retail business, if the percentage is included the total number is 9.5%.

Iberdrola is not impacted by any of the exclusion criteria; therefore, it qualifies as investible by any sustainable fund.

Sustainability in the 2024-2026 investment plan

Iberdrola will invest 41 Bn EUR by 2026 to accelerate electrification...

...with no capex allocated to new unabated carbon-intensive assets

Five Pillars: reaffirming our roadmap in sustainability

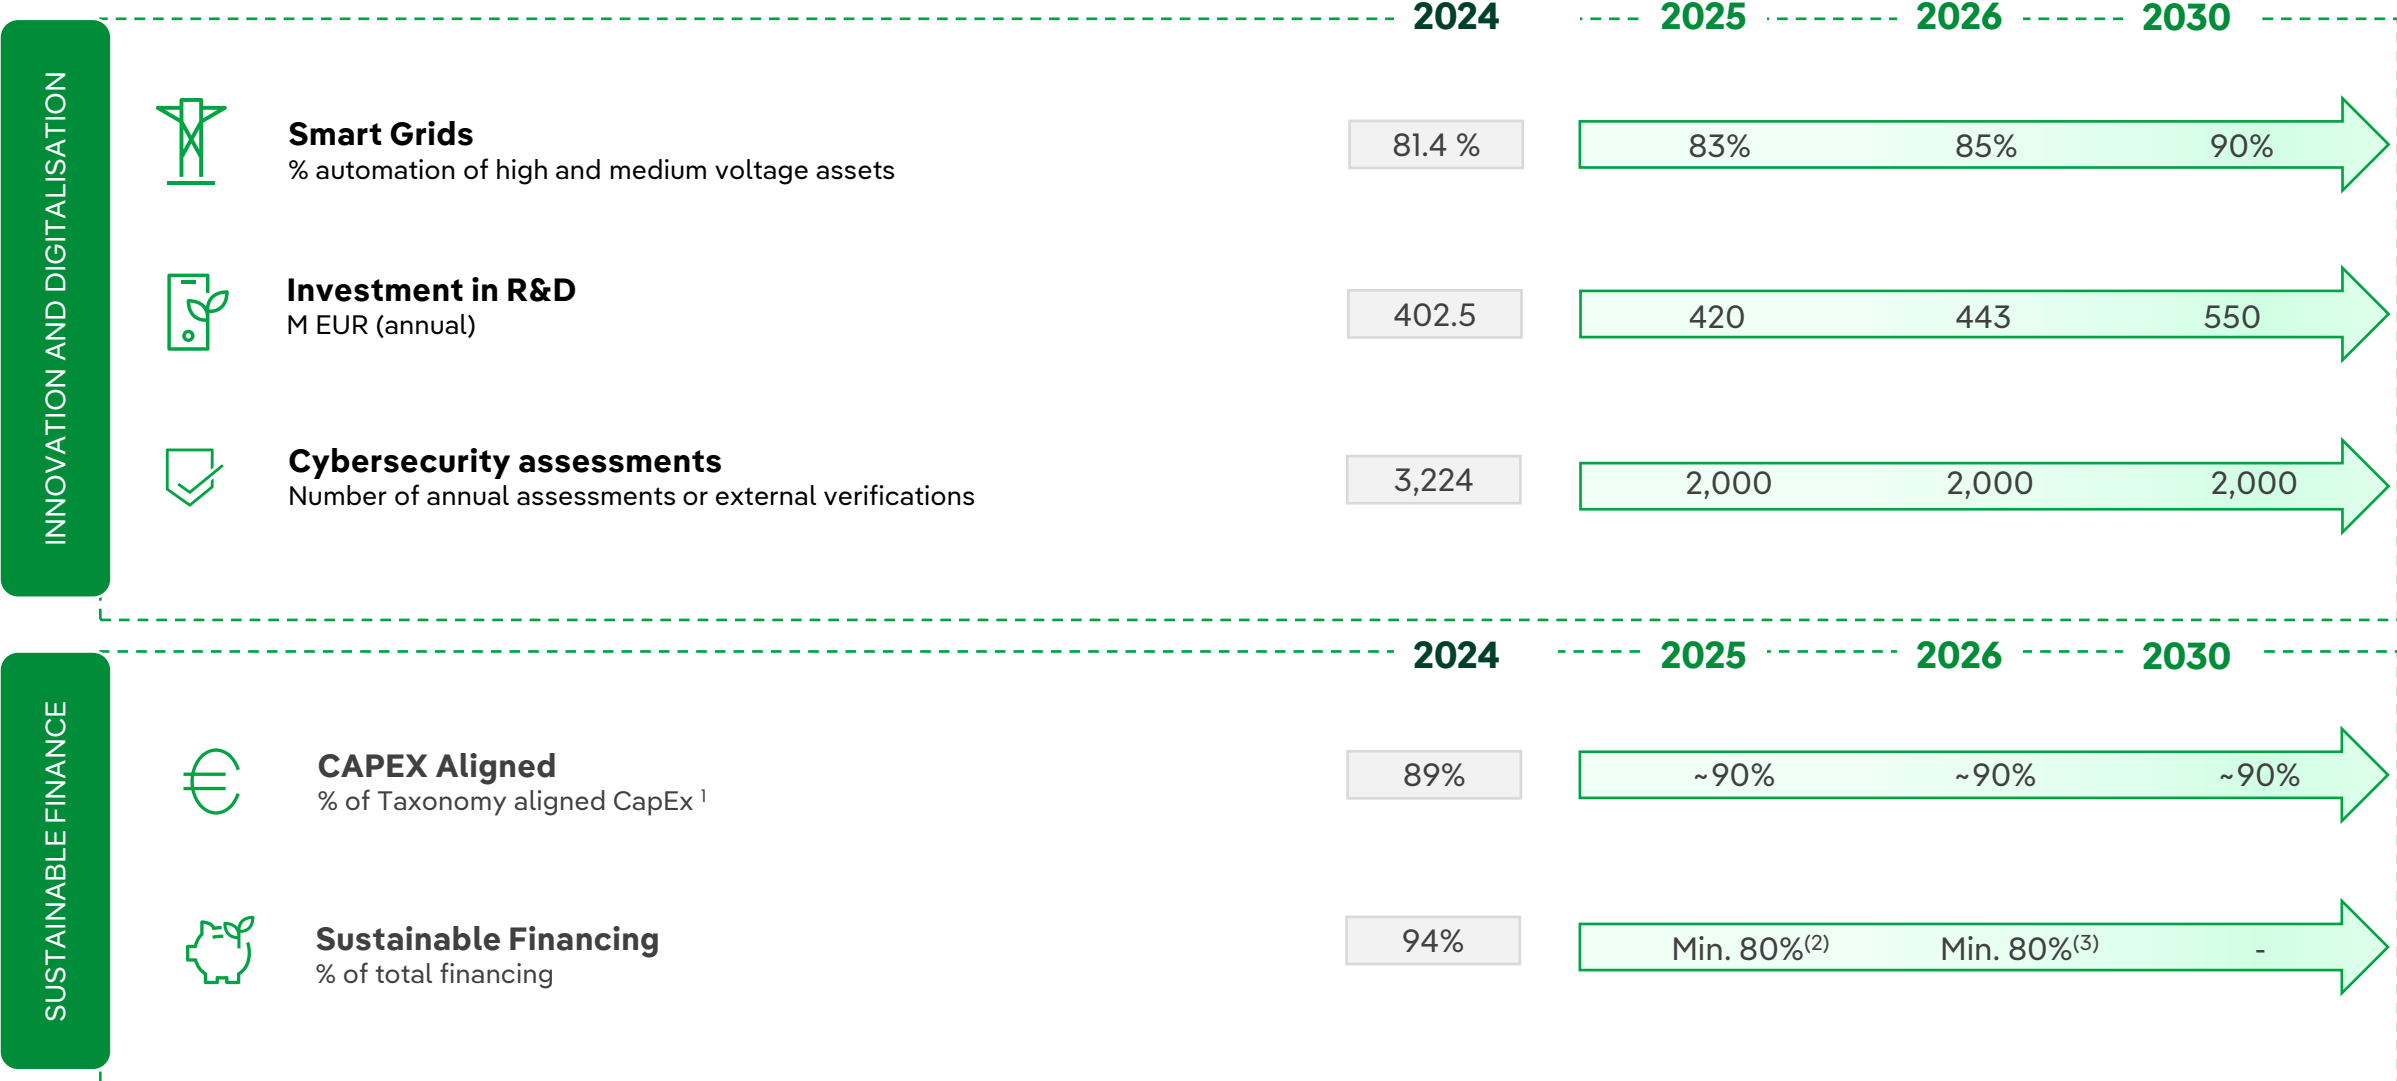

Pillar I. Boosting electricity as a clean, autonomous, local, stable, safe and competitive source of energy (1 of 2)

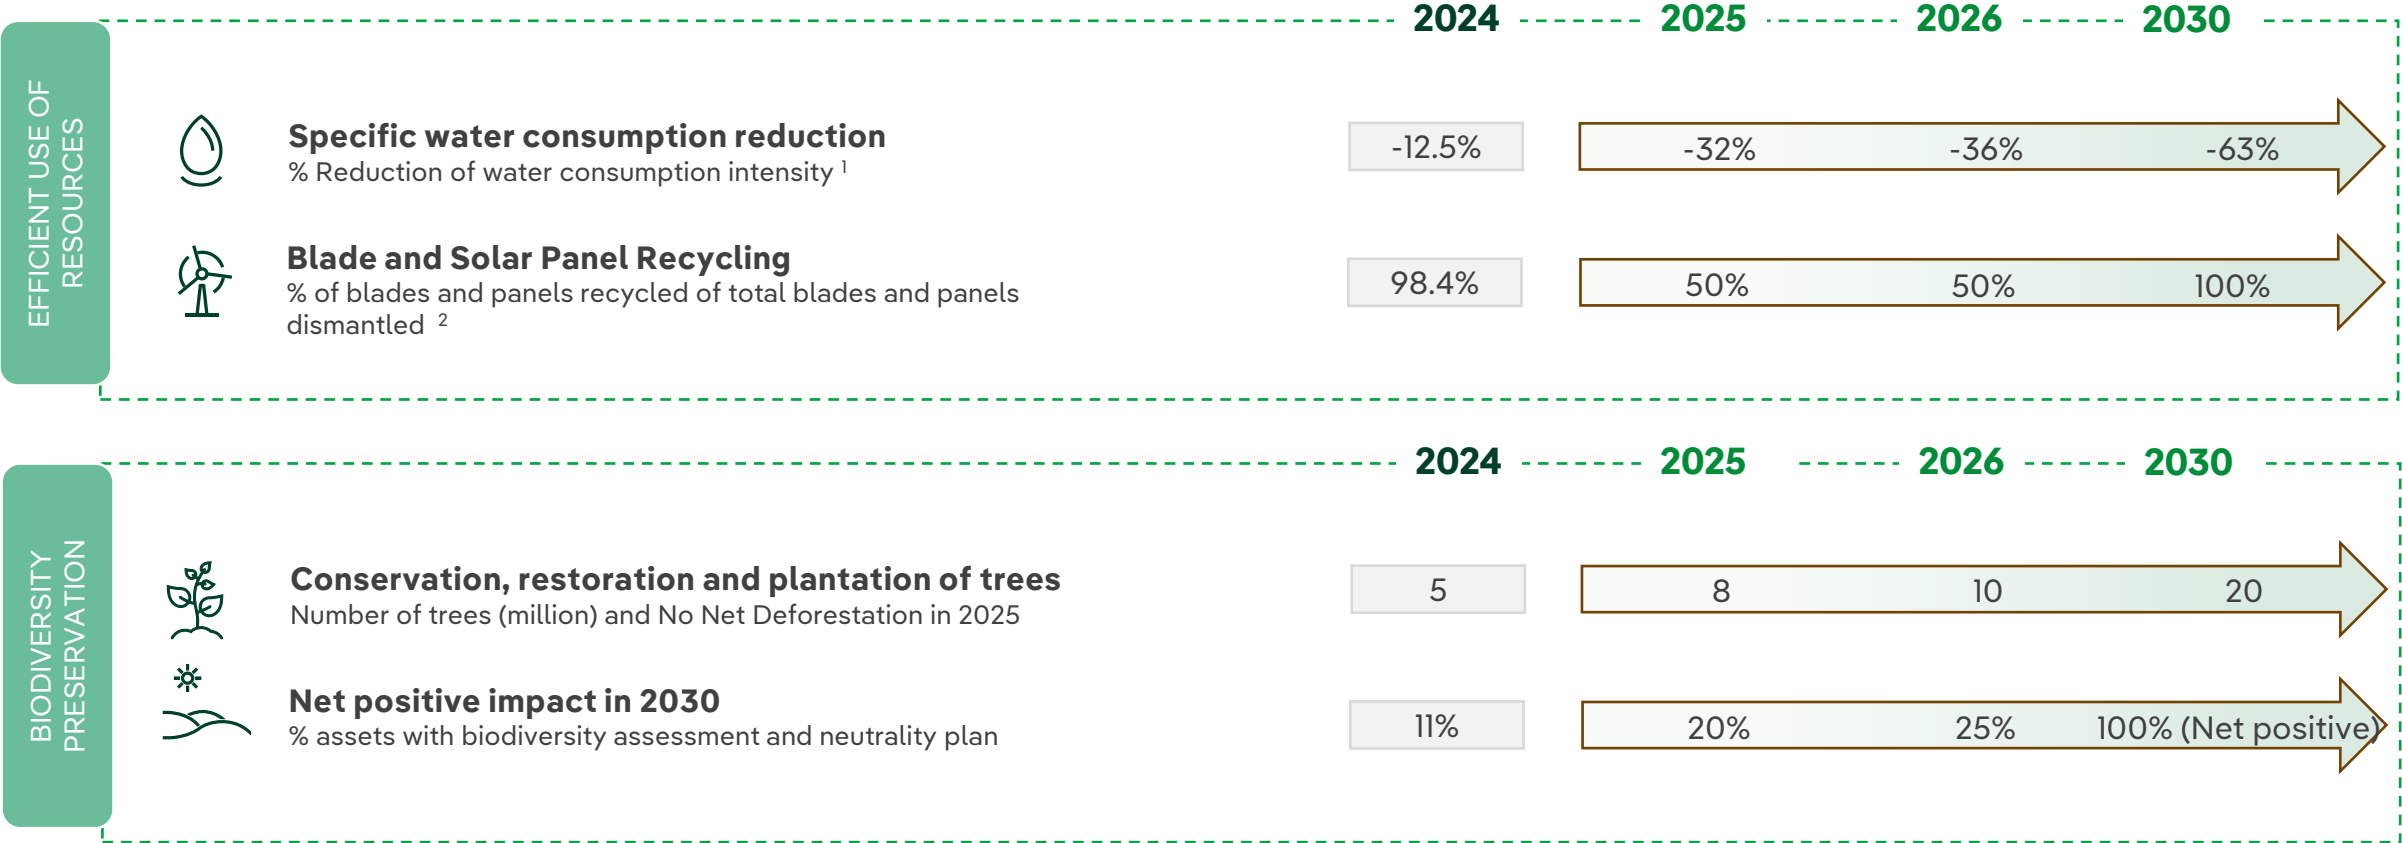

(1) <10 gCO₂/kWh
 (2) Interim target certified by SBTi (Science-based targets initiative).

Pillar I. Boosting electricity as a clean, autonomous, local, stable, safe and competitive source of energy (2 of 2)

(1) Organic CapEx; according to European Taxonomy Regulation
 (2) Average sustainable financing for 2023-25 period.
 (3) Average sustainable financing for 2024-26 period.

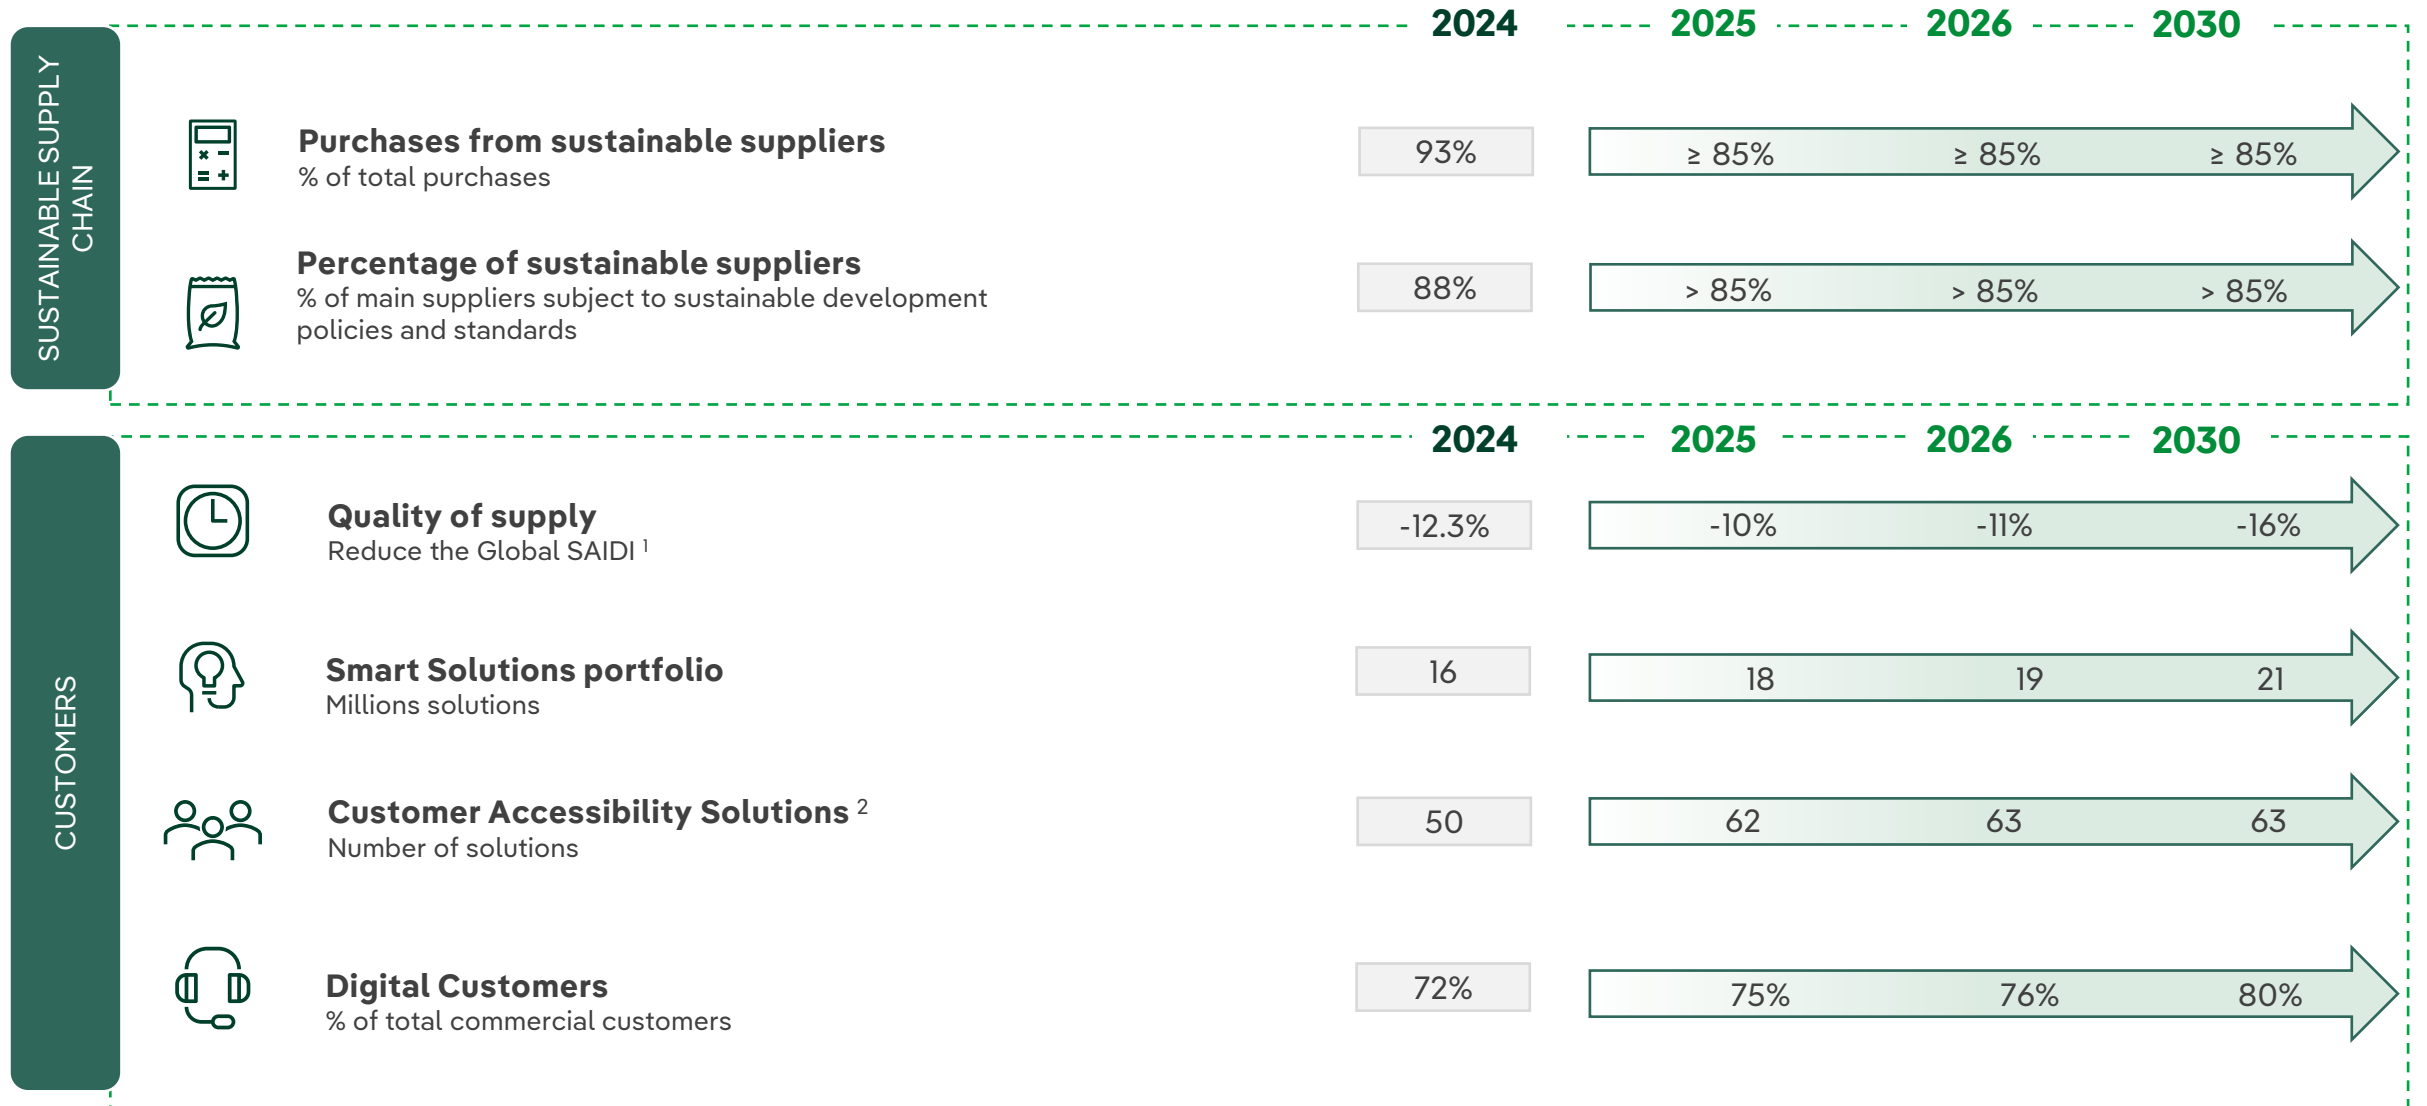

Pillar II. Protecting nature and fostering an efficient use of resources

(1) Calculated against the base year 2021

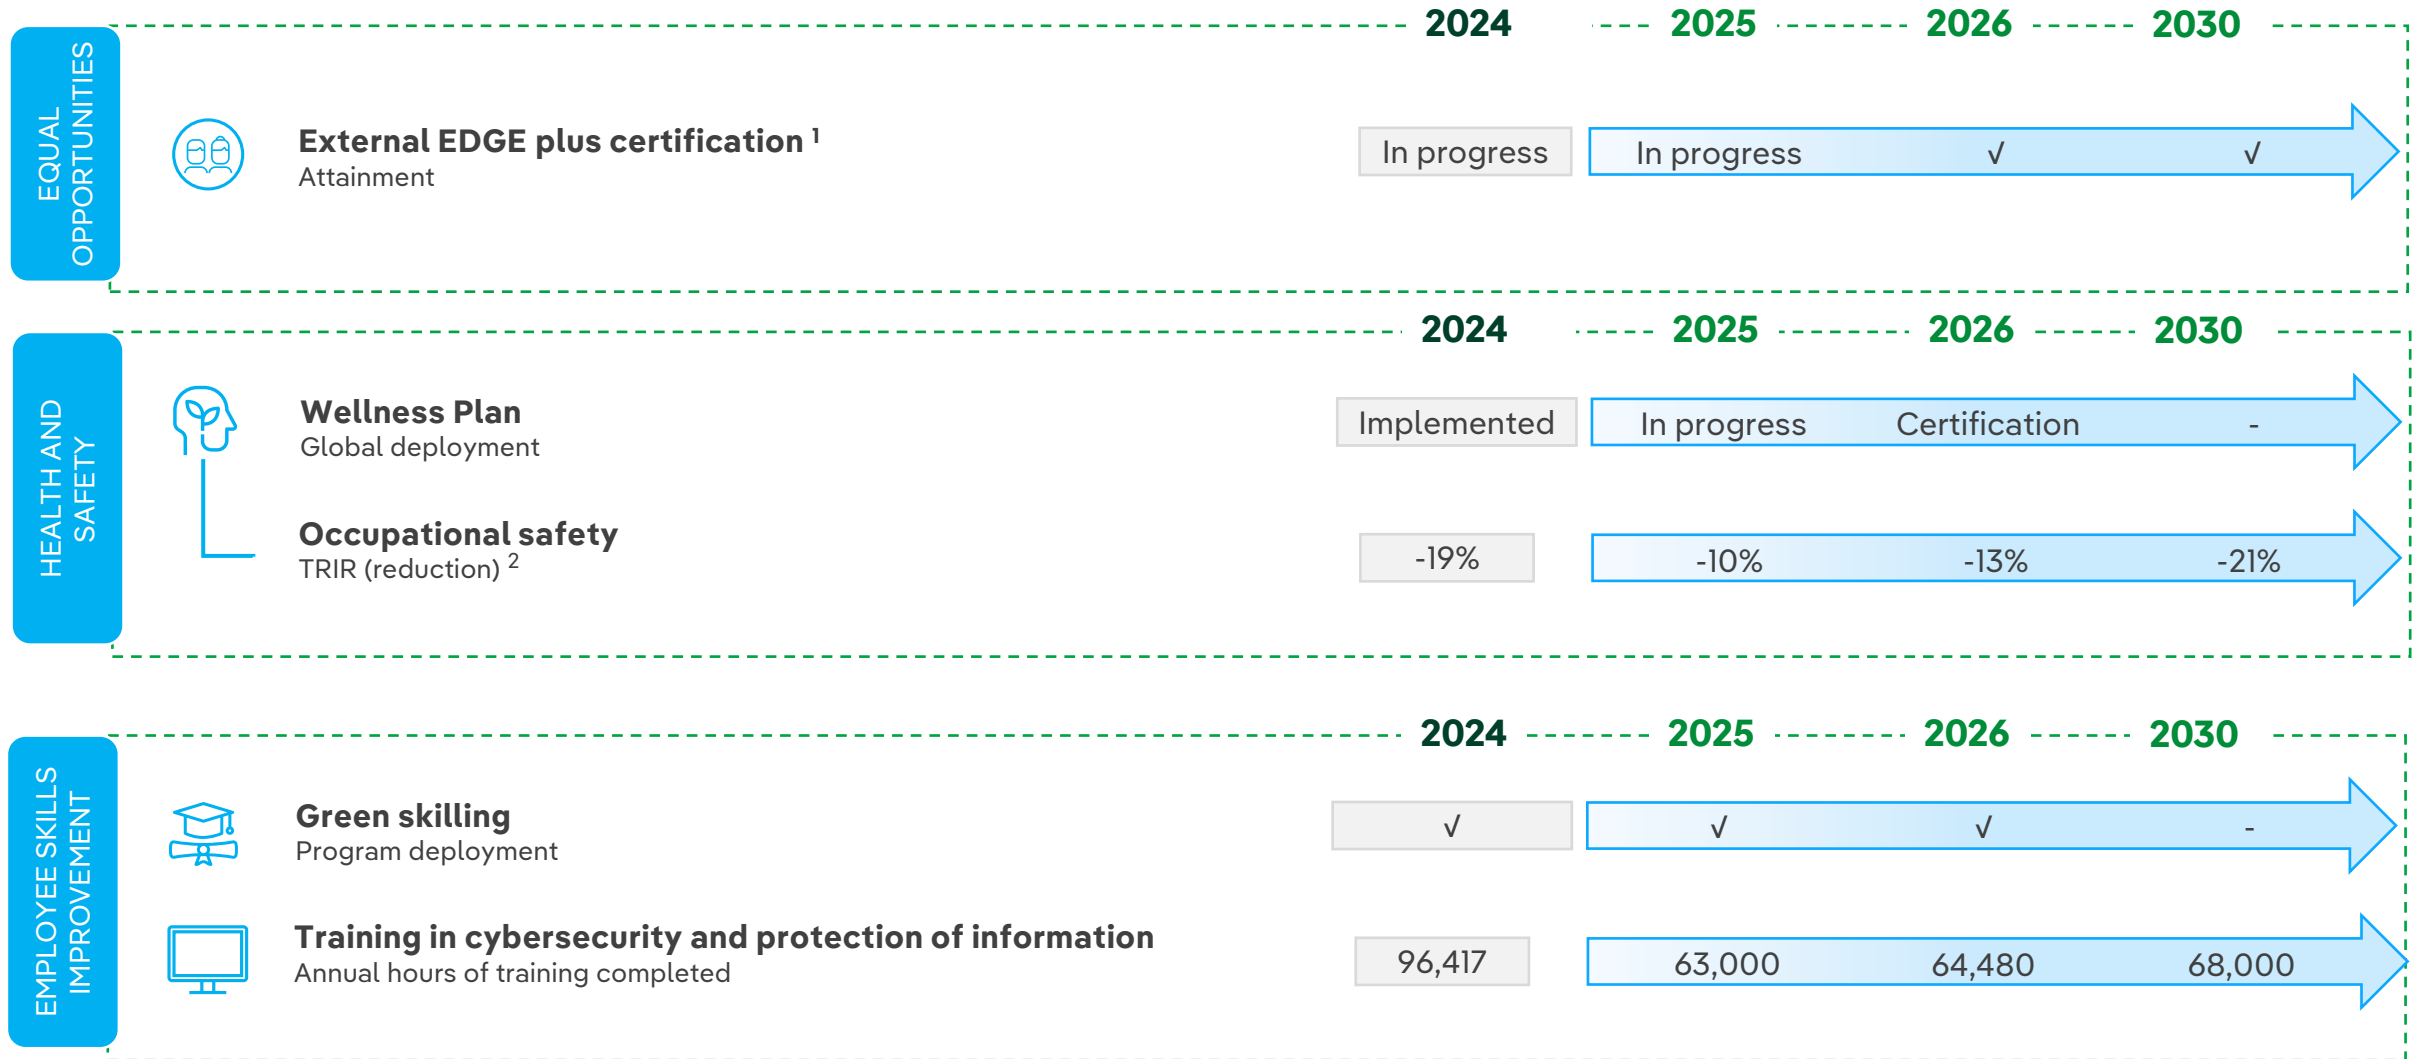

(2) Includes blades and panels out of operation with a destination decision different from disposal

Pillar III. Working to ensure a sustainable value chain

(1) Calculated against the 2019-21 period average
 (2) Including Neoenergia solutions from 2023 onwards.

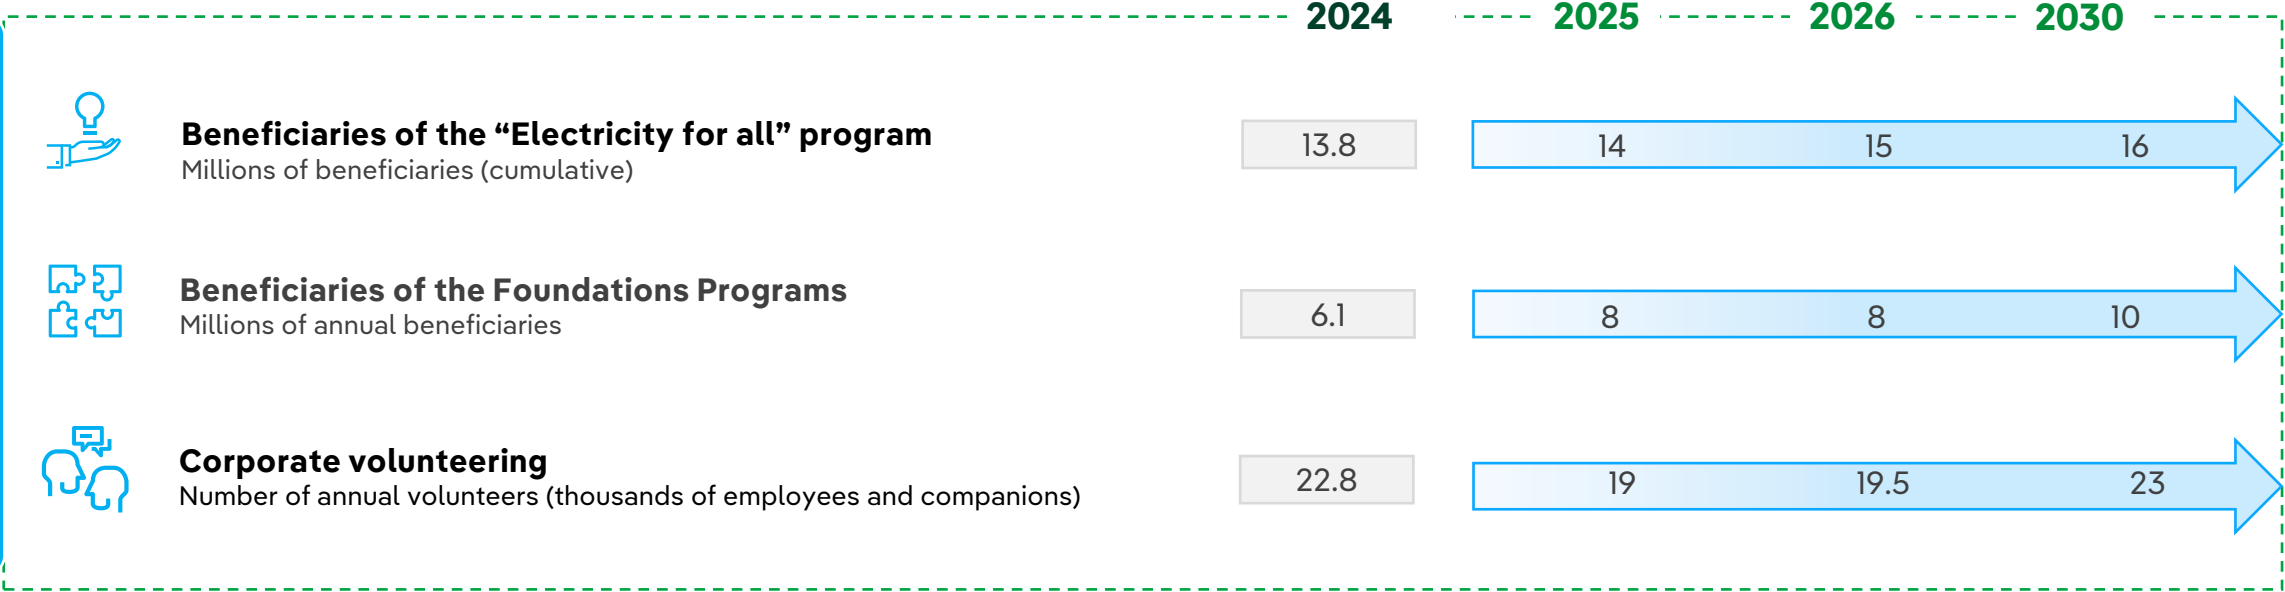

Pillar IV. Strengthening human and social capital (1 of 2)

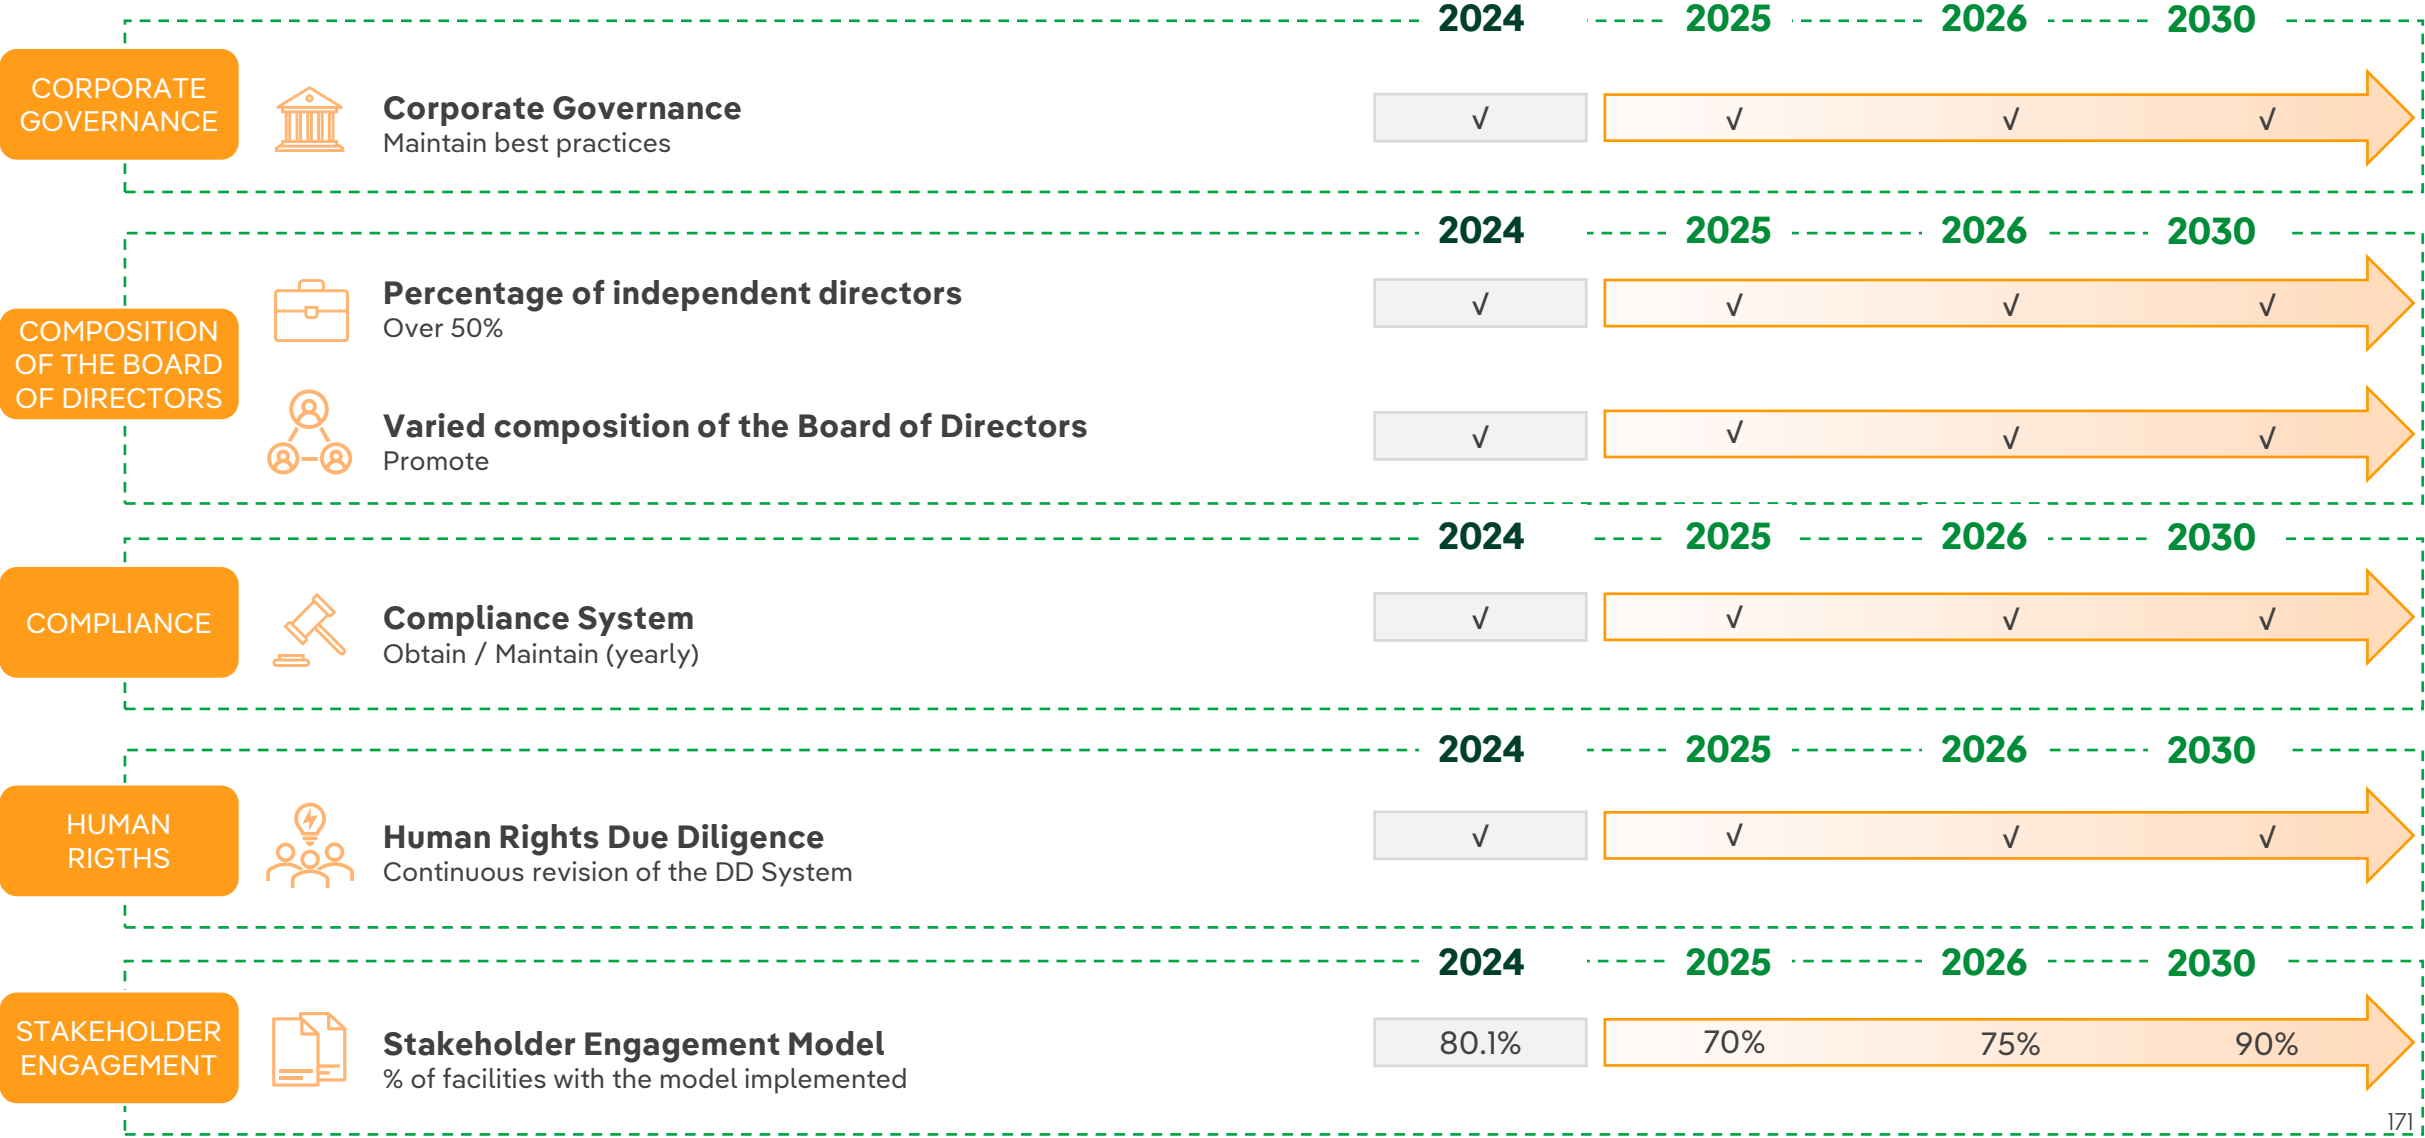

(1) EDGE Plus equal opportunities certification by 2026
 (2) Calculated against the base year 2021

Pillar IV. Strengthening human and social capital (2 of 2)

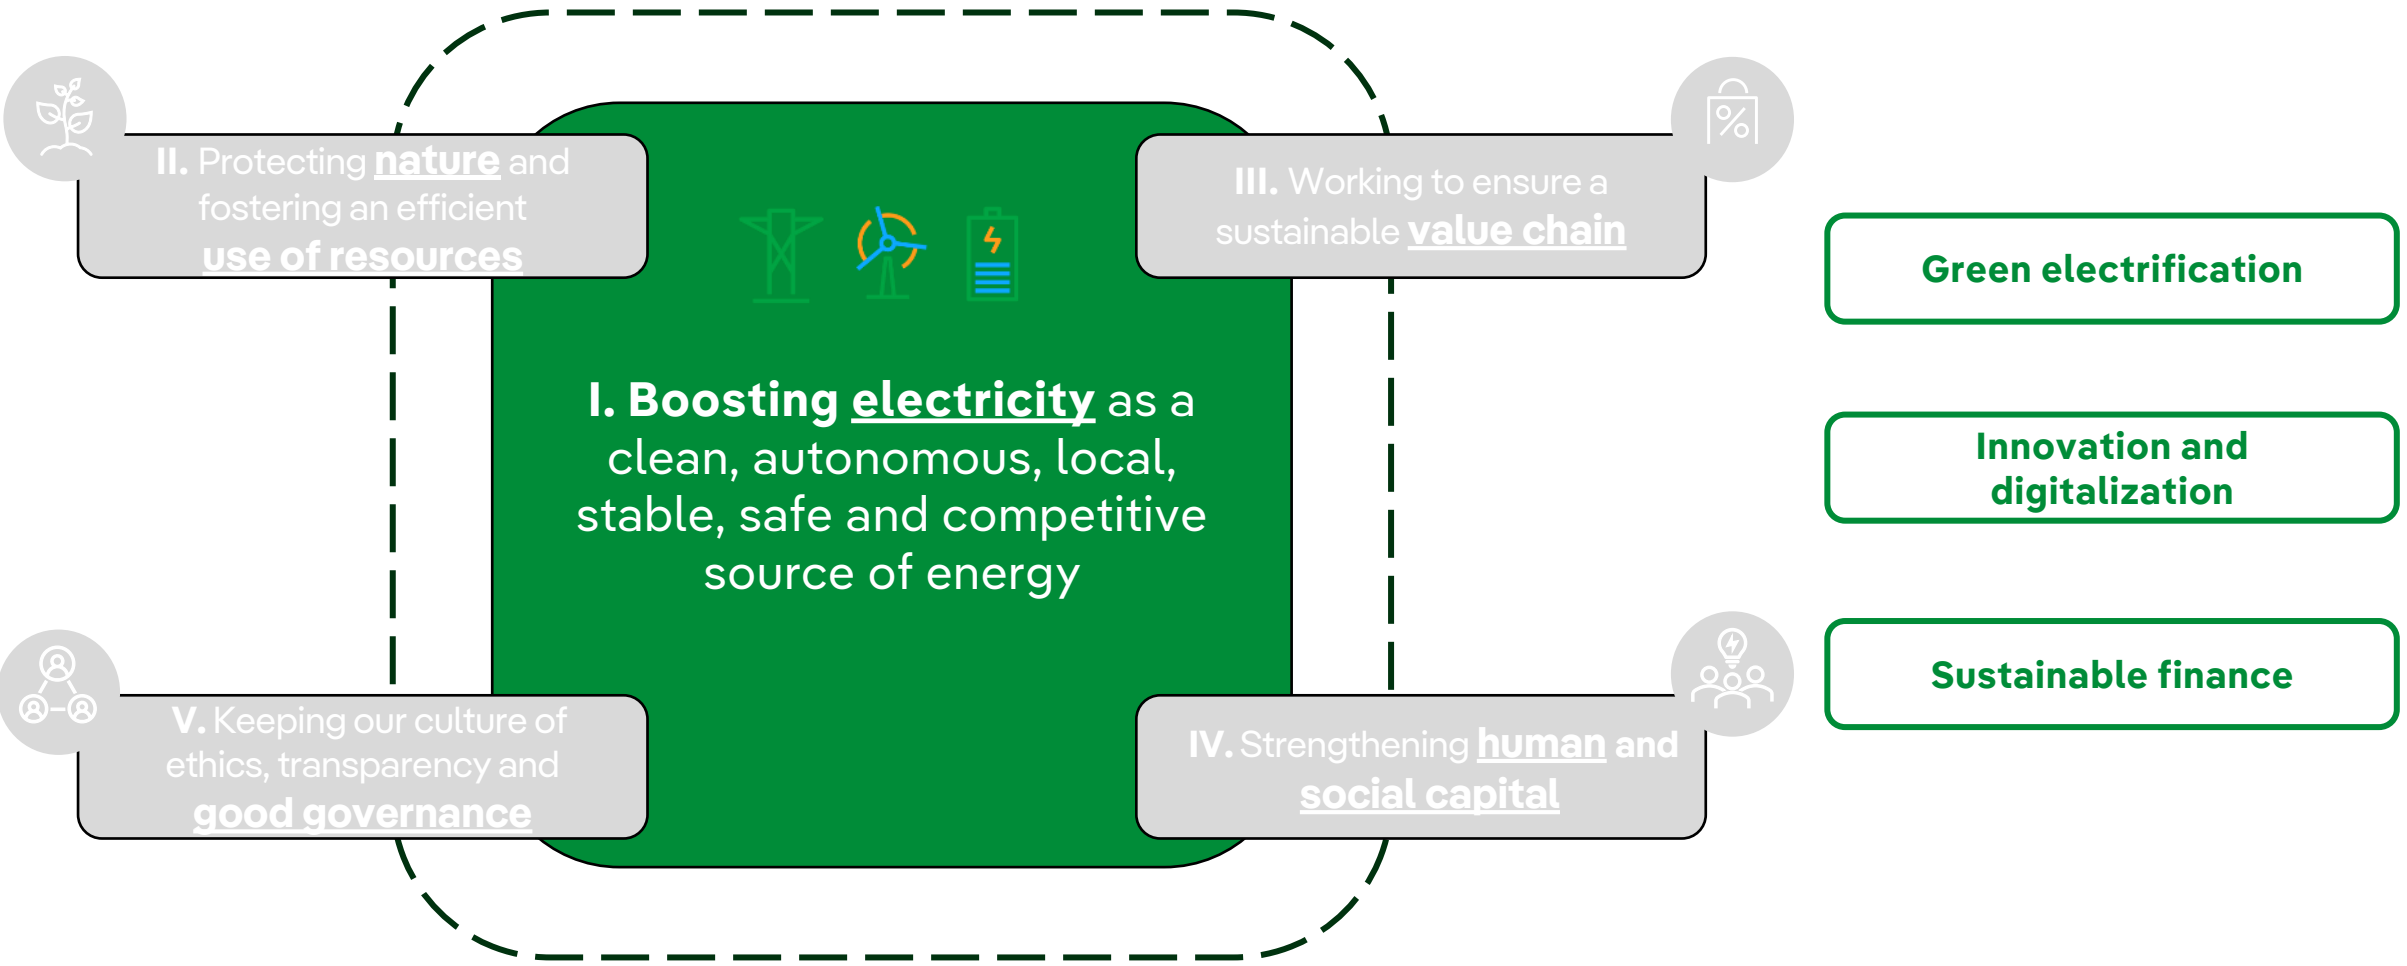

COMMUNITY DEVELOPMENT

Pillar V. Keeping our culture of ethics, transparency and good governance

Our roadmap in sustainability: Pillar I

Climate Action Plan: Key Elements

2030

<2040

Neutrality in emissions for scopes 1 & 2

Direct emissions (own generation and others) and indirect emissions from electricity T&D losses and own consumption

Net Zero emissions for all scopes, including 3

Scopes 1, 2 and 3 (other indirect emissions over which the group does not have direct control or influence)

Drivers

| | |
|--|--------------------------------------|
| 100% Renewables | 100% Intelligent networks |
| Green Procurement | Green solutions for customers |
| Alliances for green and decarbonized technologies | |

Values

| |
|-----------------------------|
| Positive for society |
| Positive for nature |

4.7 Bn EUR invested during 2024 in **renewables**

6.3 Bn EUR of organic investment in 2024 in **smart grids**

~5 Bn EUR of inorganic growth in **networks** in **UK & USA**

Alliances to promote **decarbonization**: Q-Cero, Net Zero...

Customer solutions as heat pumps, green hydrogen... technologies

Iberdrola's ambitious approach to the global climate agenda

Iberdrola embraces an ambitious and robust approach to climate advocacy

Active engagement within the most **relevant and ambitious** organizations

Leadership and active involvement in the main milestones of the **global climate agenda** (COPs, New York Climate week...)

Special implication and support to those **organisations with greater leadership** and relevance

Fostering connections among different actors to build **alliances** and collaboration platforms

Strong and dense network of alliances and collaborations with key actors in the global climate agenda

- Support to political milestones on the NDC's review process in the context of G20 summit, UNGA, Climate Conferences,...
- Support to Global Stocktake decisions' implementation (x3 RES,...)
- Support to COP 29 Presidency pledges (x6 networks...)
- Support a central role of the electricity sector within the EU Clean Industrial Deal...

Specific alliances to promote decarbonization

Alianza Q-Cero: to decarbonise thermal energy demand in Spain. *Launched in 2024.*

Alianza NET ZERO Mar: to accelerate the electrification of the maritime-port sector.

pirVEp: Platform for Heavy Vehicle Charging Infrastructure.

Increasing production from renewables sources

2024 emission-free installed capacity (%)

84%

2024 emission-free production (%)

84%

2024 Generation Revenues
Coal, Nuclear & Gas / Total Revenues (%)

Specific CO₂ emissions from facilities in Europe⁽¹⁾

(1) The figure of 38 g of CO₂ in this graph refers to the emissions generated by Iberdrola's facilities in Europe in 2024. Both the European average carbon factor and the data from the rest of the companies are based on Climate Change and Electricity: European carbon factor. PwC France. Dec. 2024 and, in the case of companies, they only include the European space for the year 2023.

Iberdrola is the world's largest electricity company without coal-fired production and its **CO₂ emissions are at 38 g/kWh in Europe**, 81.3% lower than its European competitors.

Absolute emissions

100%
Emissions covered with absolute emissions reduction SBTi targets

Emissions Intensity

Group emissions intensity at global level (gCO₂/kWh)

Pumped-storage hydropower key in energy transition

- **Price Moderation:** Produces energy when the system needs it most.
- **Efficient Storage:** Stores large amounts of energy efficiently.
- **System Stability:** Enhances electricity system stability with flexible demand response.
- **Zero emissions:** emission free electricity that replaces fossil generation.
- **Renewable Support:** Supports other renewables like wind and solar.
- **Limited exposure of Climate Risk:** Less affected by climate changes.
- **Efficient Water Use:** Maximizes water resource utilization.
- **Minimal Environmental Impact:** when is developed based in already existing facilities.

Different forms of Energy storage

Pumping

4.2 GW. Evaluation and development of opportunities in existing sites

Lithium Batteries

24 projects in operation and big pipeline in different geographies

New long-duration technologies

Analysis of technologies and project evaluation (flow batteries, LAES, CAES...)

Driving the development of smart grids through digitalization

Digitalized Assets

~17M Smart meters installed in 2024

Electricity Supplied via Smart Grids: Spain: ~100%, USA: 71.8%, UK: 66.2%

Digitalization of Grids allows:

- **Integration of Renewables:** Enables new renewable energy sources to be incorporated into the electricity system.
- **Increased Demand Support:** Meets the growing demand from electric vehicles, heat pumps, and data centers.
- **Enhanced Resilience:** Improves system resilience, aiding in supply replenishment and mitigating physical impacts from climate change.

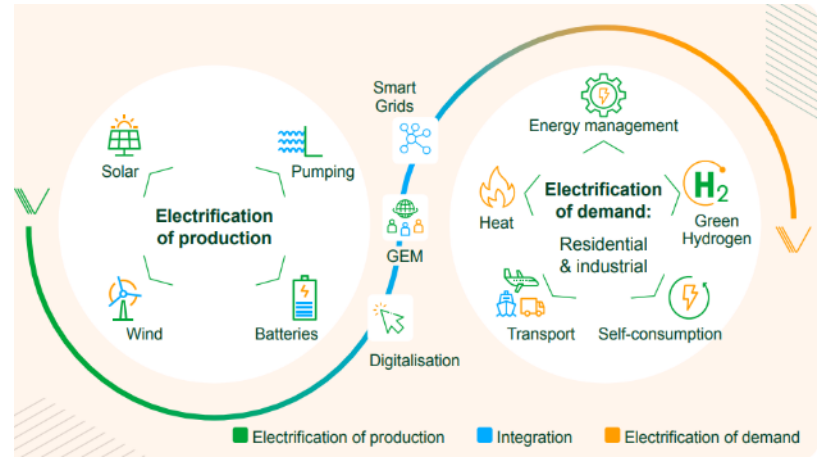

The group operates nearly **1.3 million kilometres** of electricity transmission and distribution lines

For the fourth year in a row, **1st private Utility Worldwide by R&D investment** according to the European Commission

Evolution of spending on R&D&I (M EUR)

% Investment in R&D by strategic areas

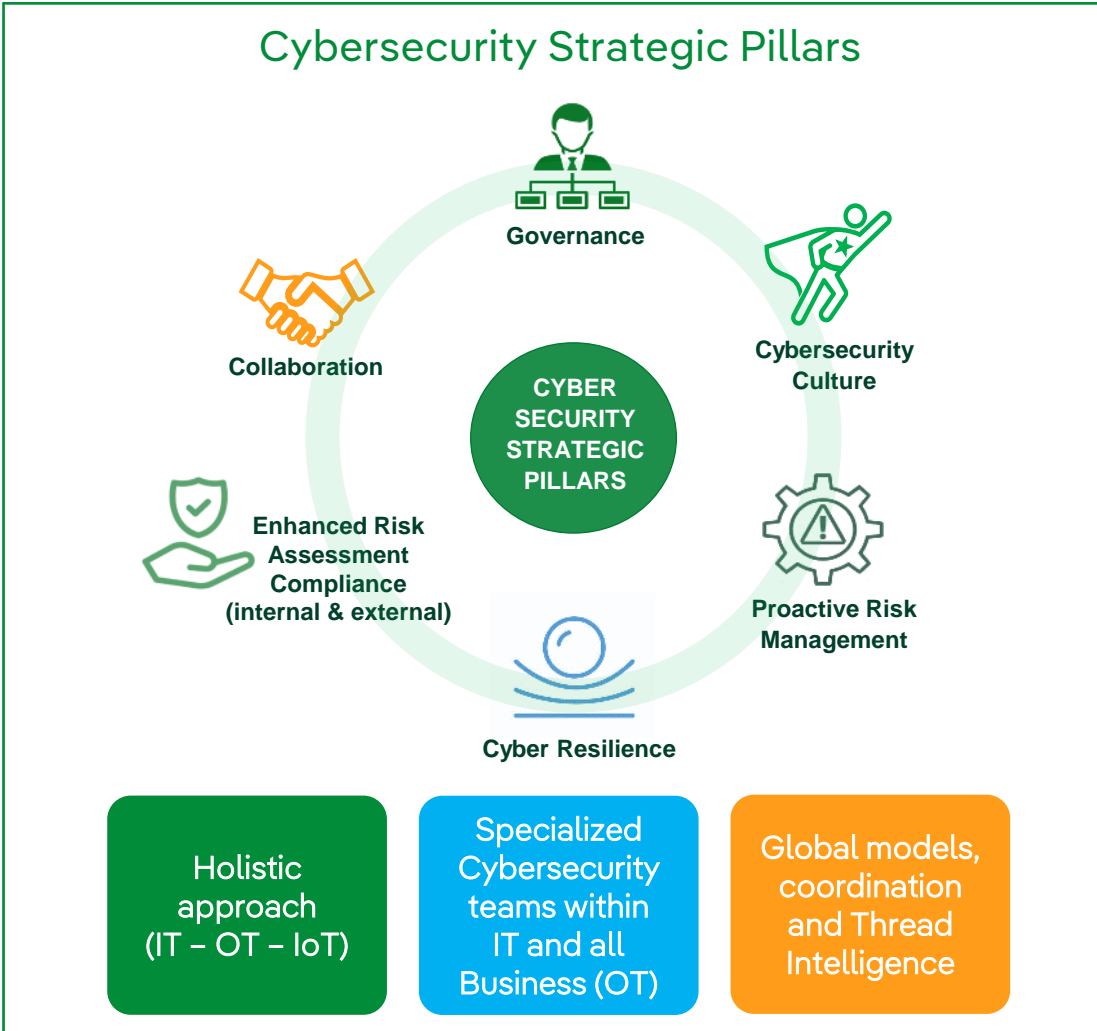

More than 250 innovation projects implemented annually

Venture Capital & New Business investments through Perseo Programme

New Investments materialized

New business launched

Enabling secure operations, innovation, and digitization in an increasingly complex ecosystem by **embedding Cybersecurity within Business decisions**

- ### Cybersecurity and information privacy objectives:
- Protecting our critical infrastructure
 - Ensuring energy supply reliability and quality
 - Protecting the data of our customers and other stakeholders
 - Guaranteeing the integrity and confidentiality of financial and business information
 - Protecting the brand and reputation of the Iberdrola Group

Capex Aligned with the European Taxonomy

The **CapEx of the aligned activities with respect to the total of eligible activities represents 99%**.
The company believes CapEx alignment is the best indicator of the group's sustainability.

2024 Eligible CapEx

Alignment on Eligible

~90% organic CAPEX to be EU taxonomy Aligned

| 2024 | Eligible | Aligned | Aligned over Eligible |
|-----------------|----------|---------|-----------------------|
| CAPEX | 89.9% | 89% | 99% |
| OPEX | 92.9% | 87.8% | 94.6% |
| REVENUES | 61.5% | 55.8% | 90.8% |

Thanks to the growth strategy based on smart grids and electricity generation from renewable sources, activities on which it focuses almost all of the investment

Triple Objective

Align financial strategy with the purpose, values, and investment strategy.

Optimize financial cost.

Diversify financing sources by leveraging sustainability as both an end and a means for achieving financial strength.

Sustainable financing of the Group in 2024

In 2024, 94% of new financing has been sustainable

Physical

Scope

All business and geographies (excluded underground infrastructures)

Granularity

Analysis done for each location

Assessment

semiquantitative analysis by the combination of sensitivity, exposure and adaptation capacity

One Material risk affecting Networks Assets

For long term (around 2050 time horizon)

Under the scenarios of higher emissions

Mainly in USA assets

Additional resilience factors:

- Gradual renewal of the assets
- Diversification
- Consideration of climate change in new investment decisions
- Regulatory coverage

Transition

Mitigating actions allows to conclude that **No Material Risks on the Transition analysis**

Opportunities identified

Decarbonizing electricity generation

Deploying heat pumps

Marketing new electricity solutions

Developing Green Hydrogen

Digitalizing Transmission and Distribution Networks

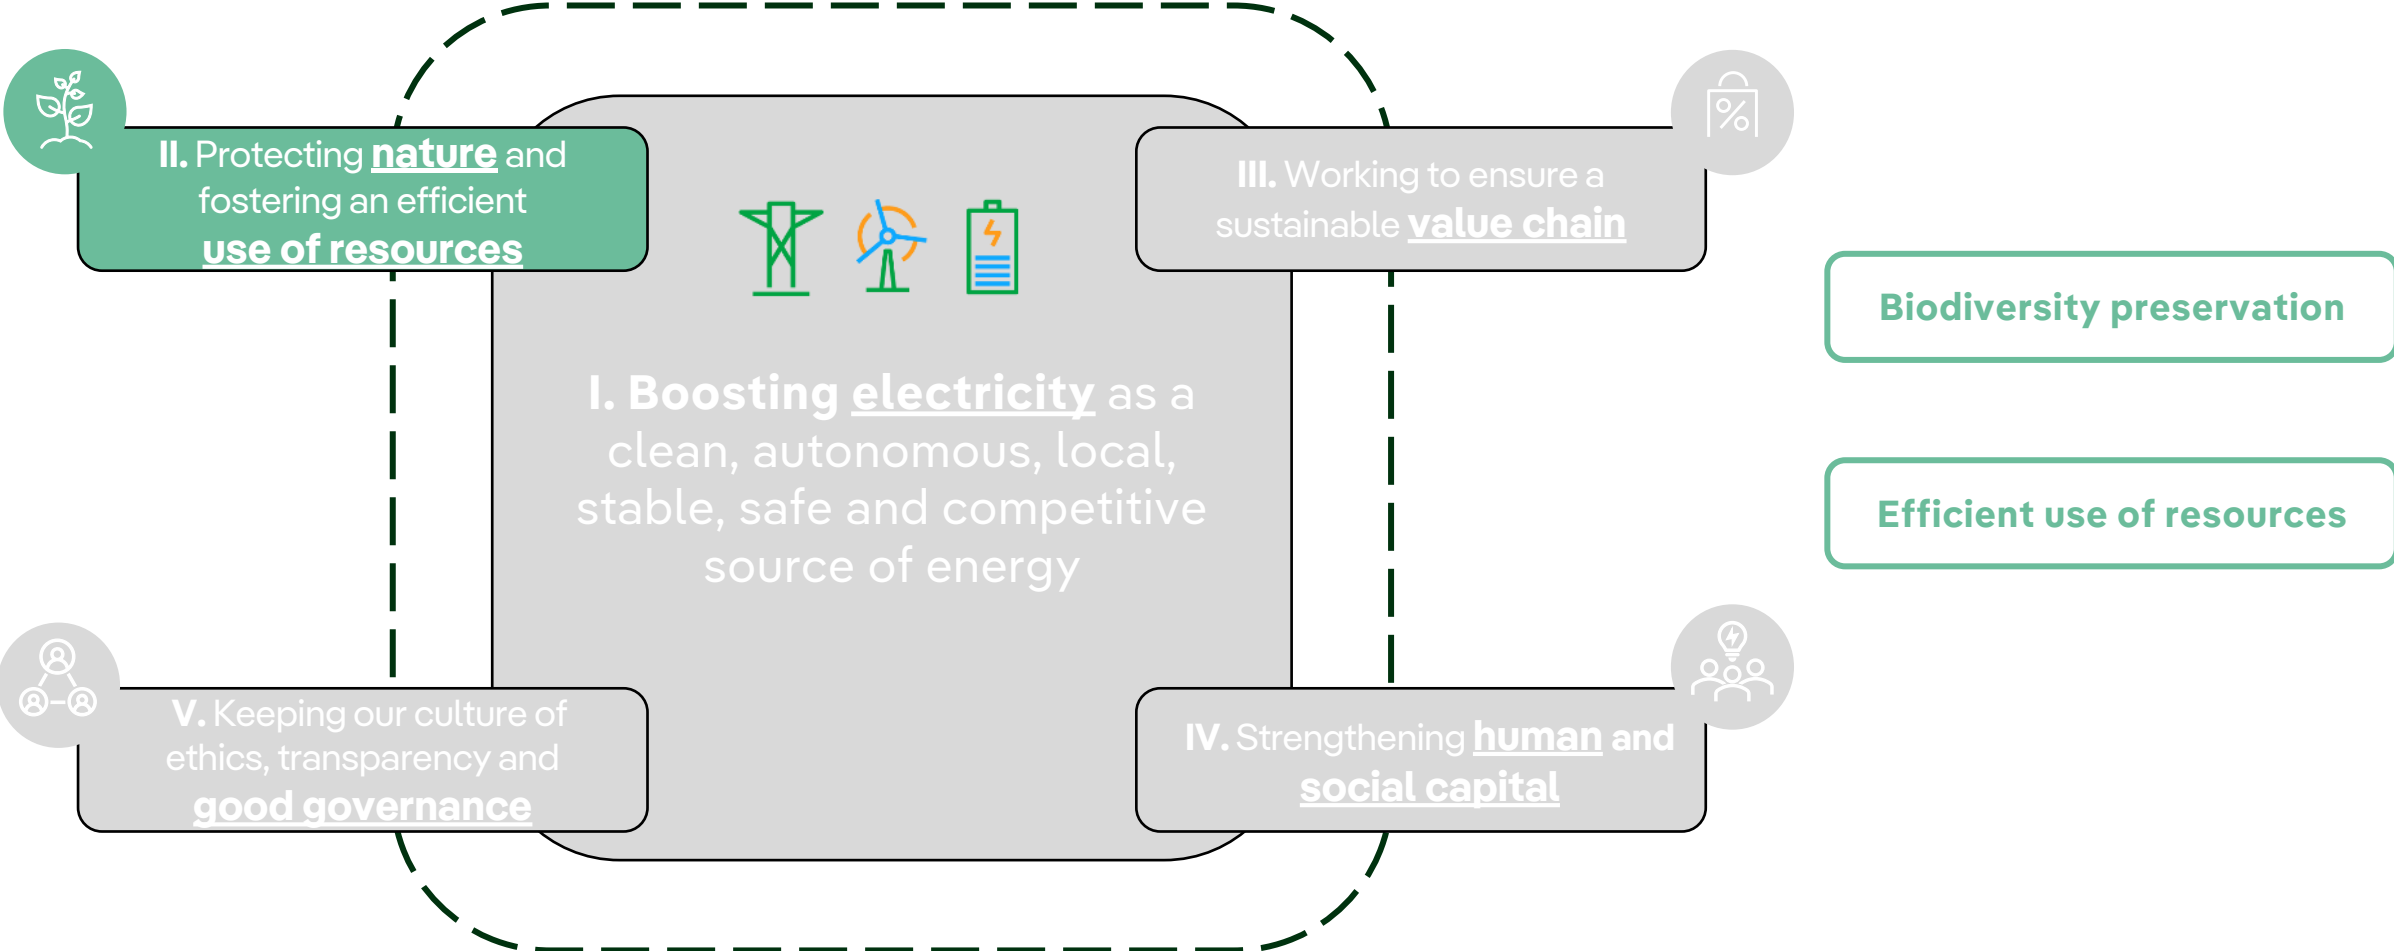

Increasing battery storage

Increasing hydro pumped storage

Expansion of EV charging

Presence in Voluntary carbon Markets

Our roadmap in sustainability: Pillar II

Biodiversity governance and sustainability system

Iberdrola S.A. have defined a Governance and Sustainability System to approve and update policies, which contain the guidelines governing the conduct of the Company on promoting nature and biodiversity integration into Iberdrola's decision-making processes.

[Click to read](#)

Policy on Management and Protection of Nature

Framework of reference for integrating the protection of nature and the environment within the Company's strategy, investments and operations.

Approved by Board of Directors

[Click to read](#)

Biodiversity Policy

Framework for articulating the Company's strategy and business model commitment to protect and foster biodiversity such that it contributes to a nature-positive community.

[Click to read](#)

2030 Biodiversity Plan

Mechanisms so that Iberdrola achieve a net positive impact on biodiversity and contributes to promoting cultural change to "Live in harmony with Nature".

Biodiversity metrics

Tools for measure the negative and positive impacts, produced by Iberdrola assets activities, on ecosystems and species.

Biodiversity Accountability framework

Operational framework that implements a physical accounting model to validate and monitor net positive impact on species and ecosystems.

"Include nature and biodiversity in decision-making processes through data governance, guaranteeing the economic flows of the business and generating additional economic returns to the company's investments"

Biodiversity Report 2024

Iberdrola S.A biodiversity report (click to read)

Our model: Renewables & Networks

High interaction with the territory and its biodiversity due to its location in the natural environment

2030 Biodiversity plan

2030 OBJECTIVE: Net positive impact on biodiversity

2025: *New facilities, and at least 20% generation facilities in operation with material impacts on biodiversity will have biodiversity action plan*

2030: *100% Generation facilities and networks with a biodiversity action plan*

Lines of action

Measure

We improve measurement standards

Establishing a new net balance accounting framework for biodiversity

Act

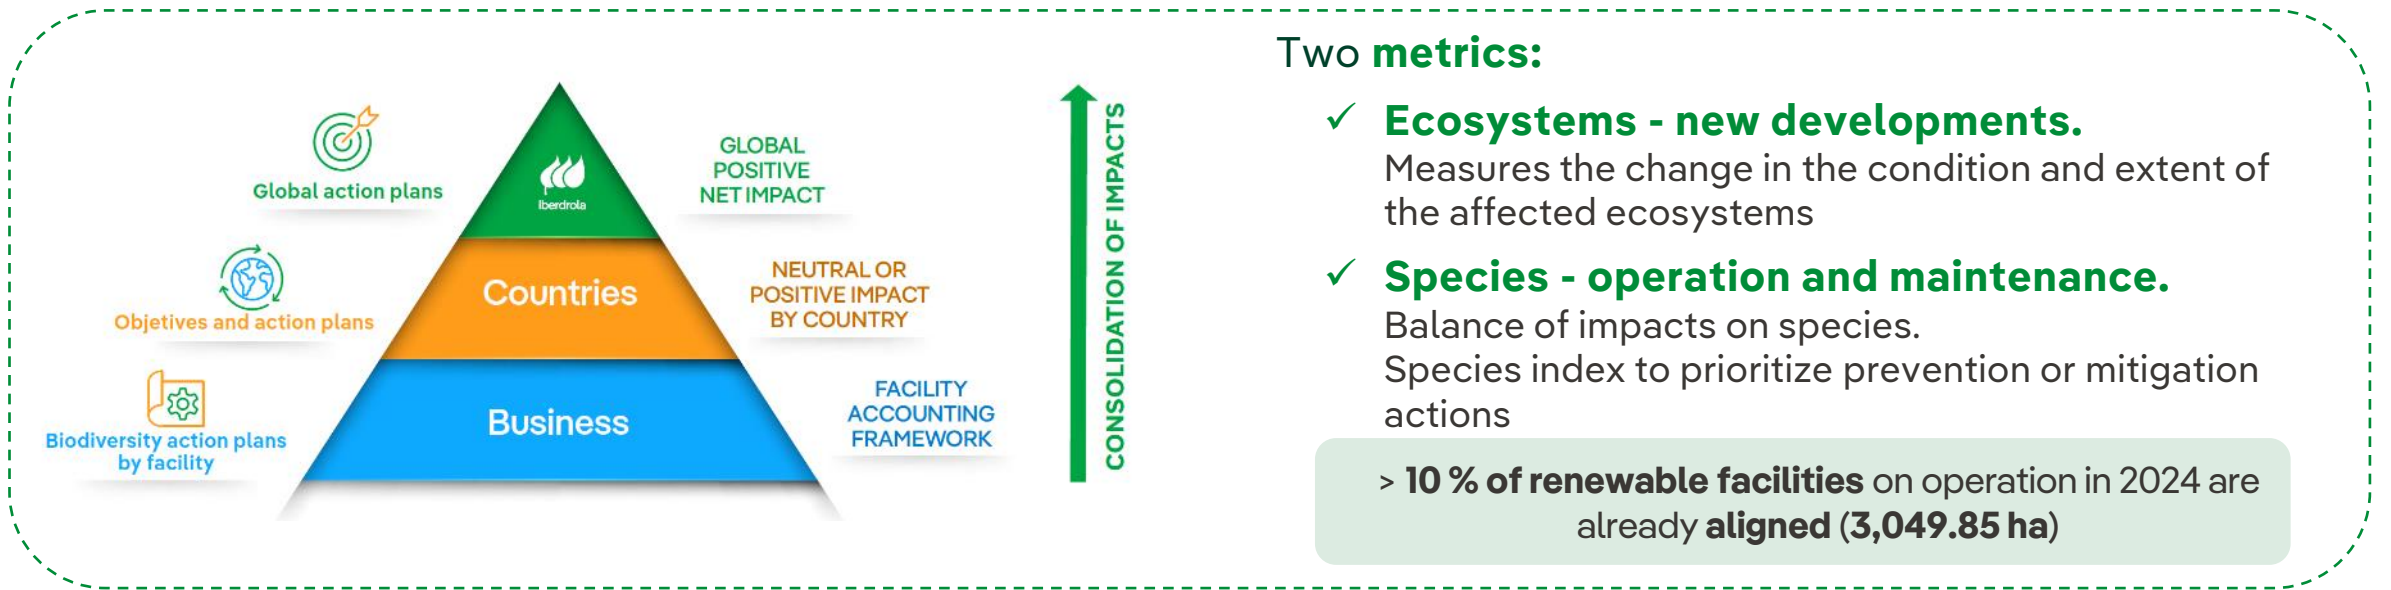

We reinforce our actions

Having a positive impact by applying the mitigation and conservation hierarchy in all phases

Transform & Lead

Driving action for biodiversity

Contributing through innovation and the transmission of knowledge to the cultural change

Two metrics:

- ✓ **Ecosystems - new developments.**
Measures the change in the condition and extent of the affected ecosystems
- ✓ **Species - operation and maintenance.**
Balance of impacts on species.
Species index to prioritize prevention or mitigation actions

> **10 % of renewable facilities** on operation in 2024 are already **aligned (3,049.85 ha)**

2024 actions

Radar systems and other bird prevention actions

Protection of submarine cables with concrete blocks with ecological design

Leading the implementation of TNFD recommendations

- One of the initial **energy company included** in TNFD and WBCSD **case studies**
- Risks and opportunities published in Non-financial information report
- **“TNFD Early adopters 2024”**: Iberdrola will publish its TNFD Report in 2025 (one of the primary utilities in the world)

100% owned by Iberdrola to reduce the global carbon footprint through the development of nature-based solutions, with a high impact on biodiversity and local communities

>60 MtCO₂
caught or fixed in the nature over the long term

Diversity of high-quality projects:

FORESTRY (80%)
Restoration, management and conservation of forest ecosystems

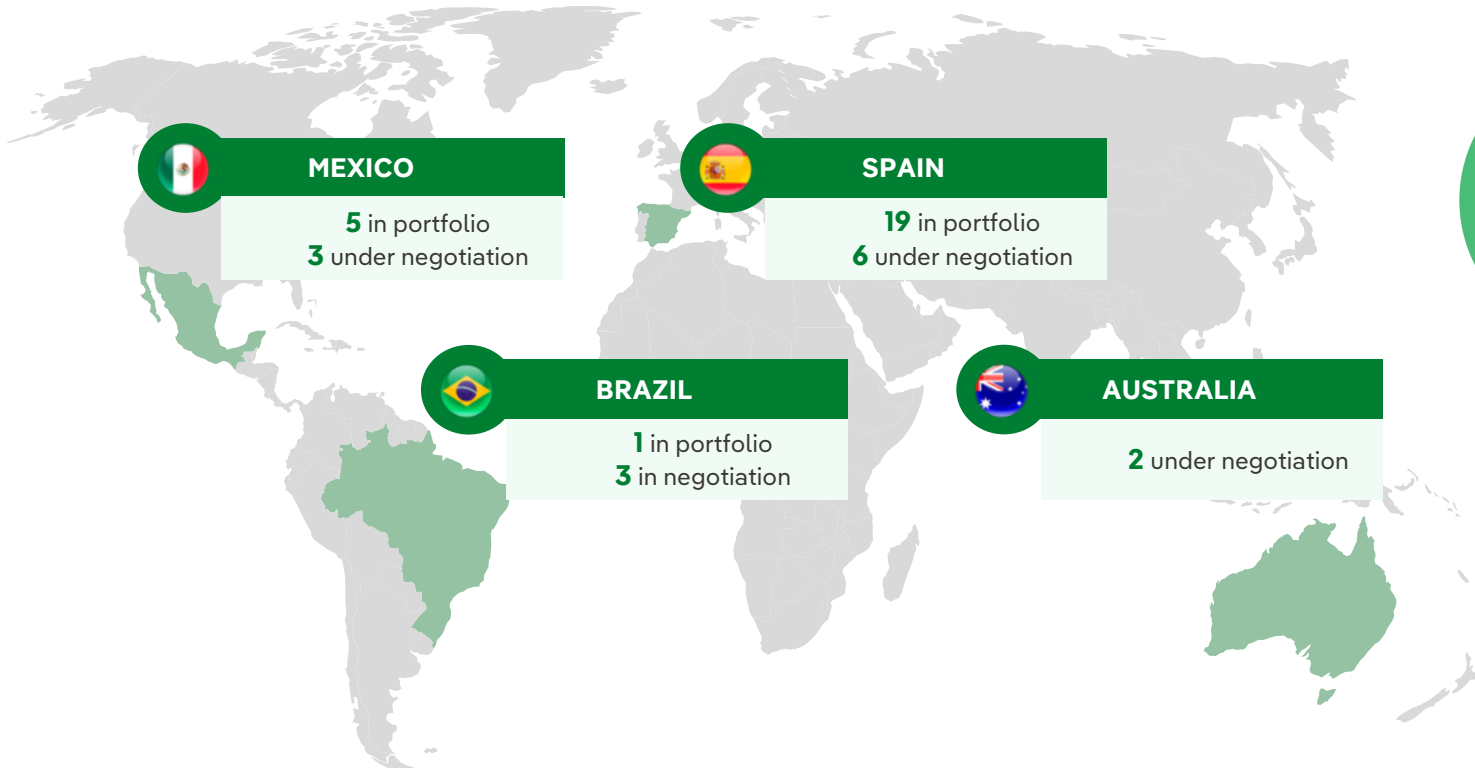

BLUE CARBON (15%)
Conservation and restoration of coastal and marine ecosystems

AGRICULTURE AND INNOVATION (5%)
Soil capture, methane reduction and other innovative techniques

Global presence: +40 Projects ongoing or study across Iberdrola's key countries

25 projects in portfolio

Carbon credits generated are certified by International Standards & Verifiers

Circular Economy Plan: Value Chain

The circular economy involves a cultural change in the way we understand the production and consumption to reduce resources needs and environmental impacts while creating value and employment.

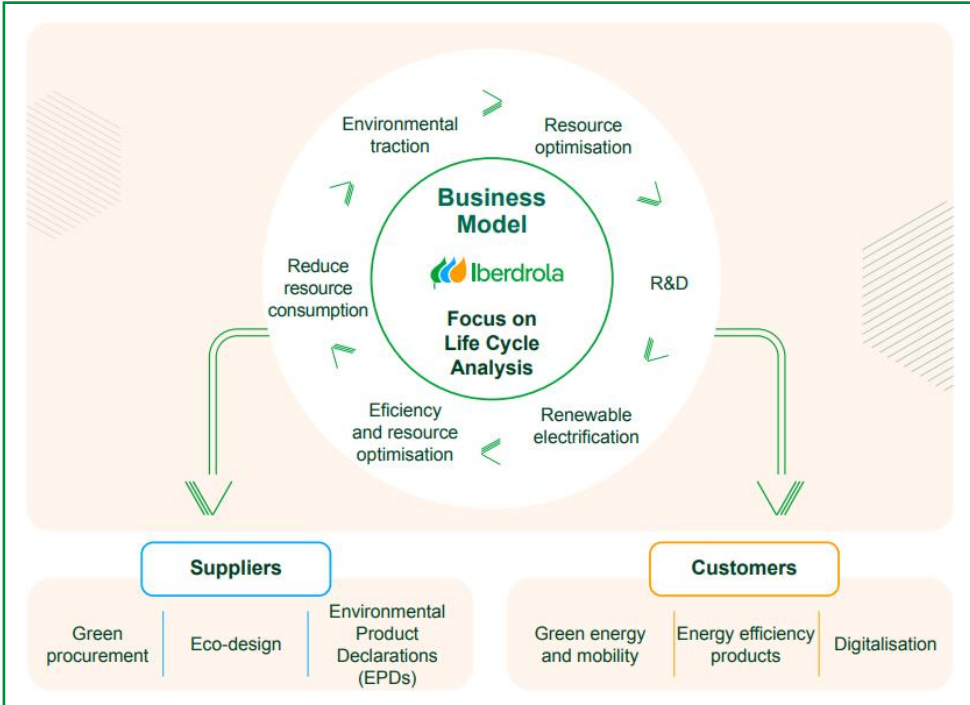

Three pillars

Use of **renewable resources** for energy production across the value chain

Improved **efficiency** in processes and services

Minimisation of waste and foster recycling

Our circular economy model

ENERGYLOOP

VISION: to become the leader in the recycling of wind turbine blades in Spain and Portugal

- **Target:** to have an operational facility available **when massive wind decommissioning activity begins.**
- Creating **alliances** with stakeholders in the wind sector to take advantage of **repowering opportunities**
- **Alliance with FCC Ambito**, a key player in industrial waste management

Actual figure 2024:
98.4% of blades or panels recycled

MISSION: To provide high-value secondary raw materials that enable value creation

Progress

**Mt of CO₂
emissions avoided**

| | |
|------------------------|------------------------|
| 26.67 (2023) | 23.13 (2024) |
|------------------------|------------------------|

Initiatives to reduce emissions are undertaken through a broad range of products and services promoting energy efficiency and savings:

- Production of renewable energy
- Savings through cogeneration
- Improving networks efficiency
- Offering green products and services to our customers

CO₂ avoided emissions have been calculated under the most rigorous methodology, as the product of the production attributable to each operation and the emission factor corresponding to the country where the assets are geographically located (not just the most polluting technology).

**Million GJ/year avoided of
equivalent consumption of
non-renewable primary energy**

| | |
|-------------------------|------------------------|
| 280.08 (2023) | 309.5 (2024) |
|-------------------------|------------------------|

**Million GJ/year of energy savings from
green products and services**

| | |
|-------------------------|------------------------|
| 273.31 (2023) | 287.6 (2024) |
|-------------------------|------------------------|

Efficient use of resources: specific water consumption

Iberdrola works to make rational use and efficient management of water resources

Search for efficiency

Control of consumption

Promote reuse

Avoid pollution

95% of water collected in thermal generation purposes is **returned to the environment**

65% of the water withdrawn is seawater or saltwater that **does not affect water stress**

7,357 hm³ amount of water recycled/reused **vs 62 hm³ of water used**

Water consumption /
total production
(m³/GWh)

2,100+ responses
received

2030 TARGET
≥ 85%

Purchases from **sustainable suppliers**

We evaluate the sustainability criteria of our suppliers:

Challenges achieved in 2024

More than 85% of main suppliers subject to sustainable development policies and standards. ✓

Social and sustainability audits performed to Tier-1 main suppliers. ✓

Follow up audit for the ISO 20400 Sustainable Procurement Strategy certificate. ✓

Celebration of the 2024 Supplier of the Year Awards in each one of the subholdings. ✓

Advance in the traceability of the supply chain. ✓

Supplier Satisfaction Survey IX edition performed. ✓

New challenges (short and medium term)

1

More than 85% of purchases made from main suppliers subject to sustainable development policies and standards.

2

Incorporate tools into the purchasing process to manage the risks associated with the supply chains of our direct suppliers.

3

Strengthen the supply chain Due Diligence system in order to mitigate sustainability risks.

4

Improve the carbon footprint information collection of our suppliers and their decarbonization commitments.

5

Implement new, unified, digital and more efficient global third-party relationship model, providing integration across all Group areas.

We celebrate our suppliers' excellence with the 2024 Supplier of the Year Awards, recognizing 42 companies for their innovation, job creation, health and safety, equal opportunities, quality, and sustainability

In supporting the energy transition and the green economy, **Iberdrola supports an orderly, just and inclusive transition**, promoting economic and industrial development, as well as clean, autonomous, local, stable, safe and competitive energy.

Specific targets for main stakeholders:

Employees

Green-skilling
Program Deployment

Customers

Distribution by professional category and gender

Equality and Inclusion (E&I) Strategy

At Iberdrola, we embed equal opportunity and inclusion into our value chain through cross-cutting initiatives aimed at our workforce and other stakeholders to drive economic growth, social development and generate a more innovative and sustainable energy future for all

Promotion of an inclusive **culture** through training of team leaders, collective awareness-raising and positive communication.

Contribution to bring about **real change** towards a more sustainable future and a fairer society.

Inclusive **talent management** to promote equal access to opportunities and enhance the development and growth of all people in the company.

Inclusive **services** are offered and energy access for vulnerable customers is promoted.

Employee Upskilling: Green Skilling (Green + re-skilling) Pioneers

We consider reskilling to be the process by which our people can acquire new skills that increase their contribution of value to the organisation or provide them with professional repositioning within the energy transition process (“green skills”)

>3M
hours of training provided

>2M hours devoted to green skilling training to keep our staff always up to date

Community Development: foundations of the Iberdrola Group

During the 2024 FY, our foundations allocated approximately 14 M EUR to support programmes for the communities in which the company operates

| | |
|--|---|
| | + 6.5 M EUR +3,900,000 Beneficiaries |
| | +3.2 M EUR +1,234,000 Beneficiaries |
| | +1.9 M EUR +40,000 Beneficiaries |
| | +1.2 M EUR +189,000 Beneficiaries |
| | +0.9 M EUR +649,000 Beneficiaries |

Community Development: Contribution to the community

Iberdrola has selected the Business for Societal Impact B4SI model to measure and assess business contributions to the community. This standard only recognises projects that involve voluntary contributions for social or environmental protection ends, for non-profit purposes, and that are not restricted to groups related to the company.

In 2024, the contribution amounts to 56.7 M EUR
Equivalent to 1.1% of 2024 net profits

Community Development: Fiscal Contribution - Taxes / Group

Tax contribution of **10,300 M EUR** in 2024, an increase of **8%** over the previous financial year

Own taxes charged to the income statement of **5,279 M EUR**, representing **48%** of profit before tax.

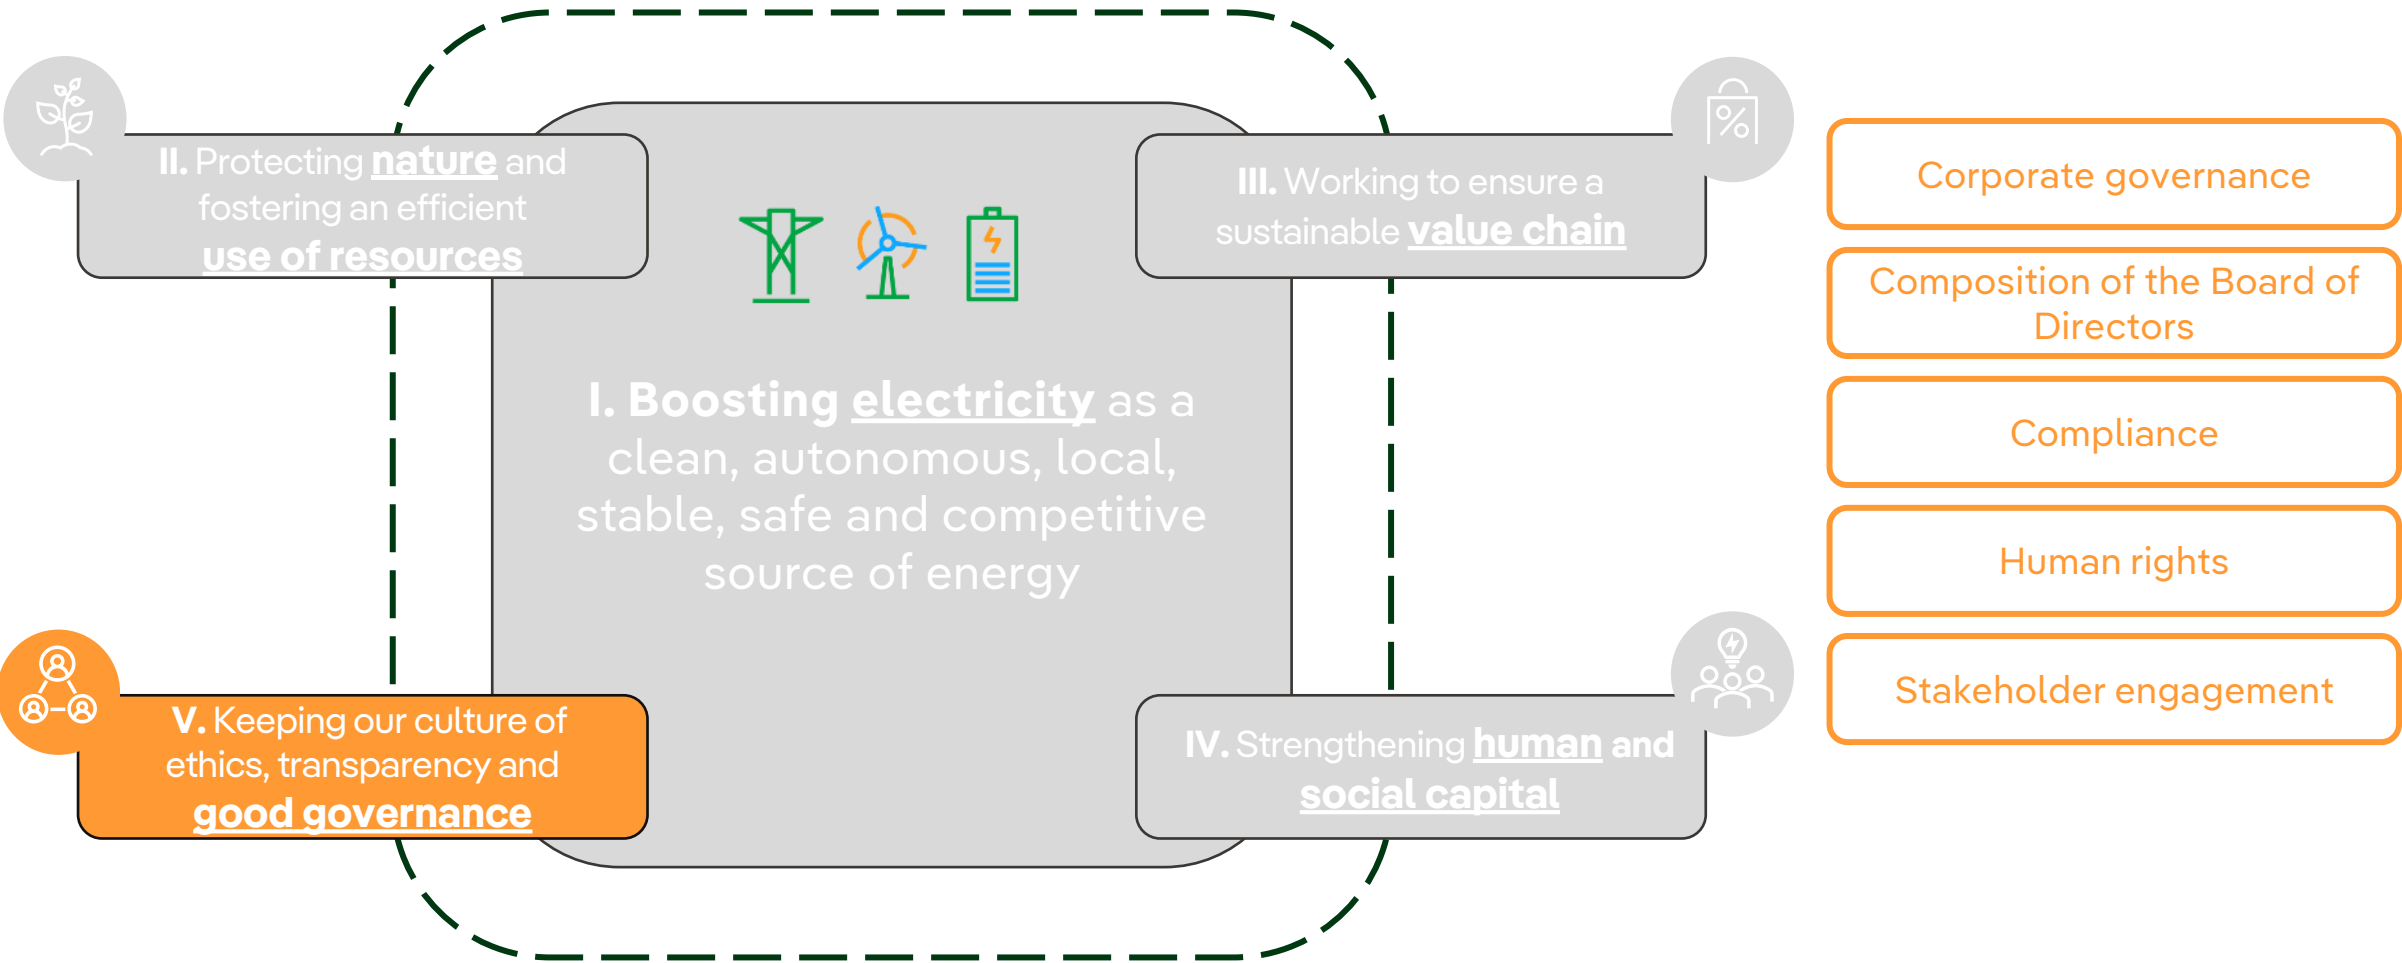

43,000 M EUR in taxes paid over the **past five years**

Taxes paid are twice as high as the Group's net profit

Iberdrola's tax contribution by countries

| | Taxes paid to public treasury (M EUR) | Company contributions | Contributions due to third-party payments | Total |
|---|---------------------------------------|-----------------------|---|---------------|
|  Spain | | 2,532 | 1,781 | 4,313 |
|  United Kingdom | | 984 | 276 | 1,260 |
|  United States | | 891 | 401 | 1,292 |
|  Brazil | | 219 | 2,209 | 2,428 |
|  Mexico | | 452 | -10 | 442 |
|  Other countries | | 201 | 364 | 565 |
| Total | | 5,279 | 5,021 | 10,300 |

Our roadmap in sustainability: Pillar V

Driving Ideas of the Governance and Sustainability System

Leadership in sustainability, corporate governance and transparency and an ethics-based culture are hallmarks of the identity of IBERDROLA, S.A.

Sustainable creation of long-term value and efficiency

Permanent engagement of and active listening to Stakeholders

Decentralised structure

Human and social capital

Electrification of the energy model

Compliance and comprehensive risk management

Company's Board of Directors therefore regularly reviews the Governance and Sustainability System, keeping it updated and including therein the good governance recommendations and best practices

Governance and Sustainability System

Human Rights: A Human Rights Due Diligence System

In **2015**, the Board of Directors **approved the Human Rights Policy** which is mandatory for all companies and professionals in the group that foresees a set of tools, aligned with the main international standards, to **prevent, mitigate and repair any negative impacts**

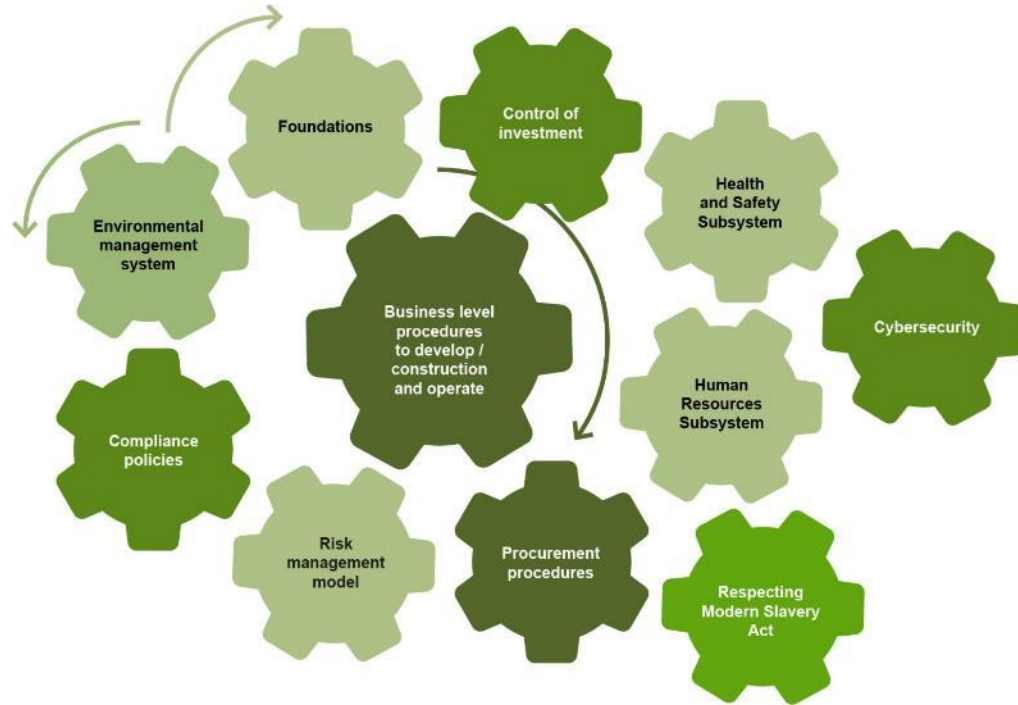

| | | |
|--------------------------|--|--|
| Iberdrola commitments | To respect the human and labor rights even in countries in which the legislation on human rights has not been adequately developed. | To reject child labor exploitation, forced labor or any other form of modern slavery, and respect freedom of association and collective bargaining, as well as nondiscrimination, the right to move freely within each country and ethnic minorities and Indigenous Peoples rights. |
| | To respect the right to a clean, healthy and sustainable environment of all the communities in which it operates. | To understand access to energy as a right related to other human rights , working with public institutions in the implementation of protection systems for vulnerable customers . |

Iberdrola Group's Human Rights Regulatory Framework secured through

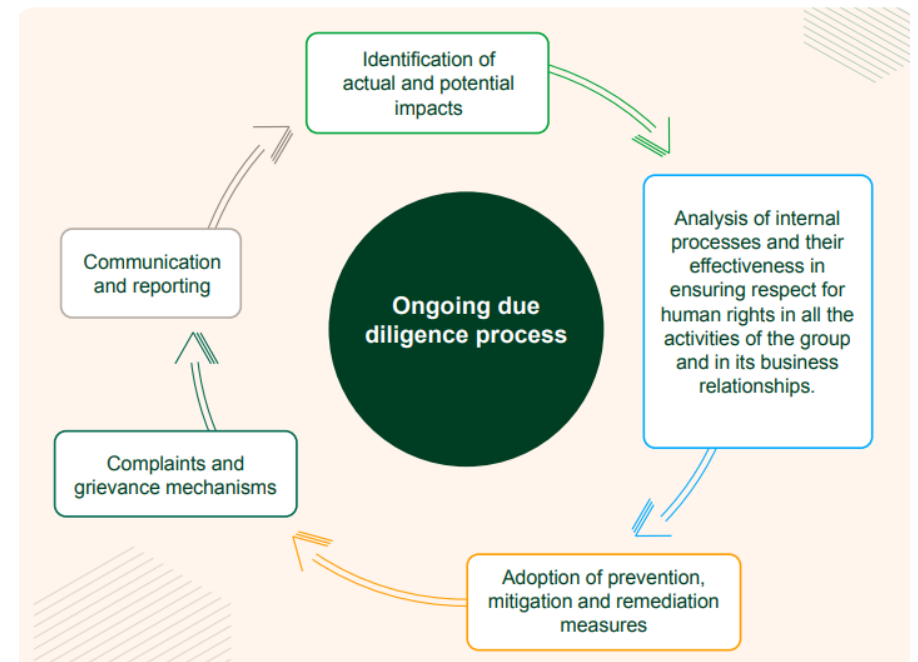

Human Rights: A Human Rights Due Diligence System

As a result of the adoption of a **broad definition of human rights**, the due diligence system is based on **various subsystems and procedures**

Some of these subsystems operate **according to external recognized** frameworks such as: ISO 14001 (Environment), ISO 45001 (Health and Safety), ISO 20400 (Procurement), ISO 37001 and ISO 19601 (Compliance),...

In accordance with UNGP 15 and UNGP 17, Iberdrola understands **the Human Rights Due Diligence System** as a **continuous process** applicable to all phases (planning, construction, operation, maintenance and closure of facilities) taking into account the geographical framework and the characteristics of the supply chain

Stakeholder engagement model

Iberdrola develops a responsible, sustainable and resilient business model, that puts stakeholders at the heart of its decisions

Iberdrola considers six priority stakeholders:

| Interactions | | |
|--------------------------|--------------------|------------------------|
| 75 Subgroups of interest | 3,489 Entities | 1,307 Channels |
| 1,907 Relevant Matters | 981 Risks | 605 Reputational risks |
| 1,109 Opportunities | 2,665 Action plans | 154 Good practices |

In 2024, 80.1% of our installations already have the Stakeholder engagement model implemented

In line with its strategy, Iberdrola promotes and supports the approval of objectives and frameworks for climate policies in line with the Paris Agreement (1.5°C) from an ambitious perspective that creates value for society as a whole.

Indirect lobby Participation in national and international associations

Alignment with Paris Agreement (1.5 scenario), the promotion of energy transition and the defence of Human rights.

Consistency with the Corporate Purpose and Values.

Annual analysis of the degree of alignment of organizations Iberdrola participates, with the company's Statement of commitment to sustainable development, decarbonization, respect for and defence of Human Rights and the fight against climate change.

The Group has developed a **specific framework for managing possible episodes of misalignment.**

Direct lobby Engagement with public bodies

Legitimate defense of Iberdrola and its stakeholders' interests.

Participation in **public consultation processes** stating its global climate positions advocating and promoting the decarbonization and the energy transition in line with Paris Agreement (1.5°).

Maintaining regular **contacts with public bodies advocating and promoting decarbonization.**

Full transparency regarding financial contributions to political parties: Iberdrola is a politically neutral company.

Number of organisations

According to the economic contribution made by the companies of the Iberdrola Group in 2023 (€)

National and international partnerships

Alignment with Iberdrola's Statement of commitment to sustainable development, respect for and defence of Human Rights and the fight against climate change.

DISCLAIMER

This document has been prepared by Iberdrola, S.A. and contains information relating to Iberdrola, S.A. and the group of companies of which Iberdrola, S.A. is the controlling entity, within the meaning established by law and it is issued solely for its incorporation in Factbook 2025 data base for information purposes.

By reading this document you acknowledge and accept the content of this notice.

This document does not constitute an offer, recommendation or advice, or an invitation to purchase, sale, hold or exchange, nor a request for an offer of purchase, sale, hold or exchange of shares or securities, nor to execute any transaction whatsoever. It should not be treated as giving investment advice, nor is it intended to provide the basis for any valuation of securities.

It is strictly forbidden to publish, disclose, use or reproduce by any means the information herein, either partially or completely, without the express and prior written consent of Iberdrola, S.A.

The information and any opinions or statements made in this document have not been verified by independent third parties; therefore, no express or implied representation or warranty is made as to the impartiality, accuracy, completeness or correctness of the information or the opinions or statements expressed herein, and no reliance should be placed on for any purpose whatsoever. Likewise, some of the information presented herein is based on statements by third parties.

Iberdrola, S.A. undertakes no obligation to publicly update or revise any information on this document or to provide the recipient with access to any additional information or to update this documentation or any information or to correct any inaccuracies in any such information.

Neither Iberdrola, S.A. nor any companies of the Iberdrola Group assume liability of any kind, whether for negligence or any other reason, for any loss or damage whatsoever and howsoever arising as a result of your use of or reliance on the information contained in this document.

Neither this document nor any part of it constitutes a contract, nor may it be used for incorporation into or construction of any contract, agreement or any other type of commitment.

Certain numerical data relating the profits of Iberdrola, S.A. in this document have been rounded according to established commercial standards. As a result, the aggregate amounts (sum totals or interim totals or differences or if numbers are put in relation) in this document may not correspond in all cases to the amounts contained in the underlying (unrounded) figures appearing in the consolidated financial statements.

IMPORTANT INFORMATION

This document does not constitute an offer or invitation to purchase or subscribe shares, in accordance with the provisions of Regulation (EU) 2017/1129 of the European Parliament and of the Council, of 14 June 2017, on the prospectus to be published when securities are offered to the public or admitted to trading on a regulated market, and repealing Directive 2003/71/EC and its implementing regulations.

In addition, this document does not constitute an offer of purchase, sale or exchange, nor a request for an offer of purchase, sale or exchange of securities, nor a request for any vote or approval in any other jurisdiction.

The shares of Iberdrola, S.A. may not be offered or sold in the United States of America except pursuant to an effective registration statement under the Securities Act of 1933 or pursuant to a valid exemption from registration.

The shares of Iberdrola, S.A. may not be offered or sold in Brazil except under the registration of Iberdrola, S.A. as a foreign issuer of listed securities, and a registration of a public offering of depositary receipts of its shares, pursuant to the Capital Markets Act of 1976 (Federal Law No. 6,385 of December 7, 1976, as further amended), or pursuant to a valid exemption from registration of the offering.

This document does not contain, and the information presented herein does not constitute, an earnings release or statement of earnings of Neoenergia S.A. (“Neoenergia”) or Neoenergia's financial results. Neither Neoenergia nor its subsidiaries assume responsibility for the information presented herein.

FORWARD-LOOKING STATEMENTS

This document contains forward-looking information and statements about Iberdrola, S.A., including financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future operations, capital expenditures, synergies, products and services, and statements regarding future performance. Forward-looking statements are statements that are not historical facts and are generally identified by the words “expects,” “anticipates,” “believes,” “intends,” “estimates” and similar expressions.

Although Iberdrola, S.A. believes that the expectations reflected in such forward-looking statements are reasonable, investors and holders of Iberdrola, S.A. shares are cautioned that forward-looking information and statements are subject to various risks and uncertainties, many of which are difficult to predict and generally beyond the control of Iberdrola, S.A., that could cause actual results and developments to differ materially from those expressed in, or implied or projected by, the forward-looking information and statements. These risks and uncertainties include those discussed or identified in the documents sent by Iberdrola, S.A. to the Spanish Comisión Nacional del Mercado de Valores, which are accessible to the public.

Forward-looking statements are not guarantees of future performance. They have not been reviewed by the auditors of Iberdrola, S.A. You are cautioned not to place undue reliance on the forward-looking statements, which speak only as of the date they were made. All subsequent oral or written forward-looking statements attributable to Iberdrola, S.A. or any of its members, directors, officers, employees or any persons acting on its behalf are expressly qualified in their entirety by the cautionary statement above. All forward-looking statements included herein are based on information available to Iberdrola, S.A. on the date hereof. Except as required by applicable law, Iberdrola, S.A. does not undertake any obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise.

ALTERNATIVE PERFORMANCE MEASURES

This document includes certain alternative performance measures (“APMs”) for the purposes of Commission Delegated Regulation (EU) 2019/979, of March 14, 2019 and as defined in the Guidelines on Alternative Performance Measures issued by the European Securities and Markets Authority on 5 October 2015 (ESMA/2015/1415es). The APMs are performance measures that have been calculated using the financial information from Iberdrola, S.A. and the companies within its group, but that are not defined or detailed in the applicable financial information framework. These APMs are being used to allow for a better understanding of the financial performance of Iberdrola, S.A. but should be considered only as additional information and in no case as a substitute of the financial information prepared under International Financial Reporting Standards (“IFRS”). Moreover, the way Iberdrola, S.A. defines and calculates these APMs may differ from the way these are calculated by other companies that use similar measures, and therefore they may not be comparable. Finally, please consider that certain of the APMs used in this document have not been audited. Please refer to this document and to the corporate website (www.iberdrola.com) for further details of these matters, including their definition or a reconciliation between any applicable management indicators.

Sustainability

Iberdrola, S.A. commits to carrying out its best efforts to achieve its ambition of carbon neutrality for its Scope 1 and 2 in 2030. For these purposes, it will align its strategy, investments, operations and public positioning with this ambition. Additionally, Iberdrola, S.A. is also committed to undertake the energy transition in a way that creates value for its shareholders, employees, clients, suppliers and the communities where it operates. Accordingly, Iberdrola, S.A. reserves the capacity to adapt its planning to successfully face its performance in key material aspects such as the value of Iberdrola, S.A., the quality of supply or the social, labor, and fair transition conditions. The abovementioned commitments are of aspirational nature.
