

Sustainability Disclosures

Principle Adverse Impact Statement (PAI)

Article 4 of the SFDR Regulation (EU) 2019/2088

Version June 2025

ANNEX I

Template principal adverse sustainability impacts statement

Table of content	Page
Definitions	3-5
Formulas	6-7
Summary	8-9
Table 1: Description of the principal adverse impacts on sustainability factors	10-22
Other indicators for principal adverse impacts on sustainability factors	23-24
Description of policies to identify and prioritise principal adverse impacts on sustainability factors	24-26
Engagement policies	26-27
References to international standards	27-28
Historical comparison	28-29
Table 2: Additional climate and other environment-related indicators	29-32
Table 3: Additional indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters	33-39
Appendix	40-42

Definitions

For the purposes of this Annex, the following definitions shall apply:

1. 'Scope 1, 2 and 3 GHG emissions' means the scope of greenhouse gas emissions referred to in points (1)(e)(i) to (iii) of Annex III to Regulation (EU) 2016/1011 of the European Parliament and of the Council¹;
2. 'Greenhouse gas (GHG) emissions' means greenhouse gas emissions as defined in Article 3, point (1), of Regulation (EU) 2018/842 of the European Parliament and of the Council²;
3. 'Weighted average' means a ratio of the weight of the investment by the financial market participant in an investee company in relation to the enterprise value of the investee company;
4. 'Enterprise value' means the sum, at fiscal year-end, of the market capitalisation of ordinary shares, the market capitalisation of preferred shares, and the book value of total debt and non-controlling interests, without the deduction of cash or cash equivalents;
5. 'Companies active in the fossil fuel sector' means companies that derive any revenues from exploration, mining, extraction, production, processing, storage, refining or distribution, including transportation, storage and trade, of fossil fuels as defined in Article 2, point (62), of Regulation (EU) 2018/1999 of the European Parliament and of the Council³;
6. 'Renewable energy sources' means renewable non-fossil sources, namely wind, solar (solar thermal and solar photovoltaic) and geothermal energy, ambient energy, tide, wave and other ocean energy, hydropower, biomass, landfill gas, sewage treatment plant gas, and biogas;
7. 'non-renewable energy sources' means energy sources other than those referred to in point (6);
8. 'Energy consumption intensity' means the ratio of energy consumption per unit of activity, output or any other metric of the investee company to the total energy consumption of that investee company;

¹ Regulation (EU) 2016/1011 of the European Parliament and of the Council of 8 June 2016 on indices used as benchmarks in financial instruments and financial contracts or to measure the performance of investment funds and amending Directives 2008/48/EC and 2014/17/EU and Regulation (EU) No 596/2014 (OJ L 171, 29.6.2016, p. 1).

² Regulation (EU) 2018/842 of the European Parliament and of the Council of 30 May 2018 on binding annual greenhouse gas emission reductions by Member States from 2021 to 2030 contributing to climate action to meet commitments under the Paris Agreement and amending Regulation (EU) No 525/2013 (OJ L 156, 19.6.2018, p. 26).

³ Regulation (EU) 2018/1999 of the European Parliament and of the Council of 11 December 2018 on the Governance of the Energy Union and Climate Action, amending Regulations (EC) No 663/2009 and (EC) No 715/2009 of the European Parliament and of the Council, Directives 94/22/EC, 98/70/EC, 2009/31/EC, 2009/73/EC, 2010/31/EU, 2012/27/EU and 2013/30/EU of the European Parliament and of the Council, Council Directives 2009/119/EC and (EU) 2015/652 and repealing Regulation (EU) No 525/2013 of the European Parliament and of the Council (OJ L 328, 21.12.2018, p. 1).

9. 'High impact climate sectors' means the sectors listed in Sections A to H and Section L of Annex I to Regulation (EC) No 1893/2006 of the European Parliament and of the Council⁴;
10. 'Protected area' means designated areas in the European Environment Agency's Common Database on Designated Areas (CDDA).
11. 'Area of high biodiversity value outside protected areas' means land with high biodiversity value as referred to in Article 7b (3) of Directive 98/70/EC of the European Parliament and of the Council⁵;
12. 'Emissions to water' means direct emissions of priority substances as defined in Article 2(30) of Directive 2000/60/EC of the European Parliament and of the Council⁶ and direct emissions of nitrates, phosphates and pesticides.
13. 'Areas of high water stress' means regions where the percentage of total water withdrawn is high (40-80%) or extremely high (greater than 80%) in the World Resources Institute's (WRI) Water Risk Atlas tool "Aqueduct".
14. 'Hazardous waste and radioactive waste' means hazardous waste and radioactive waste.
15. 'Hazardous waste' means hazardous waste as defined in Article 3(2) of Directive 2008/98/EC of the European Parliament and of the Council⁷.
16. 'Radioactive waste' means radioactive waste as defined in Article 3(7) of Council Directive 2011/70/Euratom⁸;
17. 'Non-recycled waste' means any waste not recycled within the meaning of 'recycling' in Article 3(17) of Directive 2008/98/EC.
18. 'Activities negatively affecting biodiversity-sensitive areas' means activities that are characterised by the following:
 - A. Those activities lead to the deterioration of natural habitats and the habitats of species and disturb the species for which a protected area has been designated.
 - B. For those activities, none of the conclusions, mitigation measures or impact assessments adopted pursuant to any of the following Directives or national provisions or international standards that are equivalent to those Directives have been implemented:
 - i. Directive 2009/147/EC of the European Parliament and of the Council⁹;
 - ii. Council Directive 92/43/EEC¹⁰;
 - iii. an Environmental Impact Assessment (EIA) as defined in Article 1(2), point (g), of Directive 2011/92/EU of the European Parliament and of the Council¹¹;
 - iv. for activities located in third countries, conclusions, mitigation measures or impact assessments adopted in accordance with national provisions or international standards that are equivalent to the Directives and impact assessments listed in points (i), (ii) and (iii).

⁴ Regulation (EC) No 1893/2006 of the European Parliament and of the Council of 20 December 2006 establishing the statistical classification of economic activities NACE Revision 2 and amending Council Regulation (EEC) No 3037/90 as well as certain EC Regulations on specific statistical domains Text with EEA relevance (OJ L 393, 30.12.2006, p. 1–39).

⁵ Directive 98/70/EC of the European Parliament and of the Council of 13 October 1998 relating to the quality of petrol and diesel fuels and amending Council Directive 93/12/EEC (OJ L 350, 28.12.1998, p. 58).

⁶ Directive 2000/60/EC of the European Parliament and of the Council of 23 October 2000 establishing a framework for Community action in the field of water policy (OJ L 327, 22.12.2000, p. 1).

⁷ Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste and repealing certain Directives (OJ L 312, 22.11.2008, p. 3).

⁸ Council Directive 2011/70/Euratom of 19 July 2011 establishing a Community framework for the responsible and safe management of spent fuel and radioactive waste (OJ L 199, 2.8.2011, p. 48).

⁹ Directive 2009/147/EC of the European Parliament and of the Council of 30 November 2009 on the conservation of wild birds (OJ L 20, 26.1.2010, p. 7).

¹⁰ Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora (OJ L 206, 22.7.1992, p. 7).

¹¹ Directive 2011/92/EU of the European Parliament and of the Council of 13 December 2011 on the assessment of the effects of certain public and private projects on the environment (OJ L 026, 28.1.2012, p. 1).

19. 'Biodiversity-sensitive areas' means Natura 2000 network of protected areas, UNESCO World Heritage sites and Key Biodiversity Areas ('KBAs'), as well as other protected areas, as referred to in Appendix D of Annex II to Commission Delegated Regulation (EU) 2021/2139¹²;
20. 'Threatened species' means endangered species, including flora and fauna, listed in the European Red List or the IUCN Red List, as referred to in Section 7 of Annex II to Delegated Regulation (EU) 2021/2139.
21. 'Deforestation' means the temporary or permanent human-induced conversion of forested land to non-forested land.
22. 'UN Global Compact principles' means the ten Principles of the United Nations Global Compact.
23. 'Unadjusted gender pay gap' means the difference between average gross hourly earnings of male paid employees and of female paid employees as a percentage of average gross hourly earnings of male paid employees.
24. 'Board' means the administrative, management or supervisory body of a company.
25. 'Human rights policy' means a policy commitment approved at board level on human rights that the economic activities of the investee company shall be in line with the UN Guiding Principles on Business and Human Rights.
26. 'Whistle blower' means 'reporting person' as defined in Article 5(7) of Directive (EU) 2019/1937 of the European Parliament and of the Council¹³;
27. 'Inorganic pollutants' means emissions within or lower than the emission levels associated with the best available techniques (BAT-AEL) as defined in Article 3, point (13) of Directive 2010/75/EU of the European Parliament and of the Council¹⁴, for the Large Volume Inorganic Chemicals- Solids and Others industry.
28. 'Air pollutants' means direct emissions of sulphur dioxides (SO₂), nitrogen oxides (NO_x), non-methane volatile organic compounds (NMVOC), and fine particulate matter (PM_{2,5}) as defined in Article 3, points (5) to (8), of Directive (EU) 2016/2284 of the European Parliament and of the Council¹⁵, ammonia (NH₃) as referred to in that Directive and heavy metals (HM) as referred to in Annex I to that Directive;
29. 'Ozone depletion substances' mean substances listed in the Montreal Protocol on Substances that Deplete the Ozone Layer.

¹² Commission Delegated Regulation (EU) 2021/2139 of 4 June 2021 supplementing Regulation (EU) 2020/852 of the European Parliament and of the Council by establishing the technical screening criteria for determining the conditions under which an economic activity qualifies as contributing substantially to climate change mitigation or climate change adaptation and for determining whether that economic activity causes no significant harm to any of the other environmental objectives (OJ L 442, 9.12.2021, p. 1).

¹³ Directive (EU) 2019/1937 of the European Parliament and of the Council of 23 October 2019 on the protection of persons who report breaches of Union law (OJ L 305, 26.11.2019, p. 17).

¹⁴ Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions (integrated pollution prevention and control) (OJ L 334, 17.12.2010, p. 17).

¹⁵ Directive (EU) 2016/2284 of the European Parliament and of the Council of 14 December 2016 on the reduction of national emissions of certain atmospheric pollutants, amending Directive 2003/35/EC and repealing Directive 2001/81/EC (Text with EEA relevance), *OJ L 344, 17.12.2016, p. 1–31*

Formulas

For the purposes of this Annex, the following formulas shall apply:

1. 'GHG emissions' shall be calculated in accordance with the following formula:

$$\sum_n^i \left(\frac{\text{current value of investment}_i}{\text{investee company's enterprise value}_i} \times \text{investee company's Scope}(x) \text{ GHG emissions}_i \right)$$

2. 'Carbon footprint' shall be calculated in accordance with the following formula:

$$\frac{\sum_n^i \left(\frac{\text{current value of investment}_i}{\text{investee company's enterprise value}_i} \times \text{investee company's Scope 1, 2 and 3 GHG emissions}_i \right)}{\text{current value of all investments (€M)}}$$

3. 'GHG intensity of investee companies' shall be calculated in accordance with the following formula:

$$\sum_n^i \left(\frac{\text{current value of investment}_i}{\text{current value of all investments (€M)}} \times \frac{\text{investee company's Scope 1, 2 and 3 GHG emissions}_i}{\text{investee company's €M revenue}_i} \right)$$

4. 'GHG intensity of sovereigns' shall be calculated in accordance with the following formula:

$$\sum_n^i \left(\frac{\text{current value of investment}_i}{\text{current value of all investments (€M)}} \times \frac{\text{The country's Scope 1, 2 and 3 GHG emissions}_i}{\text{Gross Domestic Product}_i(\text{€M})} \right)$$

5. 'Inefficient real estate assets' shall be calculated in accordance with the following formula:

$$\frac{((\text{Value of real estate assets built before 31/12/2020 with EPC of C or below}) + (\text{Value of real estate assets built after 31/12/2020 with PED below NZEB in Directive 2010/31/EU}))}{\text{Value of real estate assets required to abide by EPC and NZEB rules}}$$

For the purposes of the formulas, the following definitions shall apply:

6. 'Current value of investment' means the value in EUR of the investment by the financial market participant in the investee company.
7. 'Enterprise value' means the sum, at fiscal year-end, of the market capitalisation of ordinary shares, the market capitalisation of preferred shares, and the book value of total debt and non-controlling interests, without the deduction of cash or cash equivalents.
8. 'Current value of all investments' means the value in EUR of all investments by the financial market participant.
9. 'Nearly zero-energy building (NZEB)', 'primary energy demand (PED)' and 'energy performance certificate (EPC)' shall have the meanings given to them in paragraphs 2, 5 and 12 of Article 2 of Directive 2010/31/EU of the European Parliament and of the Council¹⁶.

¹⁶ Directive 2010/31/EU of the European Parliament and of the Council of 19 May 2010 on the energy performance of buildings (recast) (OJ L 153, 18.6.2010, p. 13)

Table 1

Statement on principal adverse impacts of investment decisions on sustainability factors

Financial market participant Triodos Investment Management B.V. LEI code: 724500C17UZL2NC2DE67

Summary

Triodos Investment Management B.V. LEI code: 724500C17UZL2NC2DE67 considers principal adverse impacts (PAIs) of its investment decisions on sustainability factors. The present statement is the consolidated statement on principal adverse impacts on sustainability factors of Triodos Investment Management.

This statement covers the reference period from 1 January 2024 to 31 December 2024.

As a financial institution with a sole focus on impact investing, Triodos Investment Management offers impact investment solutions across all asset classes for clients seeking to make money work for positive change. Our strategy is built around five interconnected transitions that we deem crucial to transform the economy and society: the energy transition, food transition, resource transition, societal transition and the wellbeing transition. Our mission is to enable and accelerate these vital transitions. We do this by financing change: investing in progressive and sustainable businesses and projects. These investments must demonstrate positive impact and adhere to our strict Triodos Bank Minimum Standards. Furthermore, we do this by changing finance: influencing the financial sector and the shape of the economic system at a national and global level, to help deliver our mission.

The managed portfolio covered in this statement includes three main categories:

1. Impact Private Debt and Equity (IPD&E) (Around EUR 2.2 bn, representing 41% of the assets covered in this statement):
 - Primarily accelerating the Energy Transition: Triodos Energy Transition Europe Fund, Triodos Emerging Markets Renewable Energy Fund
 - Primarily accelerating the Societal Transition: Triodos Microfinance Fund, Triodos Fair Share Fund
 - Primarily accelerating the Food Transition: Triodos Food Transition Europe Fund
 - Multiple Transitions: Triodos Groenfonds, Hivos Triodos Foundation
2. Impact Equities and Bonds (IEB) (Around EUR 3.0 bn, representing 56% of the assets covered in this statement) contributing all to multiple transitions:
 - Global Equities: Triodos Global Equities Impact Fund, Triodos Pioneer Impact Fund, Triodos Future Generations Fund
 - Fixed Income: Triodos Euro Bond Impact Fund, Triodos Sterling Bond Impact Fund
 - Mixed Assets: Triodos Impact Mixed Fund – Defensive, Triodos Impact Mixed Fund – Neutral, Triodos Impact Mixed Fund – Offensive
3. Mandates (Around EUR 0.1 bn, representing 3% of the assets covered in this statement) contributing to multiple transitions.

For our Impact Equities and Bonds investments, data is acquired from a third-party data provider, with coverage ranging from 0% to 100%. Currently, we use proxies for some portfolio companies, which can significantly diverge from last reported figures without clear justification. For our Impact Private Debt & Equity investments, data is collected directly from investees, reviewed internally, and complemented with proxies where available. Data collection remains challenging, especially for indirect investments via Financial Intermediaries and Funds, particularly those operating outside the EU and financing small and medium sized enterprises (SMEs).

2024 results

In line with our investment process, we do not tolerate any significant harm in our portfolios. Based on the 2024 data, we have found no evidence of significant adverse impacts in our portfolios. Our PAI statement details the specific explanations, actions taken, and planned measures to further mitigate any potential adverse impact across all Triodos IM investment activities.

Looking ahead, we will focus on two key actions to minimise adverse impacts.

- First of all, we will continue our engagement with investment companies to advance group-level ambitions on greenhouse gas reduction and biodiversity protection and restoration.
- Second, we continue our engagement with investment companies and third-party data providers to improve data coverage and quality. Related to this topic, we advocate for better reflection of emerging market and impact bond practices in the upcoming update of the SFDR regulation. Beyond reducing adverse impacts, we remain committed to prioritise positive impact in alignment with at least one of our five transition themes for every investment. Additionally, we are developing new impact funds to further support our mission.

Description of the principal adverse impacts on sustainability factors

Please see data tables on *Indicators applicable to investments in investee companies* below.

Indicators applicable to investments in investee companies

Adverse sustainability indicator	Metric	Impact 2024	Impact 2023	Impact 2022	Explanation	Actions taken, and actions planned, and targets set for the next reference period
Climate and other environment-related indicators						
Greenhouse gas emissions	1. GHG emissions	Scope 1 GHG emissions	54,892.03 tonnes of CO2 equivalent Data coverage 81%	77,576.99 tonnes of CO2 equivalent Data coverage 84%	73,824.00 tonnes of CO2 equivalent Data coverage 85%	<p>One of the three pillars of our group-wide climate strategy is to realise real emission reduction on our portfolio. Besides an overall downwards trend, in 2024 two companies with relatively high emissions were removed from the portfolio (sustainable packaging manufacturer and a water and sewage service provider).</p> <p>Largest emitters are in the semiconductors, utilities, chemicals, household products and automobile industries. Triodos IM invests in selected companies in these sectors as they contribute to the energy, resource and wellbeing transitions.</p> <p>Triodos Bank updated its climate strategy during 2025. Short-term reduction targets are increased from a 32% reduction by 2030 versus 2020, to a 42% reduction by 2030.</p> <p>For our Impact Equities and Bonds fund range (SICAV I), dialogue took place with all top five emitters per fund. Also in 2024, engagement with the top 5 emitters per fund is scheduled. In total 53 investee companies of SICAV I were engaged with to improve GHG emissions reduction, target setting, reporting and carbon reduction initiatives. One of the goals of this engagement is to encourage our portfolio companies to set emission targets that are in line with the 1.5°C trajectory, as set out</p>

							<p>by the Science Based Targets initiative. At the end of 2024, 70% of the IEB funds' portfolio by net asset value were aligned with or committed to science-based targets</p> <p>Climate change risks and opportunities were identified and reported in the fund impact reports.</p>
		Scope 2 GHG emissions	47,635.12 tonnes of CO2 equivalent Data coverage 81%	73,921.98 tonnes of CO2 equivalent Data coverage 84%	58,327.40 tonnes of CO2 equivalent Data coverage 85%	See above.	See above.
		Scope 3 GHG emissions	1,827,495.39 tonnes of CO2 equivalent Data coverage 81%	1,522,089.83 tonnes of CO2 equivalent Data coverage 81%	1,836,605.84 tonnes of CO2 equivalent Data coverage 85%	<p>93% of Scope 3 emissions are from Impact Equities and Bonds, and 7% from Impact Private debt and Equity investments</p> <p>In 2024, Triodos made additions to the listed equity portfolio, including companies that enable sustainable transitions in healthcare, agriculture, and energy efficiency but also report relatively high scope 3 emissions.</p> <p>Scope 3 emissions accounting remains methodologically complex and inconsistent across companies. Many estimates rely on proxies, industry averages, or assumptions that can vary</p>	<p>In our engagement we stimulate listed companies to improve reporting and reduction target setting on scope 3 emissions. For our private investments, this relates to food & agriculture and financial inclusion investments. In our European food & agriculture portfolio, we provide carbon accounting software and work closely with our investment companies to track their emissions.</p>

						widely in scope, quality, and comparability. Key challenges include double counting across value chains, lack of standardized, significant data gaps. These limitations mean that year-on-year changes in reported Scope 3 emissions should be interpreted with caution and in context.	
		Total GHG emissions	1,923,074.96 tonnes of CO2 equivalent Data coverage 80%	1,671,509.11 tonnes of CO2 equivalent Data coverage 83%	1,968,767.24 tonnes of CO2 equivalent Data coverage 85%	See above. In addition, approximately one-third of Triodos IM investments are allocated to companies, projects and bonds that contribute to accelerating the Energy and Resource transitions, aiding in mitigating, reducing and sequestering GHG emissions.	See above.
	2. Carbon footprint	Carbon footprint	387.71 tonnes of CO2/m EUR Data coverage 80%	346.45 tonnes of CO2/m EUR Data coverage 83%	354.81 tonnes of CO2/m EUR Data coverage 82%	See above.	See above.
	3. GHG intensity of investee companies	GHG intensity of investee companies	868.02 tonnes of CO2/ mEUR Data coverage: 74%	1107.44 tonnes of CO2/ mEUR Data coverage: 77%	1285.93 tonnes of CO2/ mEUR Data coverage 63%	In terms of intensity the largest contributors were utilities and chemicals. These companies contribute to the energy and resource transitions. Our Impact Equities & Bond funds have a significantly lower GHG intensity compared to their benchmark, e.g. Triodos Global Equity Impact Fund has 53% lower GHG intensity than the	The engagement activities and carbon reduction targets applied are aimed at decreasing carbon intensity over time.

						benchmark. The GHG intensity of investee companies is reduced through successful energy efficiency measures.	
	4. Exposure to companies active in the fossil fuel sector	Share of investments in companies active in the fossil fuel sector	0.8% Data coverage: 80% <i>Please note Triodos excludes fossil fuel exposure above a 5% threshold of company revenues, coverage is below 100% as it not only includes investments but also Funds' liquidity positions. Liquidity and sovereigns are not eligible which explains the coverage below 100%.</i>	0% (0.01%) Data coverage: 96%	0 % Data coverage 85%	Companies with activity related to the production of fossil fuel are excluded from direct investment as per the Triodos Minimum Standards (5% company revenue threshold for conventional oil and gas). Several of the impact equities and bonds funds hold a position in a grid operator. This company still owns one gas power plant, but the revenue is below 1.6% of total revenue. This is below our threshold of 5% for conventional oil and gas. However, in line with SFDR requirements, the calculation is based on a binary yes/no approach. As a result, the entire AuM invested in this entity must be classified as having exposure to fossil fuels, despite the minimal actual involvement. Our investments in Financial Institutions do not derive direct revenues from the fossil fuel industry, and we ensure that the exposure to the sector in their portfolio is marginal (below 5%). For our FI portfolio, this	In 2023, Triodos Bank signed the Fossil Fuel Non-Proliferation Treaty. This Treaty is a global effort to foster international cooperation to accelerate a transition to clean energy for everyone, end the expansion of oil, gas and coal, and wind down existing production in keeping with what science shows is needed to address the climate crisis. Read our insight from COP29 in 2024. As the grid operator (referred to under explanation) belongs to the top 5 emitters, we will continue to engage with the company with the aim to decrease its carbon emissions and we will monitor if it remains below the 5% threshold for conventional oil and gas.

						exposure is below 0.01%.	
	5. Share of non-renewable energy consumption and production	Share of non-renewable energy consumption and non-renewable energy production of investee companies from non-renewable energy sources compared to renewable energy sources, expressed as a percentage of total energy sources	Consumption 66% Data coverage consumption 73% Production 16% Data coverage production 21%	Consumption 65% Data coverage consumption 73% Production 6% Data coverage production 37%	Consumption: 47% Data coverage consumption 66% Production 3% Data coverage production 49%	The share of non-renewable energy consumption is still high as the average global energy mix is still highly dependent on fossil fuels. The coverage for non-renewable energy production is low and mainly for Impact Equities & Bond funds open for further improvement. We carefully select and invest in renewable energy development projects and producers.	For our Impact Equities and Bond product range, the carbon reduction targets applied to the automobiles and pulp & paper sector will aim to decrease carbon intensity over time. This can be improved by further increasing the share of renewable energy consumption and production. During the climate change engagement conversations, we will focus on improved reporting.
	6. Energy consumption intensity per high impact climate sector	Energy consumption in GWh per million EUR of revenue of investee companies, per high impact climate sector	Agriculture, forestry, fishing: 0.00 GWH/m EUR Construction: 0.01 GWH/m EUR Electricity, gas, steam, air conditioning supply: 0.03	Agriculture, forestry, fishing: 0.00 GWH/m EUR Construction: 0.02 GWH/m EUR Electricity, gas, steam, air conditioning supply:	Agriculture, forestry, fishing: 0.40 GWH/m EUR Construction: - Electricity, gas, steam, air conditioning supply: 0.005 GWH/m EUR	Triodos IM does not invest in certain high impact climate sectors (e.g. mining) as these are excluded based on our Minimum Standards. The majority of energy consumption intensity is derived from water supply, sewerage, waste management & remediation. This industry is key to support the resource transition.	As part of the engagement on climate change amongst listed entities, increasing the share of renewable energy is also discussed regularly. Targets were set on emissions reduction for the pulp & paper and automotive sector, which can only be achieved through reducing energy consumption intensity. For our Impact Private Debt and Equity product range, we offer

			<p>GWH/m EUR</p> <p>Manufacturing : 0.29 GWH/m EUR</p> <p>Mining, quarrying: -</p> <p>Real Estate: 0.21GWH/m EUR</p> <p>Transportation & storage: 0.34GWH/m EUR</p> <p>Water supply, sewerage, waste management, remediation activities: 0.36 GWH/m EUR</p> <p>Wholesale, retail, trade, repair of motor vehicles, cycles: 0.02 GWH/ m EUR</p> <p>Data coverage for</p>	<p>0.35GWH/m EUR</p> <p>Manufacturing : 0.20 GWH/m EUR</p> <p>Mining, quarrying: 0.03 GWH/m EUR</p> <p>Real Estate: 0.38 GWH/m EUR</p> <p>Transportation & storage: 0.74 GWH/m EUR</p> <p>Water supply, sewerage, waste management, remediation activities: 0.48 GWH/m EUR</p> <p>Wholesale, retail, trade, repair of motor vehicles, cycles: 0.04 GWH/ m EUR</p> <p>Data coverage is 30% for</p>	<p>Manufacturing : 0.88 GWH/m EUR</p> <p>Mining, quarrying: -</p> <p>Real Estate: 0.02 GWH/m EUR</p> <p>Transportation & storage: 0.44 GWH/m EUR 0,44</p> <p>Water supply, sewerage, waste management, remediation activities: 0.01 GWH/m EUR</p> <p>Wholesale, retail, trade, repair of motor vehicles, cycles: 0.00 GWH/ m EUR</p> <p>Data coverage is 30% for</p>	<p>thematic products aimed at the energy transition. In our Food Transition Europe Fund, we provide support to our investment companies to track and reduce their emissions. Energy use is part of this assessment. Real estate investments are selected for their environmental performance, and energy intensity is low.</p>
--	--	--	---	---	--	--

			manufacturing is 30% and for other sectors its 11% or lower.	manufacturing and below 8% for all other sectors	manufacturing and below 1% for all other sectors.		
Biodiversity	7. Activities negatively affecting biodiversity-sensitive areas	Share of investments in investee companies with sites/operations located in or near to biodiversity-sensitive areas where activities of those investee companies negatively affect those areas	1% Data coverage 82%	2% Data coverage 70%	1% Data coverage 57%	Companies with activities that negatively impact biodiversity without appropriate measures are excluded based on our Minimum Standards. For renewable energy projects appropriate assessments are conducted, and necessary mitigation measures are implemented. In emerging markets, we apply the IFC Performance Standards which also relate to biodiversity protection. We also finance agricultural traders and exporters in developing markets. For these investments we check whether the investee has an organic certification, and if not whether they are implementing any mitigating measures, such as farmer training and certification, sustainable sourcing, etc. For investments in FIs, efforts are being made to assess the impact of these institutions' activities on local biodiversity.	In 2023 we started a project to assess and engage with consumer staples companies and their role in tackling plastic pollution by promoting the reducing, re-using and recycling of plastics. In 2024, we met with Danone, Henkel and Procter & Gamble, the three companies in our Impact Equities and Bond portfolios with the highest exposure to plastic pollution. This will be continued in 2025.. In 2024 Triodos Bank published its biodiversity strategy including targets, including to avoid negative impact by engaging with all listed companies exposed to commodities with high-deforestation risk on further limiting deforestation risks, engaging with all chemical companies in our investment portfolio on their biodiversity impact, setting key performance indicators and start mitigating actions on agriculture and built environment loans, and assessing the indirect impact on biodiversity of all financial inclusion funds by the end of 2026.

							Furthermore, Triodos IM is proactively pursuing biodiversity-positive investments focused on nature restoration & conservation, sustainable forestry and smallholder agroecology as well as a targeted engagement project following the group level biodiversity targets..Read more about our biodiversity strategy and about our focus on the topic.
Water	8. Emissions to water	Tonnes of emissions to water generated by investee companies per million EUR invested, expressed as a weighted average	0.02 tonnes/m EUR Data coverage 37%	0.0418 tonnes/m EUR Data coverage 44%	0.0043 tonnes/m EUR Data coverage 48%	Triodos IM has a minimum standard on water scarcity. Companies in water-intensive industries without appropriate measures to reduce their freshwater use are excluded. Absolute emissions to water is therefore low and mostly relates to manufacturing companies that contribute to the resource transition.	Emissions to water continue to be part of the integrated analysis of companies.
Waste	9. Hazardous waste and radioactive waste ratio	Tonnes of hazardous waste and radioactive waste generated by investee companies per million EUR invested, expressed as a weighted average	0.32 tonnes/m EUR Data coverage 81%	0.233 tonnes/m EUR Data coverage 69%	0.35 tonnes/m EUR Data coverage 77%	Triodos IM per its investment approach does not invest in industries that generate hazardous substances. Where a potential risk exists, a minimum standard on hazardous substances is in place to limit potential exposure and to prescribe a mitigating mechanism. This describes amongst others exclusion of companies that produce or sell pesticides or other hazardous substances that form a threat to the wellbeing of humans,	Hazardous chemicals have been a key topic of our company engagement agenda since 2021. In a collaborative effort we encourage chemical companies to phase out hazardous chemicals and transition toward more sustainable solutions. In 2024, we met with chemical companies Akzo Nobel, Evonik, and Shin-Etsu to discuss synthetic, highly toxic per- and polyfluoroalkyl substances, in short: PFAS. Moreover, (hazardous) waste continues to be part of the

						animals and the environment (a thresholds of 5% of company revenue applies and POP involvement is excluded) or that in any other way are involved in controversies, do not respect international agreements or run their businesses in a way that causes serious and irreversible environmental damage.	integrated analysis of companies. Besides that, in 2023 we started a project to assess and engage with consumer staples companies and their role in tackling plastic pollution by promoting the reducing, re-using and recycling of plastics. In 2024, we met with Danone, Henkel and Procter & Gamble, the three companies in our Impact Equities and Bond portfolios with the highest exposure to plastic pollution. This will be continued in 2025.

Indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters

Social and employee matters	10. Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies that have been involved in violations of the UNGC principles or OECD Guidelines for Multinational Enterprises	0% Data coverage 83%	0% Data coverage 80%	0% Data coverage 71%	No violations identified due to strict pre-investment screening and thorough on-site due diligence (for private investments). Besides preventing harm in relation to social and employee matters, our investment solutions proactively target positive change in relation to social inclusion and individual health and wellbeing. Investment examples include the advancement of financial inclusion (Triodos Microfinance Fund; Triodos Fair Share Fund), access to healthy and nutritious food (e.g. Triodos Food Transition Europe Fund), promotion of children's rights (e.g. Triodos Future Generations	Continuous monitoring of violations for all holdings including assessment of severity and remediative measures.
------------------------------------	--	--	-------------------------	-------------------------	-------------------------	---	---

						Fund).	
	11. Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines for Multinational Enterprises	Share of investments in investee companies without policies to monitor compliance with the UNGC principles or OECD Guidelines for Multinational Enterprises or grievance/complaints handling mechanisms to address violations of the UNGC principles or OECD Guidelines for Multinational Enterprises.	28% Data coverage 83%	27% Data coverage: 96%	21% Data coverage 85%	All investments have to comply with the Triodos Bank Minimum Standards which are aligned to the UN Global Compact and the OECD Guidelines for Multinational Enterprises. We do have some exposure as this indicator relates to the availability of policies only. All companies identified as high risk must have policies and/or processes in place to mitigate risk. Beyond what the indicator requires, if the risk level allows, we also focus on practices (when policies are not available) in our due diligence. This is in line with the mentioned guidelines.	As part of continuous monitoring, compliance mechanisms for all holdings are checked.
	12. Unadjusted gender pay gap	Average unadjusted gender pay gap of investee companies	17% Data coverage 32%	16% Data coverage 36%	14% Data coverage 38%	Data coverage remains a topic for improvement in the industry, especially for listed companies.	Part of our engagement plan includes a dialogue with companies to disclose this data. In 2023 and 2024, as part of our Family Friendly Working Policies engagement project , we engaged with companies to , amongst others, report on gender pay gap. In 2025, we will continue with this engagement project. Particularly ,

							the project will focus on key areas like parental leave, breastfeeding support and childcare assistance this year however. Also see explanation PAI 13.
	13. Board gender diversity	Average ratio of female to male board members in investee companies, expressed as a percentage of all board members.	32% Data coverage 64%	30% Data coverage 64%	28% Data coverage 53%	According to our proxy voting guidelines, Triodos votes against the Chairman of the nomination committee if less than one third of the board is female without a satisfactory rationale.	We have assessed policies and exercised voting rights for all investee companies where this was possible. In Private Debt & Equity, we integrated the 2X Criteria, a global baseline standard for gender finance, into our impact performance reporting for Hivos Triodos Fonds, and are in the process of embedding this into our investment process more structurally for additional funds in 2025. Furthermore, we are about to publish our gender strategy paper. On a related note, we manage an engagement project to curb excessive CEO pay and reduce the pay gap in listed companies.
	14. Exposure to controversial weapons (anti-personnel mines, cluster munitions, chemical weapons and biological weapons)	Share of investments in investee companies involved in the manufacture or selling of controversial weapons	0% Data coverage 84% <i>Coverage is below 100% as it the data not only includes investments but also Funds' liquidity positions.</i>	0% Data coverage 96%	0% Data coverage 85%	All involvement in controversial weapons leads to exclusion.	Not relevant.

Indicators applicable to investments in sovereigns and supranationals

Adverse sustainability indicator		Metric	Impact 2024	Impact 2023	Impact 2022	Explanation	Actions taken, and actions planned and targets set for the next reference period
Environmental	15. GHG intensity	GHG intensity of investee countries	0.17KtonCo2/eq/EUR mln Data coverage:2%	0.00 KtonCo2/eq/EUR mln Data coverage: 2%	0.01 KtonCO2/eq /EUR mln Data coverage 2%	Investments in sovereigns are limited as only the Triodos Euro Bond Impact Fund, The Mixed Funds and the Triodos Sterling Bond Impact Fund invest in Sovereigns. Under the Sovereign Framework, every sovereign and sub-sovereign is assessed on whether it ratified the Framework Convention on Climate Change, Kyoto Protocol and Paris Agreement – all aimed at limiting GHG emissions in the atmosphere.	Assessments have been completed for all (sub)sovereigns and will continue to do so in the next reference period. The sovereign investments of the funds are limited to EU member states except for Triodos Sterling Bond Impact Fund that only invests in UK gilts.
Social	16. Investee countries subject to social violations	# of investee countries subject to social violations (absolute and relative # divided by all investee countries), as referred to in international treaties and conventions, UN principles and, where applicable,	0 investee countries and 0% of investee countries Data coverage 2%	0 investee countries and 0% of investee countries Data coverage 2%	0 investee countries and 0% of investee countries Data coverage 2%	Under the Sovereign Framework, every sovereign and sub-sovereign is assessed on international sanctions.	Assessments completed for all (sub)sovereigns and will continue to do so in the next reference period. The sovereign investments of the funds are limited to EU member states except for Triodos Sterling Bond Impact Fund that only invests in UK gilts.

		national law.

Indicators applicable to investments in real estate assets							
Adverse sustainability indicator		Metric	Impact 2024	Impact 2023	Impact 2022	Explanation	Actions taken, actions planned and targets set for the next reference period
Fossil fuels	17. Exposure to fossil fuels through real estate assets	Share of investments in real estate assets involved in the ex-traction, storage, transport or manufacture of fossil fuels	0% Data coverage 100% of direct real estate portfolio	0% Data coverage 100% of direct real estate portfolio	0% Data coverage 100% of direct real estate portfolio	None of the investments are direct investments in real estate assets involved in extraction, storage, transport of manufacture of fossil fuel.	NA
Energy efficiency	18. Exposure to energy-inefficient real estate assets	Share of investments in energy-inefficient real estate assets	0% Data coverage 100% of direct real estate portfolio	0% Data coverage 100% of direct real estate portfolio	0% Data coverage 100% of direct real estate portfolio	Only a limited portion of the Triodos Groenfonds portfolio contains direct investments in real estate assets, however all these investments are in energy efficient real estate assets that have received a Green declaration from the Netherlands Enterprise Agency, which considers at energy performance, materials (sustainable wood) and water usage.	NA

Other indicators for principal adverse impacts on sustainability factors

[Information on the principal adverse impacts on sustainability factors referred to in Article 6(1), point (a) in the format in Table 2]

The mandatory indicators for adverse impact on sustainability factors and two selected (one environmental, one social) optional indicators on sustainability factors are analysed and assessed as part of the overall investment process. Triodos Investment Management selected one environmental optional PAI indicator from Table 2, in particular no. 4: Investments in companies without carbon emission reduction initiatives. For the selection of the optional PAI indicators, the Fund Manager has assessed the degree of relevance and data availability from an entity perspective. Any potential adverse impact is assessed within the context of the fund and the investee. More information is available in the prospectus of the funds. 27% (24% last year) of the reported portfolio does not have carbon emission reduction initiatives in place. The coverage for this indicator is 80%

[Information on the principal adverse impacts on sustainability factors referred to in Article 6(1), point (b), in the format in Table 3]

The mandatory indicators for adverse impact on sustainability factors and two selected (one environmental, one social) optional indicators on sustainability factors are analysed and assessed as part of the overall investment process. Triodos Investment Management selected one social optional PAI indicator from Table 3 of Annex I of the SFDR Delegated Regulation, in particular no. 15: Lack of anti-corruption and anti-bribery policies. For the selection of the optional PAI indicators, the Fund Manager has assessed the degree of relevance and data availability from an entity perspective. Any potential adverse impact is assessed within the context of the Fund and the Investee. More information is available in the prospectus of the funds. 4% (5% last year) of the reported portfolio does not have anti-corruption and bribery policies in place. The coverage for this indicator is 78%.

[Information on any other adverse impacts on sustainability factors used to identify and assess additional principal adverse impacts on a sustainability factor referred to in Article 6(1), point (c), in the format in Table 2 or Table 3]

To select only those investments that do not cause significant harm to any environmental or social sustainable investment objective, every (new) investment is assessed on its alignment with the Triodos Bank Minimum Standards (Minimum Standards) or the Sovereign Framework for sovereign investments. The annex shows a mapping of the coverage of the Minimum Standards to mandatory and optional PAIs. The majority of the PAI indicators are included in the Minimum Standards assessment. Additional PAIs as per the Minimum Standards Assessment¹ relate to:

1. Conflict minerals
2. Genetic engineering
3. Adult entertainment
4. WHO code
5. Animal wellbeing
6. Violation of legislation (covered in SFDR good governance: tax compliance and employee relations)

¹ Please refer to the [Triodos Bank Minimum Standards](#) for more detail:

For significant adverse impact in relation to any of the above subjects, specific criteria as described in the Triodos Bank Minimum Standards apply. These criteria indicate when we exclude companies from investment and under what circumstances exposure is allowed. Besides the above-mentioned overarching principles on preventing and limiting adverse impact, we make use of context specific tools for our sustainability assessment as part of our due diligence.

For example, for our investments in agricultural traders and exporters supplying from small-scale farmers in emerging markets, we adopt a tailor-made framework which covers material sustainability factors including environmental (soil management, agricultural inputs, energy, water, products and certifications), and social dimensions including indicators on workers' rights and training. Examples of additional adverse impacts on sustainability factors assessed include the level of profitability for the supplier farmers, and whether or not the company has conducted (and the result of) any supplier surveys.

For our Financial Inclusion investments, we use our own sustainable business assessment tool, which was developed based on the principles of responsible finance and client protection. This tool includes aspects such as the appropriateness of the product range for the client needs, transparency in client communication, employee matters, code of conduct and gender balance. Examples of additional adverse impacts on sustainability factors assessed include the presence and quality of the financial institution's sustainability strategy, the employee turnover rate, and the real annual percentage rate (APR) of the institution's most commonly used credit product. In 2023 we continued a transition to using ALINUS, alongside the group of impact investors in the Social Performance Task Force (SPTF) working group. ALINUS covers all principles in the Universal Standards for Social and Economic Performance Management, which consider 7 dimensions: Social strategy, committed leadership, client-centred products and services, client protection, responsible human resource development, responsible growth and returns, and environmental performance management. Moreover, the PAI indicators are now included in the ALINUS tool.

Description of policies to identify and prioritise principal adverse impacts on sustainability factors.

[Information referred to in Article 7]

[Our Approach to Impact](#)

At Triodos Investment Management, we believe that how we invest defines the world we want to live in, recognising the instrumental role and creative power of capital when used consciously. As a financial institution, we use money as a driving force towards a society that promotes the quality of life of all its members on a thriving planet, and that has human dignity at its core. We do so for over 30 years already. We have identified five interlinked transitions that we deem crucial to transform the economy and society as a whole: the energy transition, food transition, resource transition, societal transition and the wellbeing transition. Our mission as a financial institution is to enable and accelerate these vital transitions. We do this by financing change: investing in progressive and sustainable businesses and projects, as well as by changing finance: influencing the financial sector and the shape of the economic system at a national and global level, to help deliver our mission.

In practice, financing change means that we invest with a clear intentionality and robust approach to optimise positive impact in relation to the above-mentioned transition themes and to minimise adverse impact. Each potential investment must significantly contribute to the investment fund's sustainability objectives to qualify for investment. These sustainability objectives are rooted in a fund specific theory of change: a description of how Triodos expects investment activities to lead to positive impact and advance the five transitions.

For every investment, a positive impact assessment is followed by a targeted adverse impact screening based on the Triodos Minimum Standards,

potential controversies, international- and sector standards as well as specific PAI indicators that are not yet covered by the above (Due Diligence Framework Policy). The majority of the PAI indicators are included in the Triodos Minimum Standards assessment (appendix). Certain PAI indicators lead to immediate exclusion based on hard quantitative thresholds. The Minimum Standards also prescribe qualitative thresholds for unacceptable adverse impact. Triodos Investment Management considers all mandatory PAIs on sustainability factors as well as two additional (optional) PAI's as described above. The consideration of both mandatory and additional PAIs are incorporated in the due diligence process and in the investment monitoring process. Any investments with significant harm are excluded upfront and checked for regularly and ad hoc during the monitoring phase.

In addition, as a responsible manager of capital, Triodos acts as a steward of people and planet. We invest only in companies that contribute to the transition towards a sustainable society. As an investor, we see it as our duty to act in the best of interest of all stakeholders. We engage with companies and institutions to drive positive change and to minimise adverse impact. Where appropriate, we discuss governance, environmental and social issues relevant to their specific business models. These discussions often already take place before a company is added to the investable universe or to the portfolio, as we assess companies quantitatively and qualitatively for their contribution to our sustainable transition themes and alignment with our minimum standards. We typically address companies with open, constructive dialogue to understand their business proposition and sustainability challenges more deeply. Only if a company has breached or is nearing a breach of our investment criteria, will our engagement become more forceful, and, if deemed unsuccessful, the company will be divested.

Due Diligence Framework Policy

This framework policy sets out the framework for investing, to ensure that Triodos Investment Management and its assets under management meet internal standards and are compliant with requirements on due diligence as required by AIFMD, UCITS or MiFID, which also contain elements for assessment for SFDR purposes. The objective of this policy is to ensure a high standard of due diligence in the selection and ongoing monitoring of investments, and that investment decisions are carried out in compliance with the objectives, the investment strategy and respect the risk limits of the funds.

As Triodos Investment Management invests with a clear intentionality to optimise positive impact, minimise negative impact and as we manage sustainability risks and opportunities, those elements are incorporated in the due diligence process. This means inter alia that ESG factors, impact and sustainability risks are considered. The policy also provides information on elements as required by SFDR such as assessments of PAIs. All funds and portfolios managed by Triodos Investment Management are in scope of this framework policy.

The majority of the PAI indicators as defined in the tables of Annex 1 of the SFDR are included in the Triodos Bank Minimum Standards assessment which is an element in the investment process. The Minimum Standards document, that is aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights, also sets out the minimum standards for employee relations, remuneration, taxes and other corporate governance topics that investees must meet to be eligible for investment. Certain PAI indicators lead to immediate exclusion for Triodos Investment Management.

The PAIs which are not addressed in the Triodos Bank Minimum Standards or Triodos Sovereign Framework, are assessed in the in-depth Due Diligence phase. This can differ per asset class or even per fund. For Impact Equities & Bonds funds and mandates, PAI indicators are assessed during negative screening, controversies research and ESG assessment. For Impact Private Debt & Equity funds and mandates, the data for the PAIs is collected during the due diligence and is based either on information obtained directly from the investee, third-party data providers, third party experts, or public information. In case information is not (yet) available or not feasible to obtain, Triodos Investment Management uses proxy indicators supplied by third-party data providers, with experience in the relevant industry, or ultimately by making reasonable assumptions, all on a best effort basis. When

proxy data is the only data available (country and sector level data), a qualitative assessment of the investee exposure is discussed in the investment proposal. When PAI indicators are not applicable (for example the availability of certain policies for small enterprises), the investment team can apply qualitative assumptions.

This information is captured in the investment proposal. All PAIs are assembled and documented for each investment in a standard format. For the selection of additional PAI indicators, probability of occurrence and severity of impact including their potentially irremediable character the degree of relevance is assessed in relation to the Fund, and data availability from an entity perspective.

Any potentially significant principal adverse impact is assessed within the context of the Fund and the investee. In case no mitigatory measures are possible, the investee is not deemed suitable for investment.

We thereby consider the following data quality order:

1. Direct investee data – audited (can be both collected from investee or via data provider as intermediary)
2. Direct investee data – unaudited (can be both collected from investee or via data provider as intermediary)
3. Proxy data based on sector and country averages
4. Assumptions on the level of exposure and/or based on public information. These assumptions are made due to the nature of the investment and approved by the Triodos Investment Management Impact Management and Measurement Board.

The margin of error is lowest for audited investee data, increases slightly for unaudited investee data and can be relatively high for proxy data. The investment and analyst teams review the data provided and obtained and form a judgement. Mainly in relation to our private investments and emerging market investment, not all datapoints might be readily available from the investee. Besides the best effort alternatives for PAI data collection, we identified PAI data as a strategic engagement topic as of 2023 onwards. The objective is to increasingly collect investee data as well as improving data quality.

Both the assessment and the conclusions of the potential adverse impacts on sustainability factors as well as the positive impact of the Fund's investments are recorded and translated into monitoring and reporting documents in line with the Triodos Investment Management Due Diligence Framework Policy.

Engagement policies

[Information referred to in Article 8]

Triodos Investment Management aims to accelerate and direct transitions through thought leadership, stakeholder dialogues, engagement and advocacy. As such, Triodos Investment Management frequently engages on environmental, social and governance topics that are relevant to each investee's business models, funds or sector context as well as on general corporate development and business strategy issues. Besides engagement conversations, we use proxy voting as an active ownership tool for the Impact Equities & Bonds fund range and mandates and board representation for equity stakes in companies in the Impact Private Debt & Equity fund range and mandates. During the due diligence phase as well as during the monitoring phase, the investment team can determine the need for engagement to minimize adverse impact or to optimize positive impact.

In the investment selection process key opportunities for improvement and for longer term value creation are identified and provide the basis for building trusting relationships with investees. Strategic engagement topics based on specific funds, themes and across all financial products are prepared by a range of department representatives and approved in the Triodos Investment Management Impact Committee.

Engagement activities are monitored and reported upon on an annual basis in the Impact Financial Risk Committee. In the case of (alleged) adverse impact, the investee is contacted to clarify and investigate the allegations or information, and to assess the severity of the incident as well as the responsibility and accountability of the investee. Involvement in a controversy with limited responsibility would lead to expressing a concern and more scrutiny on the topic, whereas involvement in a severe controversy highlighting clear shortcomings would lead to a major concern and decision to divest.

Please refer to our engagement policy for our Impact Equities and Bonds fund range and mandates [here](#) and for our Impact Private Debt and Equity fund range and mandates [here](#). These policies relate to minimising adverse impact, a.o. in relation to the SFDR PAIs as well as to advancing positive impact. The policies are reviewed periodically to ensure they reflect the latest best practices, align with our engagement practice and clearly state our approach in case there is no reduction of adverse impact for a longer period of time.

References to international standards

[Information referred to in Article 9]

Please refer to our [website disclosure](#) for an overview of international standards, network and initiatives we adhere to or support in any other manner. Triodos IM adheres to the following responsible business conduct codes and internationally recognized standards for due diligence and reporting in relation to the PAIs:

- **IFC Performance Standards**

For our Energy transition investments, we adhere to the IFC Performance Standards and / or the Equator Principles in order to manage environmental and social risks and impacts. The IFC Performance Standards address PAI 7: Activities negatively affecting biodiversity sensitive areas, PAI 8: Emissions to water, PAI 9: Hazardous waste ratio, PAI 10: Violations of UNGC principles and OECD Guidelines for MNE. Data is collected directly from the investment projects. Investment teams apply both a backward- and forward-looking lens in their due diligence on such factors. There is no reference to climate scenarios.

- **Science Based Target Initiative (SBTi)**

Science Based Target Initiative (SBTi) validated Triodos Bank's near-term [emission reduction targets](#). This relates to the scope 1, 2 and 3 emissions of Triodos Bank (including subsidiary Triodos Investment Management). In scope 3, the scope 1 and 2 Greenhouse Gas (GHG) emissions of our investment portfolio is captured and hence relates to PAI 1 on GHG emissions. Additionally, we encourage our investees to report on scope 3 and use proxy data where available. The validated science-based near-term targets are part of Triodos Bank's broader [climate strategy](#). This goes beyond the requirements of the Paris Agreement. As part of our climate change engagement for listed investments, we measure two company milestones: 1) a company is committed to setting science-based targets, and 2) a company has set science-based targets, in line with the 1.5°C trajectory. The Science Based Targets initiative (SBTi) data has been retrieved from the SBTi's public database of committed and aligned companies. Targets adopted by companies to reduce greenhouse gas emissions are considered science based if they are in line with what the latest climate science says is necessary to meet the goals of the Paris Climate Agreement – to limit global warming to well below 2°C above pre-industrial levels and pursue efforts to limit warming to 1.5°C. For the monitoring of physical risks we use amongst others ISS-ESG Climate Physical Risk Data – Scenarios which are based on the scenarios of IPCC.

Science-based targets offer companies a clear, actionable path to align emissions reductions with the Paris Agreement goals. Impact Equities & Bond (IE&B) funds engage with companies to set science-based targets. For most IE&B funds we engage with the aim to have at least 85% SBTi coverage by 2035. Read more about our Triodos Bank climate strategy [here](#).

- **PCAF**

At the landmark UN Climate Change Conference in Paris in 2015, Triodos Bank co-signed the Dutch Carbon Pledge to measure and disclose its greenhouse gas emissions, and to ensure these emissions remained in line with the ambitions of the Paris Agreement. The Dutch Carbon Pledge launched the Partnership for Carbon Accounting Financials (PCAF), a collaboration between Dutch financial institutions which has evolved into the Global GHG Accounting and Reporting Standard for the Financial Industry, allowing stakeholders to compare the GHG emissions of banks and other financial institutions.

- **Social Performance Task Force (SPTF) and joint venture of Cerise+SPTF**

Triodos Investment Management is an active contributor to the Social Performance Task Force (SPTF) through the board membership, and participates in the Social Investor Working Group of Cerise+SPTF and support of the industry-wide initiatives that advocate fair pricing and transparency, and promotion of the Client Protection Principles of the Client Protection Pathway as well as sustainability regulatory developments. The Universal Standards for Social and Environmental Performance Management are based on and aligned with the principles laid down in the UNGC, UN Bill of Human Rights, OECD MNE and ILO conventions and as such, they address several PAI, namely PAI 4: Exposure to Fossil Fuel sectors, PAI 10: Violations of UNGC principles and OECD Guidelines for MNEs, PAI 11: Lack of processes and compliance mechanisms to monitor compliance with UNGC and OECD Guidelines for MNEs, PAI 12: Gender pay gap, PAI 13: Board gender diversity, 14 Exposure to controversial weapons. Data is collected directly from the investment projects. Investment teams apply both an ex-ante and ex post lens in their due diligence on such factors. There is no reference to climate scenarios as the initiative is focused primarily on social due diligence topics.

- **UN PRI**

Triodos Investment Management is signatory of the United Nations Principles for Responsible Investment (UN PRI), and reports on our responsible investment activities annually. Based upon the latest UN PRI assessment, Triodos IM scores, overall well above the PRI peers median score. Several questions in the questionnaire relate to PAI's. Examples include carbon intensity, scope 1, scope 2 and scope 3 emissions and OECD guidelines and UN guiding principles on business and human rights.

- **2X Global**

In 2023, Triodos-IM joined 2X Global, a global membership and field-building organization for investors, capital providers, and intermediaries working in public and private markets to advance gender-smart investments and scale the field of gender finance. The 2X Criteria are a set of sector and country-specific thresholds for the share of women represented at various levels in investee companies including ownership, leadership, employment, supply chain, and as users of the end product or service. Investments in companies align with the 2X Criteria if they meet at least one of the Criteria with a time-bound commitment to meeting an additional Criteria, in addition to basic ESG (including safeguarding) and minimum Governance and Accountability requirements. The criteria are now used in reporting for one of our investment strategies, and implementation for all private debt & equity investments is in progress. This relates to PAIs 12: Unadjusted Gender pay gap and PAI 13: Board gender diversity.

Historical comparison

[Information referred to in Article 10]

Whereas some indicators remained relatively stable, several others have quite a significant change. This includes a reduction of the scope 1 and 2

emissions as well as GHG intensity of investee companies for example. Detailed explanation of changes are included in the tables above. Differences can largely be explained by changes in the coverage rate of the data, increased assets under management, engagement efforts and differences in portfolio construction. The conclusion remains the same as in previous years of having no indications for significant adverse impact in our portfolio. We did find some significant differences on individual investment level. Therefore, we will continue our engagement with investment companies and third-party data providers to improve data coverage and quality.

Table 2

Additional climate and other environment-related indicators

Adverse sustainability impact	Adverse impact on sustainability factors(qualitative or quantitative)	Metric
Indicators applicable to investments in investee companies		
Climate and other environment-related indicators		
Emissions	1. Emissions of inorganic pollutants	Tonnes of inorganic pollutants equivalent per million EUR invested, expressed as a weighted average.
	2. Emissions of air pollutants	Tonnes of air pollutants equivalent per million EUR invested, expressed as a weighted average.
	3. Emissions of ozone-depleting substances	Tonnes of ozone-depleting substances equivalent per million EUR invested, expressed as a weighted average.
	4. Investments in companies without carbon emission reduction initiatives	Share of investments in investee companies without carbon emission reduction initiatives aimed at aligning with the Paris Agreement.
	5. Breakdown of energy consumption by type of non-renewable sources of energy	Share of energy from non-renewable sources used by investee companies broken down by each non-renewable energy source.

Energy performance	6. Water usage and recycling	1. Average amount of water consumed by the investee companies (incubic meters) per millionEUR of revenue of investee companies.
Water, waste and material emissions		2. Weighted average percentage of water recycled and reused by investee companies.
	7. Investments in companies without water management policies	Share of investments in investee companies without watermanagement policies.
	8. Exposure to areas of high-water stress	Share of investments in investee companies with sites located in areas of high-water stress without a water management policy
	9. Investments in companies producing chemicals	Share of investments in investee companies the activities of which fall under Division 20.2 of Annex I to Regulation (EC) No 1893/2006.
	10. Land degradation, desertification, soil sealing	Share of investments in investee companies the activities of which cause land degradation, desertification, or soil sealing.
	11. Investments in companies without sustainable land/agriculture practices	Share of investments in investee companies without sustainable land/agriculture practices or policies.
	12. Investments in companies without sustainable oceans/seas practices	Share of investments in investee companies without sustainable oceans/seas practices or policies.
	13. Non-recycled waste ratio	Tonnes of non-recycled waste generated by investee companies per million EUR invested, expressed as a weighted average.
	14. Natural species and protected areas	1. Share of investments in investee companies whose operations affect threatened species. 2. Share of investments in investee companies without a biodiversity protection policy covering operational sites owned, leased, managed in, or adjacent to, a protected area or an area of high biodiversity value outside

		protected areas.
	15. Deforestation	Share of investments in companies without a policy to address deforestation.
Green securities	16. Share of securities not issued under Union legislation on environmentally sustainable bonds	Share of securities in investments not issued under Union legislation on environmentally sustainable bonds.
Indicators applicable to investments in sovereigns and supnationals		
Green securities	17. Share of bonds not issued under Union legislation on environmentally sustainable bonds	Share of bonds not issued under Union legislation on environmentally sustainable bonds.
Indicators applicable to investments in real estate assets		
Greenhouse gas emissions	18. GHG emissions	Scope 1 GHG emissions generated by real estate assets.
		Scope 2 GHG emissions generated by real estate assets.
		Scope 3 GHG emissions generated by real estate assets
		Total GHG emissions generated by real estate assets
Energy consumption	19. Energy consumption intensity	Energy consumption in GWh of owned real estate assets per square meter.
Waste	20. Waste production in operations	Share of real estate assets not equipped with facilities for waste sorting and not covered by a waste recovery or recycling contract.

Resource consumption	21. Raw materials consumption for new construction and major renovations	Share of raw building materials (excluding recovered, recycled and bio-sourced) compared to the total weight of building materials used in new construction and major renovations.
Biodiversity	22. Land artificialisation	Share of non-vegetated surface area (surfaces that have not been vegetated in ground, as well as on roofs, terraces and walls) compared to the total surface area of the plots of all assets.

Table 3

Additional indicators for social and employee, respect for human rights, anti-corruption and anti-bribery matters

INDICATORS FOR SOCIAL AND EMPLOYEE, RESPECT FOR HUMAN RIGHTS, ANTI-CORRUPTION AND ANTI-BRIBERY MATTERS		
Adverse sustainability impact	Adverse impact on sustainability factors (qualitative or quantitative)	Metric
Indicators applicable to investments in investee companies		
Social and employee matters	1. Investments in companies without workplace accident prevention policies	Share of investments in investee companies without a workplace accident prevention policy.
	2. Rate of accidents	Rate of accidents in investee companies expressed as a weighted average.
	3. Number of days lost to injuries, accidents, fatalities or illness	Number of workdays lost to injuries, accidents, fatalities or illness of investee companies expressed as a weighted average.

4. Lack of a supplier code of conduct	Share of investments in investee companies without any supplier code of conduct (against unsafe working conditions, precarious work, child labour and forced labour).
5. Lack of grievance/complaints handling mechanism related to employee matters	Share of investments in investee companies without any grievance/complaints handling mechanism related to employee matters.
6. Insufficient whistle blower protection	Share of investments in entities without policies on the protection of whistle blowers.
7. Incidents of discrimination	1. Number of incidents of discrimination reported in investee companies expressed as a weighted average.

		2. Number of incidents of discrimination leading to sanctions in investee companies expressed as a weighted average.
	8. Excessive CEO pay ratio	Average ratio within investee companies of the annual total compensation for the highest compensated individual to the median annual total compensation for all employees (excluding the highest-compensated individual).
Human Rights	9. Lack of a human rights policy	Share of investments in entities without a human rights policy.
	10. Lack of due diligence	Share of investments in entities without a due diligence process to identify, prevent, mitigate and address adverse human rights impacts.
	11. Lack of processes and measures for preventing trafficking in human beings	Share of investments in investee companies

		without policies against trafficking in human beings.
	12. Operations and suppliers at significant risk of incidents of child labour	Share of investments in investee companies exposed to operations and suppliers at significant risk of incidents of child labour in terms of geographic areas or type of operation.
	13. Operations and suppliers at significant risk of incidents of forced or compulsory labour	Share of the investments in investee companies exposed to operations and suppliers at significant risk of incidents of forced or compulsory labour in terms in terms of geographic areas and/or type of operation.
	14. Number of identified cases of severe human rights issues and incidents	Number of cases of severe human rights issues and incidents connected to investee companies on a weighted average basis.
Anti-corruption and anti-bribery	15. Lack of anti-corruption and anti-bribery policies	Share of investments in entities without policies on anti-corruption and anti-bribery consistent with the United Nations Convention against Corruption.

	16. Cases of insufficient action taken to address breaches of standards of anti-corruption and anti-bribery	Share of investments in investee companies with identified insufficiencies in actions taken to address breaches in procedures and standards of anti-corruption and anti-bribery.
	17. Number of convictions and amount of fines for violation of anti-corruption and anti-bribery laws	Number of convictions and amount of fines for violations of anti-corruption and anti-bribery laws by investee companies
Indicators applicable to investments in sovereigns and supranationals		
Social	18. Average income inequality score	The distribution of income and economic inequality among the participants in a particular economy including a quantitative indicator explained in the explanation column.

	19. Average freedom of expression score	Measuring the extent to which political and civil society organisations can operate freely including a quantitative indicator explained in the explanation column.
Human rights	20. Average human rights performance	Measure of the average human right performance of investee countries using a quantitative indicator explained in the explanation column.
Governance	21. Average corruption score	Measure of the perceived level of public sector corruption using a quantitative indicator explained in the explanation column.
	22. Non-cooperative tax jurisdictions	Investments in jurisdictions on the EU list of non-cooperative jurisdictions for tax purposes.
	23. Average political stability score	Measure of the likelihood that the current regime will be overthrown using force using a quantitative indicator explained in the explanation column.

	24. Average rule of law score	Measure of the level of corruption, lack of fundamental rights, and the deficiencies in civil and criminal justice using a quantitative indicator explained in the explanation column.
--	-------------------------------	--

Appendix

The majority of the PAI indicators are included in the Triodos Bank Minimum Standards assessment. Certain PAI indicators lead to immediate exclusion. We do not apply hard quantitative thresholds other than the exclusionary thresholds. The minimum standards do prescribe qualitative thresholds for unacceptable adverse impact. This appendix provides a mapping of the Triodos assessment criteria that relate to one or multiple PAIs as well as the threshold that applies.

Triodos Investment Management considers all mandatory PAIs on sustainability factors. Moreover, Triodos Investment Management has selected two additional (optional) indicators, one climate and environmental related indicator from Table 2 (no. 4: Investments in companies without carbon emission reduction initiatives) and one indicator from Table 3 on social and employee matters, respect for human rights, anti-corruption and anti-bribery below (no. 15: Lack of anti-corruption and anti-bribery policies). Depending on the fund, data might be available on other additional PAIs.

2. Controversies: Every (potential) investee is assessed on violations of UN Global Compact and OECD Guidelines for Multinational Enterprises on a case-by-case basis considering violations in the last three years. Per case, the verification of information, severity and company response are considered to conclude if a case is low, medium or high concern. In case a company is involved in severe and/or frequent violations without taking credible remediation measures, "high concern" is concluded, and the investee is excluded from investment.

Triodos assessment	SFDR PAI	Threshold
Controversies	10 (Violations of UN Global Compact principles and OECD Guidelines)	Significant violations of UN Global Compact or OECD Guidelines within the last 3 years
	11 (Lack of processes and compliance mechanisms to monitor compliance with UN Global Compact principles and OECD Guidelines)	
	S7 (Incidents of discrimination)	
	S14 (Number of severe human rights issues and incidents)	
	S16 (Cases of insufficient action with breaches of anti-corruption)	
	S17 (Convictions and fines for anti-corruption)	

3. ESG assessment: By combining our proprietary materiality map, highlighting material ESG issues per industry, with an understanding of the company's actual business activities, the risk that an investee inflicts negative impacts on these ESG issues is assessed. Based on the risk classification (low, medium or high risk), the company must meet additional requirements such as having sustainability programs, reporting, certifications, policies or practices in place. In case a company does not meet these requirements but is in transition, it is flagged for engagement. The PAI indicators are considered on an absolute basis, over time and compared to five peers (where relevant). Taking all of the above into consideration, a company's practices are assessed as low, medium or high concern. If "high concern" is concluded, the investee is excluded from investment.

Triodos ESG issue		SFDR PAI	Threshold
Environmental	Climate change	1 (GHG emissions) 2 (Carbon footprint) 3 (GHG intensity) 5 (Share of non-renewable energy consumption and production) 6 (Energy consumption intensity) E4 (Companies without carbon reduction initiatives) E5 (Energy consumption per non-renewable energy source)	High risk for climate change without GHG emissions reporting and Paris-aligned reduction targets; Significant controversies
	Water	E6 (Water usage and recycling) E7 (Investments in companies without water management policies) E8 (Exposure to areas of high water stress)	High risk for water scarcity without activities to reduce freshwater use; Significant controversies
	Waste	E13 (Non-recycled waste ratio)	Significant controversies
	Pollution	8 (Emissions to water) 9 (Hazardous and radioactive waste ratio) E2 (Emissions of air pollutants)	Significant controversies
	Ecosystems	7 (Activities negatively affecting biodiversity) E11 (Companies without sustainable land/ agriculture practice) E12 (Companies without sustainable oceans/ seas practice) E15 (Deforestation)	High risk for biodiversity, deforestation, cotton, soy, palm oil or fishery without relevant policies, programs and measures promoting sustainable activities; Significant controversies
Social	Human rights & community	S9 (Lack of human rights policy) S10 (Lack of human rights due diligence)	High risk for human rights or conflict minerals without relevant policy and practices; Significant controversies
	Labour practices	S1 (Companies without workplace accident prevention policies) S2 (Rate of accidents) S3 (Numbers of days lost to injuries, accidents, fatalities or illness) S4 (Lack of supplier code of conduct) 12 (Unadjusted gender pay gap) S5 (Lack of grievance/complaints mechanism for employee matters) S12 (Operations and suppliers at significant risk of child labour) S13 (Operations and suppliers at significant risk of forced labour)	High risk for labour rights without relevant policies, targets and monitoring; Significant controversies

	Supply chain management	S12 (Operations and suppliers at significant risk of child labour) S13 (Operations and suppliers at significant risk of forced labour)	High risk for labour rights in the supply chain without relevant policies, targets and monitoring; Significant controversies
Governance	Corporate governance	13 (Board gender diversity) S8 (Excessive CEO pay ratio)	CEO pay ratio exceeding 100:1 and size-adjusted absolute CEO pay exceeding €2.5 mln in the last 5 years; Significant controversies
	Business ethics	S15 (Lack of anti-corruption and anti-bribery policies) S6 (Insufficient whistleblower protection)	Significant controversies

The PAI assessment is based on data provided by external parties (third-party ESG data provider, public information and/or investee company).
